Environmental Policy Making In Egypt:

Environmental Policy Making in Egypt Salwa Sha'rawi Jum'ah, Salwá Sha'rāwī Jum'ah, Salwā Ša'rāwī Ğum'a, Salwa Sharawi Gomaa, 1997 Gomaa has an international reputation and has won widespread respect both inside and outside Egypt for her research and advocacy on the environment. There is no one better placed than she to provide us with an insider's account combined with a scholar's critique of the entire process. Denis Sullivan, Northeastern University. This book is an example of how to study a specific problem: the environment in Egypt and how it relates to its politics and economics; how to define the parameters to achieve the goal of the study and how to reach the goal. Readers will trace the intellectual input of the author in every line of the book. From the foreword by Mostafa Kamal Tolba. In the first examination of environmental policy and policy making in Egypt, Salwa Sharawi Gomaa analyzes and explains the nature, development, and possible implications of environmental concern as a political issue. She explores the interactions between the Egyptian government, environmental non-government organizations (NGOs), the Green Party, and foreign donors, and explains who makes environmental policy, how that policy is arrived at, and what its impact is. Of particular interest is the substantial amount of fieldwork and interviews on which Gomaa's study is based. Her conversations with government officials, NGO environmentalists, and officials from the international donor community provide insight and a concrete application of complex theoretical principles. Through personal contacts at every level of the process, she is able to show how the environment was put on the policy making agenda, who saw it through the decision making process, how the international donor community got involved, and how local organizations came to play a role. Unlike the grassroots environmentalism of the West, Egypt's environmental initiative originated with the state, following some prodding from the international community. Gomaa's description and analysis of how this process has advanced in a country rife with political and economic challenges holds lessons for environmental advocates throughout the Third World. Her study will also be of special interest for its examination of the role of NGOs in development and in policy making, and the connection between foreign aid and environmental policy. Salwa Sharawi Gomaa is associate research professor in the Social Research Center at the American University in Cairo, associate professor of public and environmental politics at Cairo University, and author of *Egyptian Diplomacy in the Seventies* (1988). *Egypt, Energy and the Environment* Tarek H. Selim, 2009-07-31. Pure environmentalism and pure resource exploitation can be integrated together to form an encompassing sustainability solution. This is the main message of this book, based on an innovative structure: concentration incentives methodology applied to Egypt. This methodology provides a basis for achieving environmental sustainability based on endogenous source-driven forces of change, in contrast to the traditional effects-dominant oriented approach. Though the book's methodology could be used as a framework of analysis in environmental sustainability research for any developing country, Egypt provides a rich case study because of its historical, socio-economic, and political constructs. Sustainable development is generally seen as a tradeoff between resource efficiency

and social equity such that total resource essentials in society can become sustainable in the long run in a manner that meets the needs of current generations without compromising the ability of future generations to meet their own needs

Environmental sustainability cannot be implemented without the direct inclusion of structure form concentration effect and incentives drivers as critical policy choices because 1 they constitute a necessary condition in any country s path towards sustainable development 2 they must be implemented simultaneously as a target and constraint and 3 they require social and political sacrifice complemented by endogenous based systems in contrast to authoritarian solutions

Egypt Energy and the Environment presents research on Egypt s energy and environmental resources from multidisciplinary perspectives It offers sustainability solutions to many of the country s problems relating to energy pollution water gender wildlife politics economics management ecology and information technology The book s method of analysis can be applied to other developing countries as well

Environmental Politics in Egypt Jeannie Sowers,2013-06-26 This book examines the evolution and development of environmental politics in Egypt and how networks operate inside an authoritarian system Tracing attempts by environmental networks to control industrial pollution create and preserve protected areas and restructure the management of Egypt s scarce water supplies the author contributes to a more refined understanding of public policy making and social protest under authoritarian rule in Egypt and the Arab world

Environmental Politics in Egypt Jeannie Sowers,2013-06-26 Drawing on extensive fieldwork conducted in Egypt from the late 1990s to 2011 this book shows how experts and activists used distinctive approaches to influence state and firm decision making in three important environmental policy domains These include industrial pollution from large scale industry the conservation of threatened habitat and water management of the irrigation system These cases show how environmental networks sought to construct legal discursive and infrastructural forms of authority within the context of a fragmented state apparatus and a highly centralized political regime Managerial networks composed of environmental scientists technocrats and consultants sought to create new legal regimes for environmental protection and to frame environmental concerns so that they would appeal to central decision makers Activist networks in contrast emerged where environmental pollution or exclusion from natural resources threatened local livelihoods and public health These networks publicized their concerns and mobilized broader participation through the creative use of public space media coverage and strategic use of existing state sanctioned organizations With the increased popular mobilization of the 2000s and the mass protests of the 2011 revolution environmental politics has become highly topical Expert and activist networks alike have sought to broaden their appeal and diversify their approaches The result may well be a more contested participatory and dynamic phase in Egyptian environmentalism

Steinberg, Stacy D. Vandever, 2012-02-17 Combining the theoretical tools of comparative politics with the substantive concerns of environmental policy experts explore responses to environmental problems across nations and political systems How do different societies respond politically to environmental problems around the globe Answering this question requires systematic cross national comparisons of political institutions regulatory styles and state society relations The field of comparative environmental politics approaches this task by bringing the theoretical tools of comparative politics

to bear on the substantive concerns of environmental policy This book outlines a comparative environmental politics framework and applies it to concrete real world problems of politics and environmental management After a comprehensive review of the literature exploring domestic environmental politics around the world the book provides a sample of major currents within the field showing how environmental politics intersects with such topics as the greening of the state the rise of social movements and green parties European Union expansion corporate social responsibility federalism political instability management of local commons and policymaking under democratic and authoritarian regimes It offers fresh insights into environmental problems ranging from climate change to water scarcity and the disappearance of tropical forests and it examines actions by state and nonstate actors at levels from the local to the continental The book will help scholars and policymakers make sense of how environmental issues and politics are connected around the globe and is ideal for use in upper level undergraduate and graduate courses

The Future of Postcolonial Studies Chantal Zabus,2014-11-20 The Future of Postcolonial Studies celebrates the twenty fifth anniversary of the publication of *The Empire Writes Back* by the now famous troika Bill Ashcroft Gareth Griffiths and Helen Tiffin When *The Empire Writes Back* first appeared in 1989 it put postcolonial cultures and their post invasion narratives on the map This vibrant collection of fifteen chapters by both established and emerging scholars taps into this early mapping while merging these concerns with present trends which have been grouped as comparing converting greening post queering and utopia The postcolonial is a centrifugal force that continues to energize globalization transnational diaspora area and queer studies Spanning the colonial period from the 1860s to the present The Future of Postcolonial Studies ventures into other postcolonies outside of the Anglophone purview In reassessing the nation state language race religion sexuality the environment and the very idea of the future this volume reasserts the notion that postcolonial is an anticipatory discourse and bears testimony to the driving energy and thus the future of postcolonial studies

The Right to Nature Elia Apostolopoulou,Jose A. Cortes-Vazquez,2018-12-07 Since the 2008 financial crash the expansion of neoliberalism has had an enormous impact on nature society relations around the world In response various environmental movements have emerged opposing the neoliberal restructuring of environmental policies using arguments that often bridge traditional divisions between the environmental and labour agendas *The Right to Nature* explores the differing experiences of a number of environmental social movements and struggles from the point of view of both activists and academics This collection attempts to both document the social ecological impacts of neoliberal attempts to exploit non human nature in the post crisis context and to analyse the opposition of emerging environmental movements and their demands for a radically different production of nature based on social needs and environmental justice It also provides a necessary space for the

exchange of ideas and experiences between academics and activists and aims to motivate further academic activist collaborations around alternative and counter hegemonic re thinking of environmental politics This book will be of great interest to students scholars and activists interested in environmental policy environmental justice social and environmental movements

Between Preservation and Exploitation Kemi Fuentes-George, 2016-03-25 A study of biodiversity governance analyzes the factors that determine the effectiveness of transnational advocacy networks and the importance of justice claims to conservation In the late 2000s ordinary citizens in Jamaica and Mexico demanded that government put a stop to lucrative but environmentally harmful economic development activities bauxite mining in Jamaica and large scale tourism and overfishing on the eastern coast of the Yucatán Peninsula In each case the catalyst for the campaign was information gathered and disseminated by transnational advocacy networks TANs of researchers academics and activists Both campaigns were successful despite opposition from industry supporters Meanwhile simultaneous campaigns to manage land in another part of the Yucatán and to conserve migratory birds in Egypt had far less success In this book Kemi Fuentes George uses these four cases to analyze factors that determine the success or failure of efforts by TANs to persuade policymakers and private sector actors in developing countries to change environmental behavior Fuentes George argues that in order to influence the design and implementation of policy TANs must generate a scientific consensus create social relationships with local actors and advocate for biodiversity in a way that promotes local environmental justice Environmentally just policies would allow local populations access to their lands provided they use natural resources sustainably Justice claims are also more likely to generate needed support among local groups for conservation projects In their conservation efforts Jamaica Mexico and Egypt were attempting to meet their obligations under the UN Convention on Biological Diversity and other regional agreements Fuentes George s innovative analysis shows the importance of local environmental justice for the implementation of international environmental treaties

Global Environmental Policy Charles H. Eccleston, Frederic March, 2011-06-27 Environmental policy is often practiced reactively with each crisis addressed as an isolated event Focusing on development of proactive policies *Global Environment Policy Concepts Principles and Practice* provides the essential scientific and socioeconomic framework for formulating pragmatic and comprehensive environmental policies It discusses topics of interest to American and international audiences Beginning with basic concepts the book proceeds successively on to more advanced principles theories and practices for developing and implementing comprehensive environmental policy solutions Topics are introduced in a logical yet connected user friendly manner Using practical case studies and examples the book illustrates both the power and limitations of theoretical approaches It defines the scope and nature of the environmental policy problem outlining its origins and evolution and introduces the policy frameworks of the United Nations European Union and the United States Each chapter begins with a case study and ends with a problem set the questions are designed to elicit practical and critical thinking The book ends with two capstone problems that exemplify nearly every major

topic and aspect presented in this book Upon completion students should possess the competency required to examine a real world problem evaluate it in terms of the concepts principles and tools described throughout the book and develop a practical policy solution for resolving that problem
