Albrecht, Colin R. Reeves, Nigel C. Steele, 2012-12-06 Artificial neural networks and genetic algorithms both are areas of research which have their origins in mathematical models constructed in order to gain understanding of important natural processes By focussing on the process models rather than the processes themselves significant new computational techniques have evolved which have found application in a large number of diverse fields This diversity is reflected in the topics which are the subjects of contributions to this volume There are contributions reporting theoretical developments in the design of neural networks and in the management of their learning In a number of contributions applications to speech recognition tasks control of industrial processes as well as to credit scoring and so on are reflected Regarding genetic algorithms several methodological papers consider how genetic algorithms can be improved using an experimental approach as well as by hybridizing with other useful techniques such as tabu search The closely related area of classifier systems also receives a significant amount of coverage aiming at better ways for their implementation Further while there are many contributions which explore ways in which genetic algorithms can be applied to real problems nearly all involve some understanding of the context in order to apply the genetic algorithm paradigm more successfully That this can indeed be done is evidenced by the range of applications covered in this volume *Fuzzy Systems Conference (FUZZ)*, 2000 IEEE Neural Networks Council, 2000 **Proceedings of the ... Optimization of Air Traffic Daniel Delahaye, Stéphane Puechmorel, 2013-07-01. This book combines the research activities of the authors, both of whom are researchers at Ecole Nationale de l'Aviation Civile (French National School of Civil Aviation) and presents their findings from the last 15 years. Their work uses air transport as its focal point within the realm of mathematical optimization, looking at real life problems and theoretical models in tandem and the challenges that accompany studying both approaches. The authors' research is linked with the attempt to reduce air space congestion in Western Europe, USA, and increasingly Asia. They do this through studying stochastic optimization, particularly artificial evolution, the sectorization of airspace, route distribution, and takeoff slots, and by modeling airspace congestion. Finally, the authors discuss their short, medium, and long term research goals. They hope that their work, although related to air transport, will be applied to other fields such as the transferable nature of mathematical optimization. At the same time, they intend to use other areas of research such as approximation and statistics to complement their continued inquiry in their own field.

Solving complex optimization problems with parallel metaheuristics. Parallel Metaheuristics brings together an international group of experts in parallelism and metaheuristics to provide a much needed synthesis of these two fields. Readers discover how metaheuristic techniques can provide useful and practical solutions for a wide range of problems and application domains, with an emphasis on the fields of telecommunications and bioinformatics. This volume fills a long existing gap, allowing researchers and practitioners to develop efficient metaheuristic algorithms to find solutions. The book is divided into three parts: Part One: Introduction to Metaheuristics and Parallelism, including an Introduction to Metaheuristic Techniques, Measuring the Performance of Parallel Metaheuristics, New Technologies in Parallelism, and a head-to-head discussion on Metaheuristics and Parallelism; Part Two

Parallel Metaheuristic Models including Parallel Genetic Algorithms Parallel Genetic Programming Parallel Evolution Strategies Parallel Ant Colony Algorithms Parallel Estimation of Distribution Algorithms Parallel Scatter Search Parallel Variable Neighborhood Search Parallel Simulated Annealing Parallel Tabu Search Parallel GRASP Parallel Hybrid Metaheuristics Parallel Multi Objective Optimization and Parallel Heterogeneous Metaheuristics Part Three Theory and Applications including Theory of Parallel Genetic Algorithms Parallel Metaheuristics Applications Parallel Metaheuristics in Telecommunications and a final chapter on Bioinformatics and Parallel Metaheuristics Each self contained chapter begins with clear overviews and introductions that bring the reader up to speed describes basic techniques and ends with a reference list for further study Packed with numerous tables and figures to illustrate the complex theory and processes this comprehensive volume also includes numerous practical real world optimization problems and their solutions This is essential reading for students and researchers in computer science mathematics and engineering who deal with parallelism metaheuristics and optimization in general

Evolutionary Algorithms Alain Petrowski, Sana Ben-Hamida, 2017-04-12
Evolutionary algorithms are bio inspired algorithms based on Darwin's theory of evolution They are expected to provide non optimal but good quality solutions to problems whose resolution is impracticable by exact methods In six chapters this book presents the essential knowledge required to efficiently implement evolutionary algorithms Chapter 1 describes a generic evolutionary algorithm as well as the basic operators that compose it Chapter 2 is devoted to the solving of continuous optimization problems without constraint Three leading approaches are described and compared on a set of test functions Chapter 3 considers continuous optimization problems with constraints Various approaches suitable for evolutionary methods are presented Chapter 4 is related to combinatorial optimization It provides a catalog of variation operators to deal with order based problems Chapter 5 introduces the basic notions required to understand the issue of multi objective optimization and a variety of approaches for its application Finally Chapter 6 describes different approaches of genetic programming able to evolve computer programs in the context of machine learning
