Knowledge Engineering John Debenham, 2012-12-06 This monograph describes a methodology for the design of knowledge based systems A knowledge based system contains knowledge as well as information and data The information and data in such a system can be modelled and implemented as a database The knowledge in such a system can be implemented either in a programming language or in an expert systems shell This methodology has two distinguishing features First it is unified A unified methodology represents the data information and knowledge in a homogeneous manner as well as the relationships between them Second the methodology builds a maintenance mechanism into the design In knowledge engineering terms the representation used by this methodology to model knowledge bases applies equally to databases In database terms the representation used by this methodology to model databases applies equally to the database rules The unified methodology unifies the design of the knowledge base component and the database component Unification is achieved in five senses

Intelligent Information Systems 2002 Mieczyslaw A. Klopotek, Slawomir Wierzchon, Maciej Michalewicz, 2013-11-11 This volume contains articles accepted for presentation during The Intelligent Information Systems Symposium IIS 2002 which was held in Sopot Poland on June 3-6 2002 This is eleventh in the order symposium organized by the Institute of Computer Science of Polish Academy of Sciences and devoted to new trends in broadly understood Artificial Intelligence The meetings started back to 1992 With small initial audience workshops in the series grew to an important meeting of Polish and foreign scientists working at the universities in Europe Asia and the Northern America Over years the workshops transformed into regular symposia devoted to latest trends in such fields like Machine Learning Knowledge Discovery Natural Language Processing Knowledge Based Systems and Reasoning and Soft Computing i.e. Fuzzy and Rough Sets Bayesian Networks Neural Networks and Evolutionary Algorithms At present about 50-60 papers are accepted each year Besides for several years now the symposia are accompanied by a number of tutorials given by the outstanding scientists in their domain The main topics of this year symposium included decision trees and other classifier systems neural network and biologically motivated systems clustering methods handling imprecision and uncertainty deductive distributed and agent based systems We were pleased to see the continuation of the

last year trend towards an increase in the number of co operative contributions and in the number and diversity of practical applications of theoretical research

, Information Systems for Urban Planning Robert Laurini, 2018-10-08 Urban planners who need to design information systems require an understanding of systems analysis data acquisition and GIS In recent times the need has been to make computer based maps by using a GIS but planners now need tools for co operative work using groupware systems for global visualization and real time monitoring of urban activities and phenomena Planners have moved beyond drawing land use plans to examining the evolution of urban activities to monitor and analyze urban societal and environmental problems Both practitioners and students will find this book useful provided they have an adequate grounding in computing data analysis and GIS and they are looking to use and design computer systems for developing maps and written statements for city planning Therefore novel tools like using multimedia information systems and GIS will become an increasingly important eventually essential part of the job

Fundamentals of Spatial Information Systems Robert Laurini, Derek Thompson, 1992-03-09 The study and application of spatial information systems have been developed primarily from the use of computers in the geosciences These systems have the principle functions of capturing storing representing manipulating and displaying data in 2 D and 3 D worlds This book approaches its subject from the perspectives of informatics and geography presenting methods of conceptual modeling developed in computer science that provide valuable aids for resolving spatial problems This book is an essential textbook for both students and practitioners It is indispensable for academic geographers computer scientists and the GIS professional Serves as the first comprehensive textbook on the field of Spatial Information Systems also known as Geographic Information Systems Contains extensive illustrations Presents numerous detailed examples
