Water Pollution Issues and Developments Sarah V. Thomas, 2008 Pollution is undesirable state of the natural environment being contaminated with harmful substances as a consequence of human activities so that the environment becomes harmful or unfit for living things especially applicable to the contamination of soil water or the atmosphere by the discharge of harmful substances In addition to the harm to living beings both present or future and known or unknown pollution cleanup and surveillance are enormous financial drains of the economies of the world This book focuses on issues and developments critical for the field **African Environmental Crisis** Gufu Oba, 2020-03-13 This book explores how and why the idea of the African environmental crisis developed and persisted through colonial and post colonial periods and why it has been so influential in development discourse From the beginnings of imperial administration the idea of the desiccation of African environments grew in popularity but this crisis discourse was dominated by the imposition of imperial scientific knowledge neglecting indigenous knowledge and experience African Environmental Crisis provides a synthesis of more than one and a half century s research on peasant agriculture and pastoral rangeland development in terms of soil erosion control animal husbandry grazing schemes large scale agricultural schemes social and administrative science research and vector disease and pest controls Drawing on comparative socio ecological perspectives of African peoples across the East African colonies and post independent states this book refutes the hypothesis that African peoples were responsible for environmental degradation Instead Gufu Oba argues that flawed imperial assumptions and short term research projects generated an inaccurate view of the environment in Africa This book s discussion of the history of science for development provides researchers across environmental studies agronomy African history and development studies with a lens through which to understand the underlying assumptions behind development projects in Africa The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4 0 license Is There an Environmental Crisis? David L. Bender, 1986 A selection of articles discussing various aspects of the environmental problem including its history the causes and effects people s reactions and outlook for the future **Liberty and the Ecological Crisis** Katie Kish, Christopher Orr, Bruce Jennings, 2019-11-27 This

book examines the concept of liberty in relation to civilization's ability to live within ecological limits. Freedom in all its renditions: choice, thought, action has become inextricably linked to our understanding of what it means to be modern citizens. And yet it is our relatively unbounded freedom that has resulted in so much ecological devastation. Liberty has piggy backed on transformations in human nature, relationships that characterize the Anthropocene: increasing extraction of resources, industrialization, technological development, ecological destruction and mass production linked to global consumerism. This volume provides a deeply critical examination of the concept of liberty as it relates to environmental politics and ethics in the long view. Contributions explore this entanglement of freedom and the ecological crisis as well as investigate alternative modernities and more ecologically benign ways of living on Earth. The overarching framework for this collection is that liberty and agency need to be rethought before these strongly held ideals of our age are forced out. On a finite planet, our choices will become limited if we hope to survive the climatic transitions set in motion by uncontrolled consumption of resources and energy over the past 150 years. This volume suggests concrete political and philosophical approaches and governance strategies for learning how to flourish in new ways within the ecological constraints of the planet. Mapping out new ways forward for long term ecological well being, this book is essential reading for students and scholars of ecology, environmental ethics, politics and sociology and for the wider audience interested in the human Earth relationship and global sustainability.

Managing the Environmental Crisis William Russell Mangun, Daniel H. Henning, 1999. Second edition. With a new foreword by Lynton Keith Caldwell. In *Managing the Environmental Crisis*, William R. Mangun and Daniel H. Henning provide a balanced and comprehensive guide to the management of complex environmental and natural resource policy issues. Taking into account new developments, trends and issues that have arisen in recent years, the authors begin with the recognition, often overlooked, that it is not the environment that needs to be managed but human action relating to the environment. The authors review issues associated with a range of environmental policy concerns including energy considerations, renewable and non-renewable resource management, pollution control, wilderness management and urban and regional policy. The history of these issues, recent actions pertaining to their management, difficulties associated with their continued presence and the consequences of a failure to address these concerns are explored. Though focused on specific political issues, Mangun and Henning direct their attention to two large scale trends: globalization and the political polarization of the environmental movement. At the level of the decision making process, the incorporation of values specifically addressed from multicultural and cross disciplinary perspectives is also discussed. International in scope, the book provides descriptions of the roles of both governmental and nongovernmental organizations in the formulations and implementation of national and global environmental policy. This thoroughly revised second edition discusses various successes in the arenas of environmental cooperation and management strategy while pointing to the new challenges that have emerged in the last decade. *The Politics of Unsustainability* Ingolfur Bluhdorn, Ian Welsh, 2013-10-18. Two decades after its launch by the UN Brundtland

Commission the paradigm of sustainability seems to have reached its limits Whilst the concept figures more prominently in public debate and policy making than ever before the ecological footprint of advanced liberal consumer societies continues to grow and the forceful economic development of countries such as China and India reinforces concerns that the world is moving further away from rather than closer towards the ideal of sustainability Given the proven failure of ecological modernisation strategies to secure sustainability the traditional question How may our established lifestyles and socio economic practices be made more sustainable needs to be supplemented by a second equally important question How do advanced modern consumer democracies try and manage to sustain what is known to be unsustainable Put differently traditional research into the politics of sustainability needs to be supplemented by a new line of research into the politics of unsustainability Exploring the recent transformation of eco political discourses and a variety of ways in which the unfolding paradox of sustaining the unsustainable is being managed the present volume pioneers this new research agenda This book was previously published as a special issue of Environmental Politics

Environmental Crime Yingyi Situ, David Emmons, 2000 After defining environmental crime and discussing the extent of the environmental crisis this book explores the causes investigation prosecution and prevention of all types of environmental crime

Environmental Education and Advocacy Edward A. Johnson, Michael J. Mappin, 2005-03-03 Environmental education has often blurred the distinction between ecological science and environmental advocacy Growing public awareness of environmental problems and desire for action may be contributing to this blurring There is a need to clarify the distinction between the role of ecological science and the role of social and political values for the environment within environmental education This book addresses this need by examining the changing perspectives of ecology in education and the changing perspectives of education in environmental education Guidelines are provided for assessing the science and education perspectives within environmental education along with suggested frameworks for development of programs and resources that integrate current science education and action This book will be of interest to environmental educators ecologists interested in environmental education and curriculum and resource developers

Religion and Ecological Crisis Md. Abu Sayem, 2022-09-02 Religion and Ecological Crisis delves into the complex relationship between religions and ecology presenting Christian and Islamic perspectives on ecological issues through the work of John Boswell Cobb and Seyyed Hossein Nasr It examines how faith traditions of the world see and respond to our current unprecedented climate change issues This is the first comparative study of Cobb and Nasr's eco religious understanding and explores how their prescriptions can contribute alternatively to techno scientific initiatives in environmental sustainability Taking Cobb's economism and Nasr's scientism as the key concepts for surveying the roots of the ecological crisis the book offers interdisciplinary and interreligious insights into the debates about ecological equilibrium motivational awareness in human mind and about entanglements between religion and the environment This will be an insightful resource for policy makers faith leaders and for academics working in Environmental Studies and Religious

Unifying Geography David T. Herbert, John A. Matthews, 2004-08-05 It can be argued that the differences in content and approach between physical and human geography and also within its sub disciplines are often overemphasised The result is that geography is often seen as a diverse and dynamic subject but also as a disorganised and fragmenting one without a focus Unifying Geography focuses on the plural and competing versions of unity that characterise the discipline which give it cohesion and differentiate it from related fields of knowledge Each of the chapters is co authored by both a leading physical and a human geographer Themes identified include those of the traditional core as well as new and developing topics that are based on subject matter concepts methodology theory techniques and applications Through its identification of unifying themes the book will provide students with a meaningful framework through which to understand the nature of the geographical discipline Unifying Geography will give the discipline renewed strength and direction thus improving its status both within and outside geography
