Meaning Carmela Cucuzzella, Sherif Goubran, 2021-01-05 Each day new articles books and reports present new methods standards and technologies for achieving sustainability in architecture Additionally new materials technological gadgets and data are increasingly considered the staples of architecture s future As we increasingly embrace this techno advancement we must be equally aware that we may be pushing architecture into a managerial science and away from its core concerns such as expression contextuality functionality and aesthetics Sustainable architecture that is focused on the abstract measurements of consumption energy and emissions loses sight of the vital role that architecture holds in our world it is the field that creates our public spaces and our places of dwelling of business of production of leisure and creation Additionally it fails to comprehend the human dimension of buildings as elements that are deeply connected to their sites historic contexts and that play a key role in defining our social relations and our connection to the spaces we occupy and utilize Sustainable Architecture Between Measurement and Meaning takes a step back to reflect on how sustainability in the built environment can be theorized and practiced critically This book exposes that architecture remains a human and social science that lies at the intersection of measurements and meanings It reveals that sustainable architecture can still operate in a dialectic space of expression rather than serving as a manifesto for either the technical or socio cultural extremes It purports that the human intuition senses and skills still holds the key to unravelling alternative futures of sustainable built spaces And that most importantly humans still have a place in sustainable architecture This book will be of interest to students early career scholars established researchers and practitioners studying sustainability in the built environment It can be used as a referencee to those in the fields of design architecture landscape and urban design urban studies geography social sciences and engineering *Architectural, Construction, Environmental and Digital Technologies for Future Cities* Natalia Potienko, Elena Ahmedova, Antonina Karlina, Vladimir Faerman, 2022-04-27 This book offers an overview of Russian and international experience in developing the concept of future cities and its practical implementation The concept of future cities is associated with several important trends The first trend is the sustainable development of the urban environment and the implementation of eco friendly technologies and materials in civil construction industrial and power plants The harmonious coexistence of the citizens with all forms of nature in the urban habitat becomes a great value The second trend is the individualization of the aesthetical and architectural image of the future cities The city s unique flavor based on the blending of the historical legacy and architectural traditions is now as important as the utility of the environment The third trend is the digitalization of the urban environment with the use of state of the art sensors information and communication technologies and data science The efficiency of operations and services achieved by the extensive use of complex IoT networks becomes a value as well The last trend is the adaptation of the urban and social environment for individual demands of a community and a person Individual comfort and safety are now more important than ever before By addressing these trends the volume discusses local and international plans practices and technologies aimed at the development and

implementation of future cities      **Soupergreen!** Doug Jackson,2021-06-21 SOUPERgreen features projects and essays that offer a long overdue critique of the current approach to green architecture and in turn demonstrate a more appropriate way for architects to address the challenges posed by the environmental crisis In sharp contrast to contemporary examples of green or sustainable architecture which primarily rely upon the invisible agency of unremarkable technologies and materials to reduce resource consumption but which do so without producing a necessary shift in the public s perception of the environment or behavior towards it SOUPERgreen demonstrates how green technology can not only perform from a measurable standpoint but can also produce engaging experiences that profoundly alter enhance and transform the public s understanding of the environment By leveraging the inherently expressive nature of technology in order to dramatize the constantly negotiated relationship between humanity and the natural world the souped up green architecture featured in SOUPERgreen transforms greenness from a mere measurement of environmental performance into an actively engaged and highly conscious lived reality resulting in a new way of experiencing and understanding the environment that is inherently more ecological Includes a foreward by Sanford Kwinter      **Sustainable Energy And Environmental Technologies - Proceedings Of The Third Asia Pacific Conference** Xijun Hu,Po Lock Yue,2000-11-28 With the rapid expansion of the Asia Pacific economy in the last decade and the recovery after the recent crisis severe demands will be placed on energy services and the environment Coping with the volatile oil prices that persist in the market introduces an additional factor into the energy supply and demand equation not just for countries in this region but also worldwide Inevitably there will be implications for environmental issues too The future will see a continuing challenge to balance growth with sustainability in the economic social and environmental sectors This conference a sequel to the immensely successful APCSEET conferences held in Singapore and Australia is aimed at meeting that challenge by addressing the pertinent issues related to sustainable energy and environmental protection It provides a forum for participants from academia industry and government agencies to interact report on research in progress and identify opportunities in the fields of sustainable energy and environmental technologies The presentations include not only technical issues such as air pollution control wastewater treatment solid waste management renewable energy and cleaner production but also education and policy issues      **Integrated**
