Emissions, Pollutants and Environmental Policy in China Bo Miao,2013-09-02 As the world s biggest polluter

the environmental challenges that China faces in controlling its airborne emissions are crucial not only to its own population in terms of tackling the severe domestic air pollution but also to the planet as it faces calls from the international community to accept its responsibilities in cutting greenhouse gases. Deteriorating air quality clearly shows that China's current environmental regime is unsuited to either tackle the rampant domestic air pollution or contribute fairly to international climate action. As such, this book explores the feasibility of applying a national emissions trading system to control multiple air pollutants in China. It begins with an outline of the existing emissions management system and goes on to explore whether a national emissions trading system is a viable choice to combat China's conventional air pollutants. To this end, there is an in-depth analysis of the two pilot sulphur dioxide emissions trading programs in Taiyuan and Jiangsu, as well as an examination of emissions trading schemes in the US and EU. Finally, the book discusses the key design elements of a multi-pollutant cap and trade scheme that addresses both conventional air pollutants and greenhouse gases. This book will be of great interest to students and scholars interested in the fields of environmental studies, Chinese politics, and environmental law. It will also be invaluable to policy makers in the field.

China's Environmental Foreign Relations Heidi Wang-Kaeding, 2021-03-01. Over recent decades China has moved from being a follower towards taking on a leadership role in global environmental governance. This book discusses this important development. It examines the key role of Chinese interest groups showing how, through various domestic dynamics, they have influenced how China has approached issues such as climate change and the environment. Focusing on examples of multilateral environmental treaties, bilateral cooperation, and the proposition of alternative norms, the idea of China as an ecological civilisation, the book provides crucial insights on the evolution of China's approach to international relations and engagement with global environmental governance and contributes to the discussion of what kind of power China is poised to become.

China's environmental policy in terms of European Union

standards Jan Wiktor Tkaczyński, Łukasz Gacek, 2020-11-16 It is beyond dispute that both China and the European Union stand to gain from promoting low carbon development through the dissemination of clean and renewable energy sources as this inevitably leads to increased environmental protection The depletion of fossil fuel resources and the accompanying changes in the global energy mix make Europe and China not only competitors in the global economic race but also *nolens volens* partners Their pragmatic partnership is characterized on the one hand by the need to take action to reduce the consumption of fossil fuels and on the other by the desire to minimize the negative environmental impact of their use Hence the existing and emerging cooperation between the two actors while challenging for a number of reasons is not only an attempt to set up channels to exchange vital information but also an exercise in setting the standards under which further cooperation will be forged
