Environmental Regulation And Rationality Multidisciplinary Perspectives:

Environmental Regulation and Rationality Suzanne C. Beckmann, 2001 What does it take to change the behavior of people and businesses with respect to the environment In the 1990s a group of social scientists gathered to discuss this question from their individual perspectives in disciplines ranging from marketing to theology and jurisprudence to psychology Rather soon it became clear to them that they first needed to focus on basic assumptions about human motivation and rationality otherwise it was impossible for say the economist who regards individuals as calculating maximizers of utility to understand the sociologist who presumes they are role playing or norm guided beings Prompted by these debates on first principles this volume gathers together some of the participants' perspectives on rationality Wherever possible the authors link the discussion of rationality to matching conceptions of nature and human attitudes toward it The colloquy is opened by asking what it means to act rationally insofar as human actions have an impact on the environment and then proceeds to trace the history of practical reason from Aristotle to Rawls The environmental crisis is portrayed as a crisis of paradigms wherefore some of the sociological and cultural dimensions of rationality are explored Also addressed are respectively the means of environmental governance as seen from an intersection of political science and economics the concept and implementation of sustainability in environmental law the ways that intervention strategies reflect assumptions about human reasoning and motivation the mixed rationality called for by the complexities of environmental law exemplified by the Convention on Biological Diversity and an argument for supplementing rational choice theory with a theory of values in order to explain why people make so many seemingly illogical decisions This book is for anyone interested in multidisciplinary perspectives on rationality or the human dimension of environmental regulation *Consumers, Policy and the Environment* Klaus Günter Grunert, John Thøgersen, 2005-03-29 The role of the consumer has changed from seeking the most satisfaction from goods and services to reconciling consumption with active citizenship which links consumption to modern social issues such as environmental protection sound business ethics and fair working conditions Understanding consumers the way they buy products the way they relate to questions of environmental importance and the way they participate in public policy formulation processes is of vital importance to modern society In this book eminent researchers examine contemporary issues related to the field of consumers policy and the environment *The Theory of Environmental Agreements and Taxes* Martin Enevoldsen, 2005-01-01 Martin Enevoldsen's book is a pioneering work that compares the impacts of various non regulatory environmental strategies in achieving measurable pollution reductions Much has been written on the theoretical virtues and drawbacks of green taxation versus the adoption of voluntary agreements when it comes to effective implementation of environmental goals In convincing detail this book makes the case for the effectiveness of environmental taxation its barriers being primarily political in nature rather than economic Green taxes are highly controversial even in the most environmentally conscious nations particularly when they are regarded as a purely fiscal

instrument The successful Danish CO2 taxation on industry which this study proves to be much more effective than the Dutch system of voluntary agreements or the Austrian laissez faire policies relied not only on the inducement of the CO2 tax itself all of the tax revenue was ploughed back into industry as subsidies for investments in advanced energy saving technologies Martin Enevoldsen's book is simply a must for political scientists environmental economists and environment policymakers Svend Auken M P and former Danish Minister for Environment and Energy Although there is a huge demand for accurate analysis of environmental policy outcomes in both the academic and policy making communities there is currently very little theoretical research on this issue This ambitious book redresses the balance by constructing a new theoretical framework at the crossroads between economics and political science to account for the effectiveness of environmental governance Drawing on insights from new institutional economics environmental economics collective action theory and social capital theory the author analyses how policy outcomes are influenced by institutional factors that constrain and empower the target groups of environmental regulation

Rationality and the Environment Bo Elling, 2012 Environmental assessment and management involve the production of scientific knowledge and its use in decision making processes The result is that within these essentially rational political assessment frameworks experts are creating and applying scientific knowledge for decision and management purposes that actually have strong ethical and aesthetic dimensions Yet these rational political frameworks lack the tools to provide guidance on ethical and aesthetic issues that affect the wider public This revolutionary work argues that ethical and aesthetic dimensions can only be brought into environmental politics and policies by citizens actively taking a stand on the specific matters in question The author draws on Habermas trisection of rationality as cognitive instrumental moral practical and aesthetic expressive to suggest that truly effective environmental policy needs to activate all three approaches and not favour only the rational To achieve this objective the author argues that public participation in environmental policy and assessment is necessary to counteract the dictatorship of technical and economic instrumentality in environmental policy the failure to take ethical and aesthetic rationalities into account and more importantly how such policy is applied on the ground to shape our natural and material world

Corporate Social Responsibility, Accountability and Governance Istemi Demirag, 2018-10-08 The business case for corporate social responsibility which suggests that socially and environmentally aware companies can expect to reap financial rewards is seemingly gaining widespread acceptance within the business community This is particularly apparent in the ever increasing number of prominent companies parading their social ethical and environmental credentials by producing paper or web based social and environmental or sustainability reports In so doing reporting companies claim they are demonstrating a clear commitment to transparency and accountability to their key stakeholder groups However in the prevailing voluntaristic business case centred climate within which such initiatives are taking place little thought appears to have gone into the question of how stakeholders other than the capital provider group can actually use corporate disclosures offered in order to hold

management accountable for the social and environmental consequences of their actions While much corporate rhetoric abounds concerning notions of stakeholder dialogue and engagement rigorous analysis of the governance implications of their claimed commitment to the principles of corporate social responsibility is largely conspicuous by its absence Corporate Social Responsibility Accountability and Governance seeks to explore this missing link between CSR and associated reporting initiatives and governance mechanisms that are capable of embracing true stakeholder accountability A wide range of case studies drawing on experiences of both public and private sector initiatives in Europe the United States Canada South America and Asia offer insightful analysis of the complex relationships between the state the market and civil society in the development of CSR accountability and sustainable development The book employs a multidisciplinary perspective in order to analyse the political social economic technological legal and organisational shaping of CSR The complexities underpinning the concept are thereby clearly drawn out and the gross oversimplifications inherent in the prevailing consultancy driven business case literature painfully exposed Above all the book offers a sound practically and theoretically informed contribution to public policy debate and reflects and builds on urgent calls from public and private sector policy makers as well as academics to develop better governance and accountability frameworks for business to deal with the imperatives of social responsibility sustainable development and ethics This book is divided into five parts In Part 1 the complex concepts of responsibility accountability and governance are discussed and in particular the presumed relationships between the state the market and civil society in improving accountability and governance are explored and critiqued Part 2 consists of chapters relating to corporate social responsibility and stakeholder theory Part 3 is concerned with empirical studies covering governance structures networking and corporate social responsibility Part 4 deals with corporate governance and its implications for regulators and civil society Part 5 discusses multinational companies and how they impact on national governance regimes Finally a summary is provided with emerging international patterns of accountability and governance structures Corporate Social Responsibility Accountability and Governance will be essential reading for public and private policy makers and practitioners and academics interested in how CSR can become more than a soundbite and rather a substantial force for better global corporate governance and accountability

Environmental Reconstruction in Headwater Areas Martin F. Bach, Josef Krecek, 2012-12-06 These proceedings of a NATO Advanced Research Workshop on Environmental Reconstruction in Headwater Areas provide a landmark in the evolution of a distinctive movement perhaps an emerging new philosophy within the practice of headwater management The Headwater Control movement traces its history back to the First International Conference on Headwater Control Prague 1989 Throughout this brief history Headwater Control has remained a typical environment movement ad hoc At its meetings for every convert to the multidisciplinary integrative practical interventionist and above all green ideals of the group there have been several delegates who have found the whole concept both new and slightly incomprehensible One reason for this has been the Headwater Control practice of trying to bring together scientists practitioners policy makers and non government environmentalist organisations The group's larger meetings have always been federal gatherings Sponsorship has been shared with invited participation from associations representing hydrological science soil conservation erosion control forestry environmental activism and so forth These delegations may have included fellow travellers in the work to protect headwater environments but their main concerns have not necessarily coincided with the Headwater Control group's prescriptions for the environmental regeneration of headwater regions The Liberec Workshop whose proceedings are distilled into this volume provided a first opportunity for the scattered supporters of Headwater Control to talk among themselves and find out to what degree there really is a shared vision of the way forward in headwater management restoration and protection

The Routledge Handbook of International Law and Anthropocentrism Vincent Chapaux, Frédéric Mégret, Usha Natarajan, 2023-06-15. This handbook explores, contextualises and critiques the relationship between anthropocentrism (the idea that human beings are socially and politically at the centre of the cosmos) and international law. While the critical study of anthropocentrism has been under way for several years, it has either focused on specific subfields of international law or emanated from two distinctive strands inspired by the animal rights movement and deep ecology. This handbook offers a broader study of anthropocentrism in international law as a global legal system and academic field. It assesses the extent to which current international law is anthropocentric, contextualises that claim in relation to broader critical theories of anthropocentrism and explores alternative ways for international law to organise relations between humans and other living and non-living entities. This book will interest international lawyers, environmental lawyers, legal theorists, social theorists and those concerned with the philosophy and ethics of ecology and the non-human realms. The Protection of Community Interests in the International Law of State Responsibility Julia Lemke, 2025-04-29. This book redefines the traditional understanding of state responsibility. It presents a compelling argument that international law's effectiveness hinges on its ability to protect not only state interests but also those of the global community. Drawing from principles established in the Articles on the Responsibility of States for Internationally Wrongful Acts (ARSIPA), the book examines how states conceptualised as rational actors navigate collective action challenges. Through a law and economics lens, it sheds light on the role of international state responsibility in providing global public goods and safeguarding common

pool resources This interdisciplinary book offers valuable insights and normative suggestions for enhancing the ARSIWA's efficacy in promoting community interests It will appeal to scholars and practitioners in public international law law and economics and international relations interested in a better understanding of international law's role in tackling pressing global issues
