Knowledge Based Neurocomputing:

Knowledge-based Neurocomputing Ian Cloete, Jacek M. Zurada, 2000 Looking at ways to encode prior knowledge and to extract refine and revise knowledge within a neurocomputing system Neurocomputing methods are loosely based on a model of the brain as a network of simple interconnected processing elements corresponding to neurons These methods derive their power from the collective processing of artificial neurons the chief advantage being that such systems can learn and adapt to a changing environment In knowledge based neurocomputing the emphasis is on the use and representation of knowledge about an application Explicit modeling of the knowledge represented by such a system remains a major research topic The reason is that humans find it difficult to interpret the numeric representation of a neural network The key assumption of knowledge based neurocomputing is that knowledge is obtainable from or can be represented by a neurocomputing system in a form that humans can understand That is the knowledge embedded in the neurocomputing system can also be represented in a symbolic or well structured form such as Boolean functions automata rules or other familiar ways The focus of knowledge based computing is on methods to encode prior knowledge and to extract refine and revise knowledge within a neurocomputing system Contributors C Aldrich J Cervenka I Cloete R A Cozzio R Drossu J Fletcher C L Giles F S Gouws M Hilario M Ishikawa A Lozowski Z Obradovic C W Omlin M Riedmiller P Romero G P J Schmitz J Sima A Sperduti M Spott J Weisbrod J M Zurada

Knowledge-Based Neurocomputing: A Fuzzy Logic Approach Eyal Kolman, Michael Margaliot, 2008-10-18 In this monograph the authors introduce a novel fuzzy rule base referred to as the Fuzzy All permutations Rule Base FARB They show that inferring the FARB using standard tools from fuzzy logic theory yields an input output map that is mathematically equivalent to that of an artificial neural network Conversely every standard artificial neural network has an equivalent FARB The FARB ANN equivalence integrates the merits of symbolic fuzzy rule bases and sub symbolic artificial neural networks and yields a new approach for knowledge based neurocomputing in artificial neural networks

training data Their directed graph structure allows forward or what if inferencing FCM cycles or feedback paths allow for complex nonlinear dynamics Control of FCM nonlinear dynamics can in many cases let the user encode and decode concept patterns as fixed point attractors or limit cycles or perhaps as more exotic dynamical equilibria These global equilibrium patterns are often hidden in the nonlinear dynamics The user will not likely see these global patterns by simply inspecting the local causal edges or nodes of large FCMs

Model Induction from Data Y.B. Dibiike, 2002-01-01 There has been an explosive growth of methods in recent years for learning or estimating dependency from data where data refers to known samples that are combinations of inputs and corresponding outputs of a given physical system The main subject addressed in this thesis is model induction from data for the simulation of hydrodynamic processes in the aquatic environment Firstly some currently popular artificial neural network architectures are introduced and it is then argued that these devices can be regarded as domain knowledge encapsulators by applying the method to the generation of wave equations from hydraulic data and showing how the equations of numerical hydraulic models can in their turn be recaptured using artificial neural networks The book also demonstrates how artificial neural networks can be used to generate numerical operators on non structured grids for the simulation of hydrodynamic processes in two dimensional flow systems and a methodology has been derived for developing generic hydrodynamic models using artificial neural network The book also highlights one other model induction technique namely that of support vector machine as an emerging new method with a potential to provide more robust models

Autonomous Robotic Systems Changjiu Zhou, Darío Maravall, Da Ruan, 2013-03-20 This book contains an edited collection of eighteen contributions on soft and hard computing techniques and their applications to autonomous robotic systems Each contribution has been exclusively written for this volume by a leading researcher The volume demonstrates the various ways that the soft computing and hard computing techniques can be used in different integrated manners to better develop autonomous robotic systems that can perform various tasks of vision perception cognition thinking pattern recognition decision making and reasoning and control amongst others Each chapter of the book is self contained and points out the future direction of research It is a must reading for students and researchers interested in exploring the potentials of the

Neurocomputing Francoise Fogelman Soulie, Jeanny Herault, 2012-12-06 This volume contains the collected papers of the NATO Conference on Neurocomputing held in Les Arcs in February 1989 For many of us this conference was reminiscent of another NATO Conference in 1985 on Disordered Systems 1 which was the first conference on neural nets to be held in France To some of the participants that conference opened in a way the field of neurocomputing somewhat exotic at that time and also allowed for many future fruitful contacts Since then the field of neurocomputing has very much evolved and its audience has increased so widely that meetings in the US have often gathered more than 2000 participants However the NATO workshops have a distinct atmosphere of free discussions and time for exchange and so in 1988 we decided to go for another session This was an casion for me and some of the early birds of the 1985 conference to realize how much and how little too the field had matured
