consumers are so focused on initial costs that they underestimate the effect of operating the energy system over its life. This suboptimization creates a fantastic opportunity to not only make a wise decision financially but also reduce the environmental impact of energy systems. There are three simple tools known to all mechanical engineers that when added to traditional thermodynamics enable an engineer to find the true optimum of an energy system. In this concise book you will be equipped with these tools and will understand how they are applied to cooling systems. The target audiences for this book are mechanical engineering students in their first semester of thermodynamics through engineers with 20 years of experience in the design of cooling systems. First semester thermodynamic students will benefit the most from Appendixes A and C in Chapter 1. The rest of Chapter 1 is written at a level where any undergraduate mechanical engineering student who is taking heat transfer will be able to quickly assimilate the knowledge. This book also has the depth to handle the latent load which will provide the practicing engineer with the tools necessary to handle the complexity of real cooling systems.

**Environmental Studies** B. S. Chauhan, 2008-05 This book is intended to meet the academic requirements of the subject Environmental Studies for undergraduate students in Indian and overseas universities. The contents have been prepared keeping in mind the widest possible variations in the background of the users. The entire UGC syllabus and supplementary materials are in the nine chapters. Chapter 1 describes the multidisciplinary nature of environmental studies. Chapter 2 and 3 comprehensively elaborate the forest, water, minerals, food, energy and land resources. Chapter 4 explains various aspects of biodiversity. Chapter 5 discusses the science of ecology and concepts of ecosystem. Chapter 6 is an exhaustive description of environmental pollution, its sources, effects and control measures. The sustainable development has been discussed in Chapter 7. Issues on environment and health, human rights, AIDS, women, child welfare and role of IT industry have been addressed in great length in Chapter 8. Key features of this book include authentic, simple to the point and latest account of each and every topic besides well sketched illustrations and various case studies. The book also contains glossary of terms which can be of particular use to students with little or no science background and appendices and abbreviations commonly used in describing environmental studies.

Physicochemical Treatment Processes Lawrence K. Wang, Yung-Tse Hung, Nazih K. Shamma, 2007-11-13 The past 30 years have seen the emergence of a growing desire worldwide to take positive actions to restore and protect the environment from the degrading effects of all forms of pollution: air, noise, solid waste and water. Because pollution is a direct or indirect consequence of waste, the seemingly idealistic demand for zero discharge can be construed as an unrealistic demand for zero waste. However, as long as waste exists, we can only attempt to abate the subsequent pollution by converting it to a less noxious form. Three major questions usually arise when a particular type of pollution has been identified: 1. How serious is the pollution? 2. Is the technology to abate it available? and 3. Do the costs of abatement justify the degree of abatement achieved? The principal intention of the Handbook of Environmental Engineering series is to help readers formulate answers to the last two questions. The traditional approach of applying tried and true

solutions to specific pollution problems has been a major contributing factor to the success of environmental engineering and has accounted in large measure for the establishment of a methodology of pollution control. However, realization of the ever increasing complexity and interrelated nature of current environmental problems makes it imperative that intelligent planning of pollution abatement systems be undertaken. **World Conference on Social and Humanities Research (W-SHARE 2022)** Andi Anto Patak, Abdul Hafid

Hasim, 2023-07-14 This is an open access book. The 2nd World Conference on Social and Humanities Research (W-SHARE) was conducted on November 20-21, 2022 in Makassar, Indonesia. W-SHARE, the leading forum for the presentation of proposed research and research results, is organized by Universitas Negeri Makassar (UNM). Universitas Negeri Makassar has been concerning on the pre-service teacher's education. UNM has the capacity to promote Building Resilience; it is the ability to cope and prosper in the face of unfavorable events, obstacles, or adversity. Social competence, responsibility, optimism, hope for the future, attachment to family, self-efficacy, and favorable respect are all important characteristics of resilience in school-aged children and adolescents. UNM, as one of the leading educational universities in Indonesia, can collaborate with schools to enhance resilience through programs which build positive social norms and generate a sense of connectedness to teachers, peers, and the academic goals of the school. The cooperation should provide a program that focuses on improving personal and social capabilities such as self-awareness, self-management, social awareness, and social management using an evidence-based approach. Waste Treatment in the Biotechnology, Agricultural and Food Industries Lawrence K. Wang, Mu-Hao

Sung Wang, Yung-Tse Hung, 2023-11-30 This book and its sister book, Volume 1 of the Handbook of Environmental Engineering (HEE) series, have been designed to serve as a mini-series covering waste treatment in biotechnology, agricultural, and food industries. It is expected to be of value to advanced undergraduate and graduate students, to designers of sustainable biological resources systems, and to scientists and researchers. The aim of these books is to provide information on bio-environmental engineering and to serve as a basis for advanced study or specialized investigation of the theory and analysis of various agricultural and natural resources systems. Volume 2 covers topics on: a) application of secondary flotation, filtration, and coagulant recycle for improvement of a pulp mill primary waste treatment facility; b) management of solid and hazardous wastes; c) microbial enzymes for wastewater treatment; d) a multi-criteria approach to appropriate treatment technology selection for water reclamation; e) chemicals used in agriculture hazards and associated toxicity issues; f) biochar for adsorptive removal of pharmaceuticals from environmental water; g) treatment of palm oil mill effluent; h) treatment and management of solid waste by incineration; i) technologies for removal of volatile organic compounds (VOC) from industrial effluents and/or potable water sources; j) treatment of healthcare waste. **Agricultural, Biosystems, and Biological**
