Nel-lo, Renata Mele, 2016-02-19 *Cities in the 21st Century* provides an overview of contemporary urban development. Written by more than thirty major academic specialists from different countries, it provides information on and analysis of the global network of cities, changes in urban form, environmental problems, the role of technologies and knowledge, socioeconomic developments, and finally the challenge of urban governance. In the mid 20th century, architect and planner Josep Lluís Sert wondered if cities could survive in the early 21st century; we see that cities have not only survived but have grown as never before. Cities today are engines of production and trade, forges of scientific and technological innovation, and crucibles of social change. Urbanization is a major driver of change in contemporary societies; it is a process that involves acute social inequalities and serious environmental problems but also offers opportunities to move towards a future of greater prosperity, environmental sustainability, and social justice. With case studies on thirty cities in five continents and a selection of infographics illustrating these dynamic cities, this edited volume is an essential resource for planners and students of urbanization and urban change.

*The Cost of Not Educating the World's Poor* Lynn Ilon, 2015-05-15 In *The Cost of Not Educating the World's Poor*, Lynn Ilon observes from her 30 years of travel and work in some 20 developing countries how global instability, problems of environmental degradation, spread of global disease, migration, and political instability are a cost of viewing the uneducated poor as separated from a networked world of fast-growing global knowledge. This book shows how powerful global learning systems are rapidly forming and linking the rich world with the world of the poor and developing nations. Using a narrative voice interleaved with concise introductions to the underlying theories, economics, development, learning, technology, and networks, it shows us how changing our ways of thinking can lead to new possibilities. *The Cost of Not Educating the World's Poor* is based on an emerging theory of development, economics, and the author's own vast experiences and stories. It also discusses, among other issues, international development and how it has evolved toward an emphasis on knowledge. How networked human capital creates new potential for poorly resourced countries. The formation of a global system of learning networks. The digitization of knowledge. How nations improve their well-being through knowledge and equity. This interdisciplinary assessment of international learning inequality and the methods to overcome it will appeal to researchers concerned with emerging concepts of global learning networks and their effects on development. It will also be of interest to students and policymakers studying national inequality, economics, and global development.

**Acid in the Environment** Gerald R. Visgilio, Diana M. Whitelaw, 2007-04-13 The Goodwin Niering Center for Conservation Biology and Environmental Studies at Connecticut College is a comprehensive interdisciplinary program that builds on one of the nation's leading undergraduate environmental studies programs. The Center fosters research, education, and curriculum development aimed at understanding contemporary ecological challenges. One of the major goals of the Goodwin Niering Center involves enhancing the understanding of both the College community and the general public with respect to ecological, political, social, and economic factors that affect natural resource use. To this end, the Center has offered five conferences at which

academicians representatives of federal and state government and individuals from non government environmental organizations are brought together for an in depth interdisciplinary evaluation of important environmental issues On April 1 and 2 2005 the Center presented the Elizabeth Babbott Conant interdisciplinary conference on Acid in the Environment Lessons Learned and Future Prospects The Connecticut Institute of Water Resources at the University of Connecticut the Connecticut Chapter of The Nature Conservancy and the Connecticut Sea Grant College Program joined the Center as conference sponsors During the past twenty five years acid rain formally referred to as acid deposition has been the focus of much political debate and scholarly research Acid deposition occurs when important precursor pollutants such as sulfur dioxide SO<sub>2</sub> and nitrogen oxides NO<sub>x</sub> mix with water vapor and oxidants in the atmosphere and fall back to earth in either wet or dry form
