The articles by Carson and Williams are focused on what may well be the greatest danger of the modern world: environmental pollution that causes drastic changes in nature and people's organisms. While the authors describe different aspects of contamination, they agree that unless humanity starts treating the world with more respect, soon habitable land will be impossible to find, and no natural beauty will survive for humans to admire.

Carson's article is focused on describing the detrimental effect of pesticides on living organisms. The writer introduces the subject by way of a beautiful illustration of a town full of blossoms, singing birds, and freshwater. Soon, however, the picture changes: "a strange blight crept over the area" and "everywhere was a shadow of death" (Carson). Plants and animals die, and the spring is characterized as silent, "without voices"; no pollination takes place, and consequently, no fruit emerges (Carson). The author explains that the damaging alterations have become possible due to the use of a large number of pesticides in the area.

The dramatic effect of the story is intensified by the author's meticulous choice of descriptive words. Carson boldly declares that "no witchcraft" of "enemy action" has "silenced the rebirth of new life." She emphasizes that only humans are to blame for the severe damage. The same thought can be traced to William's story, in which the writer analyzes the detrimental impact of nuclear bomb testing on people's health.

Through the prism of her family history, Williams shows the big picture in terms of America's attitude toward its people during the 1950s (608). Williams's story is full of bitter irony that she employs to describe the tremendous losses of her family and many other families living in the neighborhood. The author's family endured so many instances of breast cancer that she even came up with the title "The Clan of One-Breasted Women" (Williams 607). The author became so accustomed to the deadly disease that she admitted that "cancer was part of life" (Williams 7). The reason why so many people suffered was the nuclear testing performed in the area.

Williams was appalled by the reaction of the government, which said, "despite burns, blisters, and nausea," that nothing should interfere with the series of tests (608).

Statistical Methods for Environmental Pollution Monitoring Richard O. Gilbert,1987-02-15 This book discusses a broad range of statistical design and analysis methods that are particularly well suited to pollution data It explains key statistical techniques in easy to comprehend terms and uses practical examples exercises and case studies to illustrate procedures Dr Gilbert begins by discussing a space time framework for sampling pollutants He then shows how to use statistical sample survey

methods to estimate average and total amounts of pollutants in the environment and how to determine the number of field samples and measurements to collect for this purpose Then a broad range of statistical analysis methods are described and illustrated These include determining the number of samples needed to find hot spots analyzing pollution data that are lognormally distributed testing for trends over time or space estimating the magnitude of trends comparing pollution data from two or more populations New areas discussed in this sourcebook include statistical techniques for data that are correlated reported as less than the measurement detection limit or obtained from field composited samples Nonparametric statistical analysis methods are emphasized since parametric procedures are often not appropriate for pollution data This book also provides an illustrated comprehensive computer code for nonparametric trend detection and estimation analyses as well as nineteen statistical tables to permit easy application of the discussed statistical techniques In addition many publications are cited that deal with the design of pollution studies and the statistical analysis of pollution data This sourcebook will be a useful tool for applied statisticians ecologists radioecologists hydrologists biologists environmental engineers and other professionals who deal with the collection analysis and interpretation of pollution in air water and soil

A Perspective of Environmental Pollution M. W. Holdgate, 1979-05-17 Holdgate's 1979 book *A Perspective of Environmental Pollution* was an intensely important volume when it was first published looking as it did to contextualise and extensively review the effects of pollution throughout the 1970s As founding director of the Department of the Environment's Central Unit on Environmental Pollution Dr Holdgate was eminently well qualified to provide this analysis Holdgate takes an ecological view of pollutants pathways and environmental change whilst also looking at international pollution and the way in which patterns

of pollution are monitored and costed Whilst his primary analysis is scientific he also writes confidently and convincingly on the legal administrative and economic effects of industrial processes on the environment This book will continue to be of use to anyone with an interest in the impact and assessment of environmental pollution Environmental Pollution Vijay P.

Environmental Pollution and the Media Glenn D. Hook,Libby Lester,Meng Ji,Kingsley Edney,Chris G. Pope,Luli van der Does-Ishikawa,2017-04-07 This book offers a theoretically informed empirical investigation of national media reporting and political discourse on environmental issues in Australia China and Japan It illuminates the risks harms and responsibilities associated with climate change through an analysis of pollution adopting an interdisciplinary approach drawing on both the social sciences and humanities A particular strength of the work is the detailed analysis of the data using a range of both

quantitative and qualitative techniques enabling the authors to reveal in rich and compelling detail the complex relationship between risk and responsibility in the climate change discourse The case studies of Australia China and Japan are set in the current literature as well as in the historical context of climate change in these three countries The analysis of the media discourse on the Great Barrier Reef in Australia demonstrates how the mining of coal for overseas markets has led to devastating harm to the life of the reef A critical discussion of the Chinese documentary Under the Dome shows how this medium has played a crucial role in building awareness of the harm from atmospheric pollution among the citizens shaping attitudes and promoting action The first case study of Japan elucidates how cross border atmospheric pollution from China forges a chain of responsibility for responding to climate change running from the state to society The other case study of Japan demonstrates how smart cities have emerged as a way to mitigate the risks and harms of climate change The Conclusion draws together the similarities and differences in how climate change is addressed in the three countries In all Environmental Pollution and the Media Political Discourses of Risk and Responsibility in Australia China and Japan uncovers the dynamics of the triadic relationship among risk harm and climate change in Australia China and Japan By so doing the book makes an original and timely contribution to understanding comparative media discourse and political debates on climate change
