sustainability Solutions to the myriad problems plaguing the quest for sustainability at the city level are equally as diverse and complex but are rooted in the assumptions of the sustainability agenda developed at the Rio Earth Summit and embodied in Local Agenda Action 21 These assumptions state that good governance is a necessary precondition for the achievement of sustainable development particularly at the local level and that the mobilization of local communities is an essential part of this process Yet until now these assumptions which have guided the policies and programmes of over 6000 local authorities around the world have never been seriously tested Drawing on three years of field research in 40 European towns and cities *Governing for Sustainable Cities* is the first book to examine empirically the processes of urban governance in sustainable development Looking at a host of core issues including institutional and social capacity institutional design social equity politics partnerships and cooperation and creative policy making the authors draw compelling conclusions and offer strong guidance This book is essential reading for policy makers politicians activists and NGOs planners researchers and academics whether in Europe North America Australasia or transitional and developing countries concerned with advancing sustainability in our rapidly urbanizing world *Sustainable Cities for the Third Millennium: The Odyssey of Urban Excellence* Voula P. This is achieved by cutting down on electronic waste, using renewable energy sources and consuming less energy. Recyclable materials with minimal environmental impact, software engineering techniques that are optimized and energy efficient hardware are examples of many approaches. Advanced technologies such as low power processors, smart grids and virtualized computing environments contribute to energy efficiency and waste reduction. Furthermore, integrating green computing with renewable energy sources amplifies its positive impact on the environment. The adoption of green computing practices promotes a circular economy, encourages resource conservation and supports climate action.

Green Computing for Sustainable Development features chapters that explore issues that are concerned with furthering sustainability and green computing. Highlights include the following:
