Collaboration David M. Levermore, Cheng Hsu, 2006-11-24 Global supply chain is a fact of life in today s world From the perspective of the First World this practice reigns in outsourcing of jobs that in the view of many threatens a way of life This argument actually implies that outsourcing represents a fair chance for the Third World to catch up and reverse leverage through market economy However many in the Third World are also opposed to the global market economy from an opposite argument The fact that matters is of course that globalization continues to progress relentlessly in its own momentum and that the national playing grounds continue to level globally for both Worlds Would globalization results in the rich nations getting richer and the poor poorer or would it help the world united in the same economical reason The questions that we the

researchers could try to answer are a different kind the kind that leads to the understanding of the elements of the fittest in the global competition For instance what defines an enterprise s staying power on the top of the food chain or an economy s ability to design and control the global supply chains in the long term Evidently to understand this ability the field needs to study the engineering prowess required as much as the finance and management if the history of industrial revolution is any guide Yet the study on the engineering of global supply chains has been largely lacking

Information Systems: The Connection Of People And Resources For Innovation - A Textbook Cheng K Hsu, 2013-01-25 This unique new textbook on Information Systems IS provides an answer to a few basic questions in the field What is the scientific nature of IS How do we design IS in today s connected world What is the relationship between IS and innovation in knowledge economies Whereas mainframe corporate computers tended to dominate the thinking in the 1980s the dominating factor today is personal digital devices that connect the world as one whole IS Network science is emerging to describe these digital connections e g social networking and service science is similarly emerging to describe service value networks This book therefore synthesizes the emerging network science and service science with the classic IS theory resulting in a new set of principles for IS strategic planning It also reviews the standard IS topics of system analysis and database design covering the whole spectrum of databases and all the major methods and techniques of database design The role of IS as a technological innovation in the knowledge economy is also analyzed In doing so new concepts such as basic values of IS systems of IS sustainability of IS IS as a service system IS as a human value network and the hyper network model for innovation by IS are developed

Interoperating Geographic Information Systems Michael Goodchild, Max J. Egenhofer, Robin Fegeas, Cliff Kottman, 2012-12-06 Geographic information systems have developed rapidly in the past decade and are now a major class of software with applications that include infrastructure maintenance resource management agriculture Earth science and planning But a lack of standards has led to a general inability for one GIS to interoperate with another It is difficult for one GIS to share data with another or for people trained on one system to adapt easily to the commands and user interface of another Failure to interoperate is a problem at many levels ranging from the purely technical to the semantic and the institutional Interoperating Geographic Information Systems is about efforts to improve the ability of GISs to interoperate and has been assembled through a collaboration between academic researchers and the software vendor community under the auspices of the US National Center for Geographic Information and Analysis and the Open GIS Consortium Inc It includes chapters on the basic principles and the various conceptual frameworks that the research community has developed to think about the problem Other chapters review a wide range of applications and the experiences of the authors in trying to achieve interoperability at a practical level Interoperability opens enormous potential for new ways of using GIS and new mechanisms for exchanging data and these are covered in chapters on information marketplaces with special reference to geographic information Institutional arrangements are also likely to be profoundly affected by the trend towards interoperable systems and nowhere is the impact of interoperability more likely to cause fundamental change than in education as educators address the needs of a new generation of GIS users with access to a new generation of tools The book concludes with a series of chapters on education and institutional change Interoperating Geographic Information Systems is suitable as a secondary text for graduate level courses in computer science geography spatial databases and interoperability and as a reference for researchers and practitioners in industry commerce and government
