Group Actions and Invariant Theory Andrzej Białyński-Birula, 1989 This volume contains the proceedings of a conference sponsored by the Canadian Mathematical Society on Group Actions and Invariant Theory held in August 1988 in Montreal. The conference was the third in a series bringing together researchers from North America and Europe, particularly Poland. The papers collected here will provide an overview of the state of the art of research in this area. The conference was primarily concerned with the geometric side of invariant theory, including explorations of the linearization problem for reductive group actions on affine spaces, with a counterexample given recently by J. Schwarz, spherical and complete symmetric varieties, reductive quotients, automorphisms of affine varieties and homogeneous vector bundles.
Algebraic Geometry and Commutative Algebra Hiroaki Hironaka, Heisuke Hironaka, Masaki Maruyama, 2014-05-10 Algebraic Geometry and Commutative Algebra in Honor of Masayoshi Nagata presents a collection of papers on algebraic geometry and commutative algebra in honor of Masayoshi Nagata for his significant contributions to commutative algebra. Topics covered range from power series rings and rings of invariants of finite linear groups to the convolution algebra of distributions on totally disconnected locally compact groups. The discussion begins with a description of several formulas for enumerating certain types of objects which may be tabular arrangements of integers called Young tableaux or some types of monomials. The next chapter explains how to establish these enumerative formulas with emphasis on the role played by transformations of determinantal polynomials and recurrence relations satisfied by them. The book then turns to several applications of the enumerative formulas and universal identity, including enumerative proofs of the straightening law of Doubilet, Rota, Stein, and computations of Hilbert functions of polynomial ideals of certain determinantal loci. Invariant differentials and quaternion extensions are also examined along with the moduli of Todorov surfaces and the classification problem of embedded lines in characteristic p . This monograph will be a useful resource for practitioners and researchers in algebra and geometry.
