Entangled Worlds Catherine Keller, Mary-Jane Rubenstein, 2017-08-08 Historically speaking theology can be said to operate materiaphobically Protestant Christianity in particular has bestowed upon theology a privilege of the soul over the body and belief over practice in line with the distinction between a disembodied God and the inanimate world He created Like all other human social and natural sciences religious studies imported these theological dualisms into a purportedly secular modernity mapping them furthermore onto the distinction between a rational enlightened Europe on the one hand and a variously emotional primitive and animist non Europe on the other The new materialisms currently coursing through cultural feminist political and queer theories seek to displace human privilege by attending to the agency of matter itself Far from being passive or inert they show us that matter acts creates destroys and transforms and as such is more of a process than a thing Entangled Worlds examines the intersections of religion and new and old materialisms Calling upon an interdisciplinary throng of scholars in science studies religious studies and theology it assembles a multiplicity of experimental perspectives on materiality What is matter how does it materialize and what sorts of worlds are enacted in its varied entanglements with divinity While both theology and religious studies have over the past few decades come to prioritize the material contexts and bodily ecologies of more than human life Entangled Worlds sets forth the first multivocal conversation between religious studies theology and the body of the new materialism Here disciplines and traditions touch transgress and contaminate one another across their several carefully specified contexts And in the responsiveness of this mutual touching of science religion philosophy and theology the growing complexity of our entanglements takes on a consistent ethical texture of urgency

The Resilience Machine Jim Bohland, Simin Davoudi, Jennifer Lawrence, 2018-10-10 We live in a time where environmental pressures social inequities and political derision are the backdrop of everyday life and where resilience has become a routine prescription for coping with the conditions of modern existence Drawing an analogy to Harvey Molotch's urban growth machine this book explores

different narratives of resilience and their policy and practice manifestations for cities citizens and communities It expands on the metaphor of the machine to show how resilience can be better understood as an assemblage Bringing together authors from multiple disciplines and different parts of the world the book unmask the often invisible effects of resilience strategies by examining ways in which neoliberal mentalities are fed through the rhetoric of resilience practices policies and development projects The contributing essays provide provocative accounts of several areas of inquiry including biopolitics and smart bodies resilient cities and communities urban planning and disaster management justice and vulnerability and resistance to resilience Holding out hope for critical potentials in resilience The Resilience Machine proposes to move beyond mechanisms of adaptation and into imagining what resilient life could look like in a more just equitable and democratic world The Resilience Machine is a current vital addition to resilience community and urban scholarship

From Transnational Relations to Transnational Laws Shaheen Sardar Ali, Anne Griffiths, 2016-04-15 This book approaches law as a process embedded in transnational personal religious communicative and economic relationships that mediate between international national and local practices norms and values It uses the concept living law to describe the multiplicity of norms manifest in transnational moral social or economic practices that transgress the territorial and legal boundaries of the nation state Focusing on transnational legal encounters located in family life diasporic religious institutions and media events in countries like Norway Sweden Britain and Scotland it demonstrates the multiple challenges that accelerated mobility and increased cultural and normative diversity is posing for Northern European law For in this part of the world as elsewhere national law is challenged by a mixture of expanding human rights obligations and unprecedented cultural and normative pluralism enhanced by expanding global communication and market relations As a consequence transnationalization of law appears to create homogeneity fragmentation and ambiguity expanding space for some actors while silencing others Through the lens of a variety of important contemporary subjects the authors thus engage with the nature of power and how it is accommodated ignored or resisted by various actors when transnational practices encounter national and local law
