Humanscape Environments For People:

Humanscape Rachel Kaplan, Stephen Kaplan, 1978 **Behavior and the Natural Environment** Irwin Altman, Joachim F. Wohlwill, 2012-12-06 The theme of the present volume concerns people's response to the natural environment considered at scales varying from that of a household plant to that of vast wilderness areas. Our decision to focus on this particular segment of the physical environment was prompted in part by the intrinsic interest in this subject on the part of a diverse group of social scientists and professionals and of laypersons for that matter and in part by the relative neglect of this topic in standard treatments of the environment-behavior field. It also serves to bring out once again the interdisciplinary nature of that field and we are pleased to have been able to include representatives from geography, sociology, social ecology, and natural recreation among our contributors. We believe that this volume will serve a useful purpose in helping to integrate the findings and concepts in this presently somewhat fragmented field scattered as they are over a very diverse array of publications representing a similarly varied group of specialties. It is hoped that the result will be to stimulate future development of this area and to add a measure of increased coherence to it. Volume 7 of our series will be devoted to the theme of elderly people and the environment with M. Powell Lawton joining us as guest co-editor. The titles of the papers comprising Volume 7 are shown on page v. Irwin Altman, Joachim F. Wohlwill, ix. Contents. Introduction. **Environmental Simulation** R.W. Marans, Daniel Stokols, 2013-06-29 This volume is intended to provide an overview and scholarly analysis of state-of-the-art developments within the field of environmental simulation research. Environmental simulation involves the presentation of scale model, previews, full-scale mock-ups, and computer images of planned environments and activities taking place within them to designers and to prospective users of those settings. Environmental simulations are undertaken for many purposes including 1) the training of environmental design students and professionals, 2) the assessment of people's environmental preferences, and 3) the incorporation of observers' assessments of simulated settings into the planning, design, and renovation of actual environments to maximize the degree of fit between occupants' needs and the arrangement of their physical surroundings. Environmental simulation research has expanded rapidly during the past two decades as the result of increasing collaboration between behavioral and social scientists, environmental designers, and professional planners. During this period, alternative conceptual and methodological approaches to environmental simulation have emerged, and numerous programs of simulation research have been initiated worldwide. To date, however, no attempt has been made to present a comprehensive review and assessment of these research developments and an analysis of their implications for design and public policy. Accordingly, the major objectives of this volume are to provide an overview of key conceptual and methodological advances within the field of environmental simulation research and to place these diverse developments within a broader scientific and public policy context. **Environmental Aesthetics** Jack L. Nasar, 1992-07-31 How do people react to the visual character of their surroundings? What can planners do to improve the aesthetic quality of these surroundings? Too

often in environmental design visual quality aesthetics is misunderstood as only a minor concern dependent on volatile taste and thus undefinable Yet a substantial body of research indicates the importance of visual quality in the environment to the public and has uncovered systematic patterns of human response to visual attributes of the built environment Efforts to understand environmental aesthetics have been undertaken by investigators from such diverse fields as landscape architecture environmental psychology geography philosophy architecture and city planning As a result the relevant information is scattered and not readily available to professionals and policy makers The book brings together classic and new contributions by distinguished workers in different disciplines It explores theory and data on preferences in the visual environment and also addresses the practical application of aesthetic criteria in design planning and public policy Promising directions for future research are identified *Proceedings*, 1983

Environmental Planning for Site Development Anne Beer, Cathy Higgins, 2004-03-01 Environmental planning forms the basis of all site development decisions and deals with the factors that must be considered before a site plan can be drawn up Environmental Planning for Site Development emphasizes the man nature interface and explains how nature limits and controls what can happen on every piece of land The text is clearly set out and will help the reader understand exactly what information is needed for a site planning proposal The book includes a live case study to demonstrate how GIS systems are now assisting in the design and decision process as communities increasingly participate in local decisions Local Agenda 21
