EPA Journal, 1988 **Facing Global Environmental Change** Hans Günter Brauch, Navnita Chadha Behera, Patricia Kameri-Mbote, John Grin, Úrsula Oswald Spring, Béchir Chourou, Czeslaw Mesjasz, Heinz Krummenacher, 2009-06-04 The year 2007 could perhaps accurately be described as the year when climate change finally received the attention that this challenge deserves globally Much of the information and knowledge that was created in this field during the year was the result of the findings of the Fourth session Report AR4 of the Intergovernmental Panel on Climate Change IPCC which were disseminated on a large scale and reported extensively by the media This was the result not only of a heightened interest on the part of the public on various aspects of climate change but also because the IPCC itself proactively attempted to spread the findings of its AR4 to the public at large The interest generated on the scientific realities of climate change was further enhanced by the award of the Nobel Peace Prize to the IPCC and former Vice President of the US Al Gore By taking this decision in favour of a leader who has done a great deal to create awareness on climate change and a body that assesses all scientific aspects of climate change and disseminates the result of its findings the Norwegian Nobel Committee has clearly

drawn the link between climate change and peace in the world **Environment Betrayed** Edward C. Krug,2012-05-30 In this collection of articles an environmental scientist traces a journey through the wilderness of environmental politics In his travels Dr Edward Krug developed a unique perspective on vital areas of the environmental issues making him critical of both sides of the environmental debate *Environment Betrayed* delves into numerous environmental issues and into environmentalism itself presenting both Dr Krug s opinions and the well documented opinions of others who were active participants in the environmental arena Dr Krug has worked as an environmental scientist since the early eighties and much of the research and information included here originated in the eighties and nineties Despite this gap of time defenders of modern Western civilization don t seem to recognize the nature of the environmental war let alone many of its details By raising issues environmentalists also define the battlefield that is the context of thought Krug cites credible sources on both sides of the debate with varying perspectives on where things stand in this conflict Only by gaining a clear understanding of what s at stake can we truly grasp the numerous environmental issues swirling around us and what they will mean for our future Bonhoeffer's Christocentric Theology and Fundamental Debates in Environmental Ethics Steven C. van den Heuvel,2017-05-04 There is widespread understanding of the close connection between religion and the ecological crisis and that in order to amend this crisis theological resources are needed This monograph seeks to contribute to this endeavor by engaging the theology of Dietrich Bonhoeffer His theology is particularly suitable in this context due to its open ended nature and to the prophetic and radical nature of the questions he was prepared to ask that is why there are many other attempts to contextualize Bonhoeffer s theology in areas that he himself has not directly written about In this monograph Steven van den Heuvel first of all addresses the question of how to translate Bonhoeffer s theology in a methodologically sound way He settles on a modified form of the general method of correlation Then secondly van den Heuvel sets out to describe five major concepts in Bonhoeffer s work bringing these into critical interplay with discussions in environmental ethics and eco theology In making the correlations he thoroughly describes each concept situating it in the historic and intellectual background of Bonhoeffer s time He then transposes these concepts to contemporary environmental ethics describing what contribution Bonhoeffer s theology can make **Environment and Society** Stewart Barr,2016-04-29 *Environment and Society* explores ways to promote the behavioural shifts necessary for creating a sustainable society Through a critical approach to the links between sustainability policy and citizen engagement the book argues that sustainability policy needs to move towards a positive perspective utilizing the well known techniques of segmentation and social marketing Such mainstreaming of sustainable lifestyles is likely to be the only effective means of engaging the majority of citizens in the environmental debate given the major influence of the consumer society on individual aspirations and beliefs Comprised of three substantive elements *Environment and Society* explores the context for behaviour change policy the approaches adopted by politicians and academic researchers and the application of such approaches using empirical data from two major research projects The

book is richly illustrated using both theoretical and empirical data and provides an excellent companion to all researchers interested in sustainable lifestyles

The Environment And Marxism-leninism Joan Debardeleben, 2019-07-11 In the past two decades environmental pollution and natural resource shortages have evoked increasing concern in the Soviet Union and Eastern Europe The emerging ecological crisis has challenged many common assumptions in the Soviet bloc as in the West This book provides for the first time a detailed and comprehensive analysis of the ecology debate in the USSR and its highly industrialized ally the German Democratic Republic GDR Based on a thorough examination of the Soviet and GDR sources Dr DeBardeleben explores the authorities attempts to explain the problem to their populations She also examines the viewpoints of scientists writers and scholars with special attention to economic dimensions of the ecology debate The study reveals the increasing sophistication of specialists in influencing public policy by adapting official values to support their positions Through comparison of the Soviet and East German cases the study clarifies the impact of natural resource endowment and legitimacy dilemmas on treatment of the ecology issue The book demonstrates that Marxist Leninist values subtly affect Soviet and GDR responses but at the same time the environmental crisis is forcing a reevaluation of some aspects of Marxist Leninist theory and ideology itself

The environmental turn in postwar Sweden David Larsson Heidenblad, 2021-09-07 The Stockholm Conference of 1972 drew the world's attention to the global environmental crisis but for people in Sweden the threat was nothing new Anyone who read the papers or watched the television news was already familiar with the issues Five years early in the summer of 1967 the situation was very different So what happened in between This book explores the environmental turn that took place in Sweden in the late 1960s This radical change the realisation that human beings were in the process of destroying their own environment had major and far reaching consequences What was it that opened people's eyes to the crisis When did it happen Who set the ball rolling These are some of the questions the book addresses shedding new light on the history of environmentalism

Environment, Media and Communication Anders Hansen, 2018-09-21 Media and communication processes are central to how we come to know about and make sense of our environment and to the ways in which environmental concerns are generated elaborated manipulated and contested The second edition of Environment Media and Communication builds on the first edition's framework for analysing and understanding media and communication roles in the politics of the environment It draws on the significant and continuing growth and advances in the field of environmental communication research to show the increasing diversification and complexity of environmental communication The book highlights the persistent urgency of analysing and understanding how communication about the

environment is being influenced and manipulated with implications for how and indeed whether environmental challenges are being addressed and dealt with Since the first edition changes in media organisations news media and environmental journalism have continued apace but perhaps more significantly the media technologies and the media and communications landscape have evolved profoundly with the continued rise of digital and social media Such changes have gone hand in hand with and often facilitated enabled and enhanced shifting balances of power in the politics of the environment There is thus a greater need than ever to analyse and understand the roles of mediated public communication about the environment and to ask critical questions about who what benefits and who what is adversely affected by such processes This book will be of interest to students in media communication studies geography environmental studies political science and sociology as well as to environmental professionals and activists **Towards an Environment Research Agenda** A. Winnett, 2002-12-13

concluding chapter features a wide ranging discussion on the future of the debate and of the WTO s Committee on Trade and Environment

Boersema, Lucas Reijnders, 2008-12-12 International experts provide a comprehensive picture of the principles concepts and methods that are applicable to problems originating from the interaction between the living non living environment and mankind Both the analysis of such problems and the way solutions to environmental problems may work in specific societal contexts are addressed Disciplinary approaches are discussed but there is a focus on multi and interdisciplinary methods A large number of practical examples and case studies are presented There is special emphasis on modelling and integrated assessment This book is different because it stresses the societal cultural and historical dimensions of environmental problems The main objective is to improve the ability to analyse and conceptualise environmental problems in context and to make readers aware of the value and scope of different methods Ideal as a course text for students this book will also be of interest to researchers and consultants in the environmental sciences
