*Botanical Architecture* Paul Dobraszczyk, 2024-11-12 An original call to reorient architecture around our relationship to plants When we look at trees we see a form of natural architecture and yet we have seemingly always exploited trees to make new buildings of our own Whereas a tree creates its own structure humans generally destroy other things to build with increasingly disastrous consequences In *Botanical Architecture* Paul Dobraszczyk looks closely at how elements of plants seeds roots trunks branches leaves flowers and canopies compare with and constitute human made buildings Given the omnipresence of plant life in and around our structures Dobraszczyk argues that we ought to build as much for plants as for ourselves understanding that our lives are always totally dependent on theirs *Botanical Architecture* offers a provocative and original take on the relationship between ecology and architecture

Newton D'souza,2019-11-21 The Multi Skilled Designer presents and analyzes different approaches to contemporary architectural design and interprets them through the theory of multiple intelligences The book establishes a systematic framework that uses the lens of cognitive psychology and developments in psychometric and brain research to analyze the unique cognitive thought processes of architectural designers and compiles design projects that could serve as a pedagogical companion for the reader The book is aimed at design practitioners and students interested in examining their own thinking styles as well as those involved in design cognition research Abundance Not Capital Angelika Fitz,Elke

architects for today's designers      **Architects' Sketches** Kendra Schank Smith, 2012-05-23 Concepts from architects' minds evolve through sketches and as a mode of transference are conveyed to the finished building. This book compares qualities of sketches to reveal unique approaches to the instruments of thinking in which all architects engage. It provides new insight into the relationship between architectural sketches and the process of creative manipulation. Sketches comprise a thinking mechanism and through the qualities of ambiguity, quickness and change they initiate a dialogue for architects. As a medium to facilitate communication, recording, discovery and evaluation, their pertinence lies in their ability to exhibit both the precise and the imprecise. Exploring four related theoretical approaches: play, memory, imagination, fantasy, caricature and the grotesque, the book shows how imprecision stimulates imagination to conceive new forms in the dialogue of architectural sketches.

Recto Verso: Redefining the Sketchbook Angela Bartram, Nader El-Bizri, Douglas Gittens, 2016-04-08 Bringing together a broad range of contributors including art, architecture and design academic theorists and historians, in addition to practicing artists, architects and designers, this volume explores the place of the sketchbook in contemporary art and architecture. Drawing upon a diverse range of theories, practices and reflections common to the contemporary conceptualisation of the sketchbook and its associated environments, it offers a dialogue in which the sketchbook can be understood as a pivotal working tool that contributes to the creative process and the formulation and production of visual ideas. Along with exploring the theoretical, philosophical, psychological and curatorial implications of the sketchbook, the book addresses emergent digital practices by way of examining contemporary developments in sketchbook productions and pedagogical applications. Consequently, these more recent developments question the validity of the sketchbook as both an instrument of practice and creativity and as an educational device. International in scope, it not only explores European intellectual and artistic traditions but also intercultural and cross-cultural perspectives, including reviews of practices in Chinese artworks or Islamic calligraphy and situational contexts that deal with historical examples such as Roman art or modern practices in geographical cultural regions like Pakistan.

*Le Corbusier in Detail* Flora Samuel, 2007-08-31 This is the first book to give such close attention to Le Corbusier's approach to the making of buildings. It illustrates the ways in which Le Corbusier's details were expressive of his overall philosophical intentions. It is not a construction book in the usual sense; rather, it focusses on the meaning of detail on the ways in which detail informs the overall architectural narrative of a building. Well illustrated and containing several specially prepared scaled drawings, it acts as a timely reminder to both students and architects of the possibilities inherent in the most small-scale tectonic gestures.

**The Words Between the Spaces** Deborah Cameron, Thomas A. Markus, 2003-09-02 Using language, speaking and understanding, it is a defining ability of human beings woven into all human activity. It is therefore inevitable that it should be deeply implicated in the design, production and use of buildings. Building legislation, design guides, competition and other briefs, architectural criticism, teaching and scholarly material and the media all produce their characteristic texts. The authors use texts about such projects

as Berlin's new Reichstag Scotland's new Parliament and the Auschwitz concentration camp museum to clarify the interaction between texts design critical debate and response
