Recommendations are made on steps for developing a coordinated unified system for food safety. The book also highlights areas that need additional study. Ensuring Safe Food will be important for policymakers, food trade professionals, food producers, food processors, food researchers, public health professionals, and consumers. Scientific Criteria to Ensure Safe Food. National Research Council, Institute of Medicine, Division on Earth and Life Studies, Board on Agriculture and Natural Resources, Food and Nutrition Board, Committee on the Review of the Use of Scientific Criteria and Performance Standards for Safe Food, 2003-09-29. Food safety regulators face a daunting task: crafting food safety performance standards and systems that continue in the tradition of using the best available science to protect the health of the American public while working within an increasingly antiquated and fragmented regulatory framework. Current food safety standards have been set over a period of years and under diverse circumstances based on a host of scientific, legal, and practical constraints. Scientific Criteria to Ensure Safe Food lays the groundwork for creating new regulations that are consistent, reliable, and ensure the best protection for the health of American consumers. This book addresses the biggest concerns in food safety, including microbial disease surveillance, plans, tools for establishing food safety criteria, and issues specific to meat, dairy, poultry, seafood, and produce. It provides a candid analysis of the problems with the current system and outlines the major components of the task at hand: creating workable, streamlined food safety standards and practices. **Enhancing Food Safety**. National Research Council, Institute of Medicine, Board on Agriculture and Natural Resources, Food and Nutrition Board, Committee on the Review of the Food and Drug Administration's Role in Ensuring Safe Food, 2010-12-04. Recent outbreaks of illnesses traced to contaminated sprouts and lettuce illustrate the holes that exist in the system for monitoring problems and preventing foodborne diseases. Although it is not solely responsible for ensuring the safety of the nation's food supply, the U.S. Food and Drug Administration (FDA) oversees monitoring and intervention for 80 percent of the food supply. The U.S. Food and Drug Administration's abilities to discover potential threats to food safety and prevent outbreaks of foodborne illness are hampered by impediments to efficient use of its limited resources and a piecemeal approach to gathering and using information on risks. Enhancing Food Safety: The Role of the Food and Drug Administration, a new book from the Institute of Medicine and the National Research Council, responds to a congressional request for recommendations on how to close gaps in FDA's food safety systems. Enhancing Food Safety begins with a brief review of the Food Protection Plan (FPP), FDA's food safety philosophy developed in 2007. The lack of sufficient detail and specific strategies in the FPP renders it ineffectual. The book stresses the need for FPP to evolve and be supported by the type of strategic planning described in these pages. It also explores the development and implementation of a stronger, more effective food safety system built on a risk-based approach to food safety management. Conclusions and recommendations include adopting a risk-based decision-making approach to food safety, creating a data surveillance and research infrastructure integrating federal, state, and local government food safety programs, enhancing efficiency of inspections, and more. Although food safety is the

responsibility of everyone from producers to consumers the FDA and other regulatory agencies have an essential role In many instances the FDA must carry out this responsibility against a backdrop of multiple stakeholder interests inadequate resources and competing priorities Of interest to the food production industry consumer advocacy groups health care professionals and others Enhancing Food Safety provides the FDA and Congress with a course of action that will enable the agency to become more efficient and effective in carrying out its food safety mission in a rapidly changing world
