Sachsman, JoAnn Myer Valenti, 2020-05-14 The *Routledge Handbook of Environmental Journalism* provides a thorough understanding of environmental journalism around the world. An increasing number of media platforms from newspapers and television to Internet social media networks are the major providers of indispensable information about the natural world and environmental risk. Despite the dramatic changes in the news industry that have tended to reduce the number of full-time newspaper reporters, environmental journalists remain key to bringing stories to light across the globe. With contributions from around the world broken down into five key regions: the United States of America, Europe, Russia, Asia, and Australia, Africa, and the Middle East, and South America, this book provides support for today's environment reporters, the providers of essential news in the 21st century. As a scholarly and journalistic work written by academics and the environmental reporters themselves, this volume is an essential text for students and scholars of environmental communication, journalism, and global environmental issues, more generally, as well as professionals working in this vital area. Some, such as meteorological data, have been organized for weather map display where many thousands of data points are synthesized in one compressed map. Most environmental data, however, are still widely scattered and generally not used for a systems approach but only for the purpose for which they were originally taken. These data are contained in relatively small computer programs, research files, government and industrial reports, etc. This

Conference was called to bring together some of the world's leaders from research centers and government agencies and others concerned with environmental data management. The purpose of the Conference was to organize discussion on the scope of world environmental data, its present form and documentation, and whether a systematic approach to a total system is feasible now or in the future. This same subject permeated indirectly the Stockholm Conference on the environment where, although no single recommendation came forth suggesting a consolidated environmental data pool, bank, or network, each recommendation indicated that substantial environmental data needed to be obtained or needed to be pooled and analyzed from existing data sources.
