The Human Relationship with Nature Peter H. Kahn, 1999 Winner of Outstanding Book Award 2000 Moral Development and Education American Educational Research Association Winner of the 2000 Book Award from the Moral Development Education Group of the American Educational Research Association Urgent environmental problems call for vigorous research and theory on how humans develop a relationship with nature In a series of original research projects Peter Kahn answers this call For the past eight years Kahn has studied children young adults and parents in diverse geographical locations ranging from an economically impoverished black community in Houston to a remote village in the Brazilian Amazon In these studies Kahn seeks answers to the following questions How do people value nature and how do they reason morally about environmental degradation Do children have a deep connection to the natural world that gets severed by modern society Or do such connections emerge if at all later in life with increased cognitive and moral maturity How does culture affect environmental commitments and sensibilities Are there universal features in the human relationship with nature Kahn's empirical and theoretical findings draw on current work in psychology biology environmental behavior education policy and moral development This scholarly yet accessible book will be of value to practitioners in the social science and environmental fields as well as to informed generalists interested in environmental issues and children The Human Relationship with Nature Peter H. Kahn (Jr.), 2001 In a series of original research projects Kahn has studied how humans develop a relationship with nature trying to establish how people value nature and whether children have a natural Children and Nature Peter H. Kahn, Jr., Stephen R. Kellert, 2002-05-03 For or developed connection to the natural world much of human evolution the natural world was one of the most important contexts of children's maturation Indeed the experience of nature was and still may be a critical component of human physical emotional intellectual and even moral development Yet scientific knowledge of the significance of nature during the different stages of childhood is sparse This book provides scientific investigations and thought provoking essays on children and nature Children and Nature incorporates research from cognitive science developmental psychology ecology education environmental studies evolutionary psychology political science primatology psychiatry and social psychology. The authors examine the evolutionary significance of nature during childhood the formation of children's conceptions values and sympathies toward the natural world how contact with nature affects children's physical and mental development and the educational and political consequences of the weakened childhood experience of nature in modern society Ecopsychology Peter H. Kahn, Jr., Patricia H. Hasbach, 2012-07-20 An ecopsychology that integrates our totemic selves our kinship with a more than human world with our technological selves We need nature for our physical and psychological well being Our actions reflect this when we turn to beloved pets for companionship vacation in spots of natural splendor or spend hours working in the garden Yet we are also a technological species and have been since we fashioned tools out of stone Thus one of this century s central

challenges is to embrace our kinship with a more than human world our totemic self and integrate that kinship with our scientific culture and technological selves This book takes on that challenge and proposes a reenvisioned ecopsychology Contributors consider such topics as the innate tendency for people to bond with local place a meaningful nature language the epidemiological evidence for the health benefits of nature interaction the theory and practice of ecotherapy Gaia theory ecovillages the neuroscience of perceiving natural beauty and sacred geography Taken together the essays offer a vision for human flourishing and for a more grounded and realistic environmental psychology The Rediscovery of the Wild Peter H. Kahn (Jr.), Patricia H. Hasbach, 2013 A compelling case for connecting with the wild for our psychological and physical well being and to flourish as a species We often enjoy the benefits of connecting with nearby domesticated nature a city park a backyard garden But this book makes the provocative case for the necessity of connecting with wild nature untamed unmanaged not encompassed self organizing and unencumbered and unmediated by technological artifice We can love the wild We can fear it We are strengthened and nurtured by it As a species we came of age in a natural world far wilder than today s and much of the need for wildness still exists within us body and mind The Rediscovery of the Wild considers ways to engage with the wild protect it and recover it for our psychological and physical well being and to flourish as a species The contributors offer a range of perspectives on the wild discussing such topics as the evolutionary underpinnings of our need for the wild the wild within including the primal passions of sexuality and aggression birding as a portal to wildness children s fascination with wild animals wildness and psychological healing the shifting baseline of what we consider wild and the true **For the Wild** Sarah M. Pike, 2017-10-03 For the Wild explores the ways in which the commitments work of conservation of radical environmental and animal rights activists develop through powerful experiences with the more than human world during childhood and young adulthood The book addresses the guestion of how and why activists come to value nonhuman animals and the natural world as worthy of protection Emotions and memories of wonder love compassion anger and grief shape activists protest practices and help us understand their deep rooted dedicaztion to the planet and its creatures Drawing on analyses of activist art music and writings as well as interviews and participant observation in activist communities Sarah M Pike delves into the sacred duties of these often misunderstood and marginalized groups with openness and sensitivity <u>Identity and the Natural Environment</u> Susan Clayton, 2003-11-07 The often impassioned nature of environmental conflicts can be attributed to the fact that they are bound up with our sense of personal and social identity Environmental identity how we orient ourselves to the natural world leads us to personalize abstract global issues and take action or not according to our sense of who we are We may know about the greenhouse effect but can we give up our SUV for a more fuel efficient car Understanding this psychological connection can lead to more effective pro environmental policymaking Identity and the Natural Environment examines the ways in which our sense of who we are affects our relationship with nature and vice versa This book brings together cutting edge work on the topic of identity and the

environment sampling the variety and energy of this emerging field but also placing it within a descriptive framework These theory based empirical studies locate environmental identity on a continuum of social influence and the book is divided into three sections reflecting minimal moderate or strong social influence Throughout the contributors focus on the interplay between social and environmental forces as one local activist says We don't know if we're organizing communities to plant trees or planting trees to organize communities Wildlife Tourism David Newsome, Ross K. Dowling, Susan A. Moore, 2005-07-22 This book is a landmark contribution to the rapidly growing field of wildlife tourism especially in regard to its underpinning foundations of science conservation and policy Written by a number of environmental and biological scientists it explains the synergy between wildlife and tourism by drawing on their global experiences Interior Design Jo Ann Asher Thompson, Nancy Blossom, 2015-02-09 The Handbook of Interior Design explores ways of thinkingthat inform the discipline of interior design It challenges readers to consider the connections within theory research and practice and the critical underpinnings that have shaped interior design Offers a theory of interior design by moving beyond adescriptive approach to the discipline to a why and how study ofinteriors Provides a full overview of the most current Interior Designresearch and scholarly thought from around the world Explores examples of research designs and methodological approaches that are applicable to interior design upper divisionand graduate education courses Brings together an international team of contributors including well established scholars alongside emerging voices in the field reflecting mature and emergent ideas research and philosophies in the field Exemplifies where interior design sits in its maturation as adiscipline and profession through inclusion of diverse authors topics and ideas **Drawing for Science Education** Phyllis Katz, 2017-03-23 This book argues for the essential use of drawing as a tool for science teaching and learning The authors are working in schools universities and continual science learning CSL settings around the world They have written of their experiences using a variety of prompts to encourage people to take pen to paper and draw their thinking sometimes direct observation and in other instances their memories. The result is a collection of research and essays that offer theory techniques outcomes and models for the reader Young children have provided evidence of the perceptions that they have accumulated from families and the media before they reach classrooms Secondary students describe their ideas of chemistry and physics Teacher educators use drawings to consider the progress of their undergraduates understanding of science teaching and even their moral ethical responses to teaching about climate change Museum visitors have drawn their understanding of the physics of how exhibit sounds are transmitted A physician explains how the history of drawing has been a critical tool to medical education and doctor patient communications Each chapter contains samples insights and where applicable analysis techniques The chapters in this book should be helpful to researchers and teachers alike across the teaching and learning continuum. The sections are divided by the kinds of activities for which drawing has historically been used in science education An instance of observation Audubon Linnaeus A process how plants grow over

Hallström, Nicholas P. Guehlstorf, Margot W. Parkes, 2015-05-01 The modern world has created complex systems that have interrelated concerns Ecosystems Society and Health presents new perspectives on how the challenges relating to these concerns must be examined not as disparate political narratives but as dynamic transformational stories that demand integrative systems of research analysis practice and action Struggles over healthy watersheds diseases associated with environmental change and public health impacts of unsafe food exemplify the demand for integrated understanding and action Contributors argue that traditional science power politics and linear ideals of public policy are inadequate to address sustainability justice safety and responsibility Drawing from a series of case studies that range from nursing to watershed management to environmental health and risk communication this collection strikes an informed balance between practical lessons and a sophisticated theoretical context with which to interpret them Demonstrating the diverse contextual understanding demanded by today s complex issues Ecosystems Society and Health is a timely resource with guidance for practitioners researchers and educators The Future of Life Edward O. Wilson, 2003-03-11 Eloquent practical and wise this book by one of the world's most important scientists and two time Pulitzer Prize winner should be read and studied by anyone concerned with the fate of the natural world It makes one thing clear we know what we do and we have a choice The New York Times Book Review E O Wilson assesses the precarious state of our environment examining the mass extinctions occurring in our time and the natural treasures we are about to lose forever Yet rather than eschewing doomsday prophesies he spells out a specific plan to save our world while there is still time His vision is a hopeful one as economically sound as it is environmentally necessary
