Environment And Behavior:

Environment and Behavior Robert B. Bechtel, 1997-01-06 This comprehensive introductory text presents a unified view of human environment problems Unlike most texts in the field that treat environmental psychology as a branch of psychology only Environment and Behavior covers the topic from a cross disciplinary nature The book is more inclusive of all aspects of environmental studies and emphasizes the innovative thinking required to deal with environmental problems The breadth of coverage offered by Environment and Behavior will enable the instructor to choose the focus for each particular course because it contains chapters on a variety of subject areas including environmental engineering biology geography architecture evolutionary biology sociology clinical psychology and gerontology Environment and Behavior is a one of a kind text with a unique style that will make it a must for all courses related to the environment including urban studies and psychology

Perspectives on Environment and Behavior Daniel Stokols, 2012-03-30 The inception of this volume can be traced to a series of Environmental Psychology Colloquia presented at the University of California Irvine during the spring of 1974 These colloquia were held in conjunction with Social Ecology 252 a graduate seminar on Man and the Environment Although the eight colloquia covered a wide range of topics and exemplified a diversity of research techniques they seemed to converge on some common theoretical and methodological assumptions about the nature of environment behavioral research The apparent continuities among these colloquia suggested the utility of developing a manuscript that would provide a historical overview of research on environment and behavior a representation of its major concerns and an analysis of its conceptual and empirical trends Thus expanded versions of the initial presentations were integrated with a supplemental set of invited manuscripts to yield the present volume of original contributions by leading researchers in the areas of ecological and environmental psychology

Environment and Behavior C. Holahan, 2012-12-06 This book has been written as a text for advanced undergraduate students and graduate students in the burgeoning field of study that has come to be called environment and behavior It is appropriate for courses in environmental psychology social ecology ecological psychology and community psychology when the community is conceptualized from an ecological viewpoint In addition the book may be used in design courses oriented toward an appreciation of the interaction between architecture and human behavior The book presents a thorough explication of a perspective or viewpoint in approaching the study of environment and behavior which has tended to be underemphasized in past work in this area The dynamic perspective focuses on the active role people play in dealing with environmental challenges Its investigative interest is in the processes that mediate the effects of environment on behavior especially the positive and adaptive ways in which people cope with the environment The accent is on the creative complex yet subtle character of these environmental processes

Human Behavior and Environment Irwin Altman, Joachim F. Wohlwill, 2013-11-11 This is the first in a series of volumes concerned with research encompassed by the rather broad term environment and behavior The goal of the series is to begin the process

of integration of knowledge on environmental and behavioral topics so that researchers and professionals can have material from diverse sources accessible in a single publication. The field of environment and behavior is broad and interdisciplinary with researchers drawn from a variety of traditional disciplines such as psychology, sociology, anthropology, geography, and other social and behavioral sciences and from the biological and life sciences of medicine, psychiatry, biology, and ethology. The interdisciplinary quality of the field is also reflected in the extensive involvement of environmental professionals from architecture, urban planning, landscape architecture, interior design, and other fields such as recreation and natural resources to name just a few. At present, the field has a somewhat chaotic flavor with research being carried out by a variety of scholars who publish in a multitude of outlets. Many researchers and practitioners are unaware of the state of knowledge regarding a specific topic because of the unavailability of integrated reference materials. There are only a handful of books dealing with environment and behavior, most of them unintegrated collections of readings with only an occasional systematic analysis of some facet of the field.

Behavior and the Natural Environment Irwin Altman, Joachim F. Wohlwill, 2012-12-06. The theme of the present volume concerns people's response to the natural environment considered at scales varying from that of a household plant to that of vast wilderness areas. Our decision to focus on this particular segment of the physical environment was prompted in part by the intrinsic interest in this subject on the part of a diverse group of social scientists and professionals and of laypersons for that matter and in part by the relative neglect of this topic in standard treatments of the environment-behavior field. It also serves to bring out once again the interdisciplinary nature of that field and we are pleased to have been able to include representatives from geography, sociology, social ecology, and natural recreation among our contributors. We believe that this volume will serve a useful purpose in helping to integrate the findings and concepts in this presently somewhat fragmented field scattered as they are over a very diverse array of publications representing a similarly varied group of specialties. It is hoped that the result will be to stimulate future development of this area and to add a measure of increased coherence to it. Volume 7 of our series will be devoted to the theme of elderly people and the environment with M. Powell Lawton joining us as guest co-editor. The titles of the papers comprising Volume 7 are shown on page v.

Person-Environment-Behavior Research Douglas Amedeo, Reginald G. Golledge, Robert J. Stimson, 2008-09-26. Research into spatial influences on people's everyday activities and experiences presents many conceptual and methodological complexities. Written by leading authorities, this book provides a comprehensive framework for collecting and analyzing reliable person-environment-behavior data in real-world settings that rarely resemble the controlled conditions.

described in typical texts. An array of research designs are illustrated in chapter length examples addressing such compelling issues as spatial patterns of voting behavior, ways in which disabilities affect people's travel and wayfinding, how natural and built environments evoke emotional responses, spatial factors in elementary teaching and learning, and more. A special chapter guides the student or beginning researcher to craft a successful research proposal.

Environment and Behavior Donald M. Baer, 2020-12-07 This book is organized around the clusters of details about how behavior is controlled by its environmental antecedents and about how behavior can control its antecedents. It illustrates how to integrate environmental awareness into professional practice and design.

Environment and Behavior Studies Irwin Altman, Kathleen Christensen, 2012-12-06 This eleventh volume in the series departs from the pattern of earlier volumes. Some of those volumes addressed research design and policy topics in terms of environmental settings, for example, homes, communities, neighborhoods, and public places. Others focused on environmental users, for example, children and the elderly. The present volume examines the field of environment and behavior studies itself in the form of intellectual histories of some of its most productive and still visible senior participants. In so doing, we hope to provide readers with a grand sweep of the field, its research and design content, methodology, institutions, and past and future trajectories through the experiences and intellectual histories of its participants. Why intellectual histories? Several factors led to the decision to launch this project. For one, 1989 was an anniversary and commemorative year for the Environmental Design Research Association, perhaps the major and most long-standing interdisciplinary organization of environment and behavior researchers and practitioners. Established in 1969, this organization has been the vehicle for generations of researchers and practitioners from many disciplines to come together annually to exchange ideas, present papers, and develop professional and personal relationships. It held its first and twentieth meetings in North Carolina, with the twentieth conference substantially devoted to discussions of the past, present, and future of the field, a taking stock, so to speak. Thus, it seemed appropriate to launch a volume on intellectual histories at this significant juncture in the life of the field.

Perspectives on Environment and Behavior Daniel Stokols, 2013-11-11 The inception of this volume can be traced to a series of Environmental Psychology Colloquia presented at the University of California, Irvine during the spring of 1974. These colloquia were held in conjunction with Social Ecology 252, a graduate seminar on Man and the Environment. Although the eight colloquia covered a wide range of topics and exemplified a diversity of research techniques, they seemed to converge on some common theoretical and methodological assumptions about the nature of environment-behavior research. The apparent continuities among these colloquia suggested the utility of developing a manuscript that would provide a historical overview of research on environment and behavior, a representation of its major concerns, and an analysis of its conceptual and empirical trends. Thus, expanded versions of the initial presentations were integrated with a supplemental set of invited manuscripts to yield the present volume of original contributions by leading researchers in the areas of ecological and environmental psychology.

Architects city planners and other design professionals have used theory and research from psychology and other behavioral sciences to make their work more responsive to the needs of the people who use the buildings parks and city streets they help to shape This book describes in detail thirteen cases in which that approach was followed It analyzes the use of environmental design research in each case demonstrating how it has made a positive contribution in these cases and how its use can improve design and planning processes in general and thus the quality of the built and natural environments

Wohlwill, 2012-12-06 The papers comprising this second volume of *Human Behavior and the Environment* represent as do their predecessors a cross section of current work in the broad area of problems dealing with interrelationships between the physical environment and human behavior at both the individual and the aggregate levels Considering the two volumes as a unit we have included papers covering a broad spectrum of problems ranging from the theoretical to the applied and from the disciplinary based to the interdisciplinary and professional Approximately half of the papers are written by psychologists with the remainder coming in part from such other disciplines as sociology geography and from such diverse applied and professional fields as natural recreation landscape architecture urban planning and operations research The volumes thus provide an overview of work on current topical problems Yet as the field is developing specialization is inevitably increasing apace and the editors as well as the publisher have become convinced of the desirability for future volumes in this series to be organized along topical lines with successive volumes devoted to different aspects of this rather sprawling field Thus Volume 3 currently in the planning stage will be devoted exclusively to the interaction of children with the physical environment considered from diverse viewpoints again including authors from diverse fields of specialization
