Geophysics Qingyun Di, Guoqiang Xue, Jianghai Xia, 2017-03-30 This book focuses on essential theories, methods and techniques in the field of environmental and engineering geophysics that can contribute to resource detection and environmental protection. Geophysics has been playing an important role in exploring the earth, locating vital resources and promoting the development of society. This book covers a range of topics including the exploration of modern resources such as ore deposits, coal mines, shale gas and geothermal power, and the monitoring of geological disasters including the rock soil body, ground deformation, mines, specific rock soil engineering disasters, desertification of land and environmental abnormalities. This book not only offers a valuable resource for geophysical researchers, it also demonstrates how geophysics theories and methods can be practically implemented to protect our environment and promote the development of human society.

Environmental and Engineering Geophysics Prem V. Sharma, 1997-11-20 Geophysical imaging methods provide solutions to a wide variety of environmental and engineering problems: protection of soil and groundwater from contamination, disposal of chemical and nuclear waste, geotechnical site testing, landslide and ground subsidence hazard detection, location of archaeological artifacts. This book comprehensively describes the theory, data acquisition and interpretation of all of the principal techniques of geophysical surveying: gravity, magnetic, seismic, self potential, resistivity, induced polarization, electromagnetic ground probing, radar, radioactivity, geothermal and geophysical borehole logging. Each chapter is supported by a large number of richly illustrated case histories. This book will prove to be a valuable textbook for senior undergraduates and postgraduates in environmental and applied geophysics, a supplementary course book for students of geology, engineering geophysics, civil and mining engineering, and a reference work for professional earth scientists, engineers and town planners.
