## **Knowledge Of Water:**

The Secret Knowledge of Water Craig Childs, 2008-12-14 Naturalist Craig Childs's utterly memorable and fantastic study of the desert's dangerous beauty is based on years of adventures in the deserts of the American West. Washington Post. Like the highest mountain peaks, deserts are environments that can be inhospitable even to the most seasoned explorers. Craig Childs, who has spent years in the deserts of the American West as an adventurer, a river guide, and a field instructor in natural history, has developed a keen appreciation for these forbidding landscapes: their beauty, their wonder, and especially their paradoxes. His extraordinary treks through arid lands in search of water are an astonishing revelation of the natural world at its most extreme. Utterly memorable and fantastic. Certainly no reader will ever see the desert in the same way again. Suzannah Lessard, Washington Post.

**The Secret Knowledge of Water** Craig Childs, 2014-05-21 The author of *Crossing Paths* takes on the defining subject of the arid west: water. His odyssey of risk and adventure follows the search for the secretive water of the desert where flows are hidden, ephemeral, sudden, and violent. Line drawings throughout.

Indigenous and Local Water Knowledge, Values and Practices Mrityika Basu, Rajarshi DasGupta, 2023-03-01 This book provides a knowledge base of the existing indigenous and local water knowledge, values, and practices and how this water knowledge can be mainstreamed into the decision-making process. The book not only demonstrates the perks of using indigenous knowledge but also illustrates the barriers and gaps that should be considered while planning for mainstreaming traditional knowledge and values at a local scale. The chapters incorporate case studies from various parts of the world demonstrating how indigenous and religious and cultural values of water have translated into water use and conservation behavior among indigenous people, ensuring resource sustainability over a long period of time. There has been global attention towards combining indigenous and local knowledge with new information and innovation to attain future water security. In this regard, this book is timely, relevant, and significant as it is the first attempt, as far as the best of our knowledge, to publish a book that solely addresses indigenous and local knowledge, values, and practices regarding water management, quality monitoring, use, and conservation. With increasing emphasis on the inclusion of indigenous and local knowledge into natural resource governance and conservation by international agencies like the Intergovernmental Science Policy Platform on Biodiversity and Ecosystem Services (IPBES), the proposed book will significantly contribute to the existing knowledge base and demonstrate the importance of mainstreaming indigenous water knowledge and practices into water governance and decision-making. The UN SDGs, recognizing the significance of indigenous knowledge systems, emphasized its inclusion in most aspects and principles of SDGs. Apart from direct links with SDGs like zero hunger (SDG 2), no poverty (SDG 1), and climate action (SDG 13), indigenous and local knowledge systems are considered to be directly connected to clean water and sanitation (SDG 6). The book will be useful to researchers and students in the field of indigenous knowledge and education, water governance, community-level planning, and water sustainability. The book can be referred to for postgraduate courses and

beyond as well as policymakers conservationists non governmental organizations development practitioners and local government officials

**Water, Knowledge and the Environment in Asia** Ravi Baghel, Lea Stepan, Joseph K.W.

Hill, 2017-03-31 The dramatic transformation of our planet by human actions has been heralded as the coming of the new epoch of the Anthropocene Human relations with water raise some of the most urgent questions in this regard The starting point of this book is that these changes should not be seen as the result of monolithic actions of an undifferentiated humanity but as emerging from diverse ways of relating to water in a variety of settings and knowledge systems With its large population and rapid demographic and socioeconomic change Asia provides an ideal context for examining how varied forms of knowledge pertaining to water encounter and intermingle with one another While it is difficult to carry out comprehensive research on water knowledge in Asia due to its linguistic political and cultural fragmentation the topic nevertheless has relevance across boundaries By using a carefully chosen selection of case studies in a variety of locations and across diverse disciplines the book demonstrates commonalities and differences in everyday water practices around Asia while challenging both romantic presumptions and Eurocentrism Examples presented include class differences in water use in the megacity of Delhi India the impact of radiation on water practices in Fukushima Japan the role of the King in hydraulic practices in Thailand and ritual irrigation in Bali Indonesia
