## **Environmental Education Problems And Solutions:**

Environmental Education : Problems and Solutions Himanshu Vashist,2002-01-01 The basic and fundamental nature of environmental education is multidisciplinary and includes all factors related to environmental problems the study of man made and natural environment and is concerned with total human activity and his environment Thus environmental education refers not only to scientific problems such as contamination of water air and soil the detection surveillance and monitoring of pollutants and their impact on human health and on all other species but also to the socio economic and legal aspects of controlling the damage done to the environment which grows out of our dependence upon technology Consequently the social sciences humanities and law constitute a most significant part of the total spectrum of environmental education since how man choose to live his values and beliefs his interaction with others and his economic activity are intimately involved in causing of ecological problems and impose constraints which ultimately control the choice of governing institutions and enforcement mechanisms Hence environmental education studies programme must have holistic orientation

### **ENVIRONMENTAL EDUCATION Issues and Challenges** Dr. M. RAJAKUMAR,Dr.A. SELVARAJ,2017-04-08

Environmental education EE refers to organized efforts to teach about how natural environments function and particularly how human beings can manage their behavior and ecosystems in order to live sustainably **Environmental Education** KHRITISH SWARGIARY,2025-05-01 Environmental Education is an essential subject in the contemporary world especially given the alarming challenges that our planet faces due to environmental degradation resource depletion and climate change As the world s ecosystems are under unprecedented pressure from human activity it has become imperative that future generations are not only aware of these issues but are equipped with the knowledge and skills to tackle them The course Environmental Education offered under the Gauhati University Four Year Undergraduate Programme FYUGP aims to do precisely this to educate students on the relationship between humans and the environment the importance of environmental conservation and the urgent need for sustainable development This book Environmental Education is designed to serve as a comprehensive guide for students enrolled in the 5th semester of the Education course It delves into the fundamental concepts challenges and practices related to the environment with a particular emphasis on raising awareness about environmental hazards and promoting conservation efforts By the end of this course students will not only understand the crucial importance of the environment in human life but will also be equipped with the strategies to address the pressing environmental issues that threaten our planet Throughout this book I have made an effort to cover the major facets of Environmental Education which include a clear definition of environment the relationship between humans and the environment and human impact on ecological systems The book also explores significant environmental movements and projects such as the Chipko Movement the Silent Valley Project and the Narmada Valley Project illustrating how communities and governments have responded to environmental challenges The book further engages with environmental ethics and

sustainable development encouraging students to reflect on the moral aspects of environmental protection and consider the long term impacts of their actions on future generations Environmental Education is not merely a subject to be studied it is a call to action The information presented here aims to guide students in critically assessing the current state of the environment and to provide them with the knowledge required to make informed decisions that can benefit both society and the planet As they examine environmental hazards and pollution students are encouraged to reflect on the roles they can play in mitigating environmental degradation and promoting sustainability in their communities and beyond Incorporating the Sustainable Development Goals SDGs into the curriculum this book highlights the significance of goals such as Goal 7 Affordable and clean energy Goal 12 Responsible consumption and production and Goal 13 Climate action By integrating these global targets the book empowers students to think critically about their contributions to achieving a sustainable future The relevance of this course is not limited to academic success alone It is a crucial step in preparing students to become responsible global citizens who can contribute meaningfully to environmental stewardship As environmental concerns continue to shape policies economies and societies worldwide it is vital that young minds are engaged and equipped with the knowledge to confront these challenges with intelligence compassion and creativity In closing I hope that this book will serve as a valuable resource for students pursuing Environmental Education providing them with not just theoretical knowledge but also a practical understanding of the critical environmental issues we face today Together we can inspire a generation of thinkers and activists who are committed to protecting our planet for future generations Khritish Swargiary May 2025

*Environmental Education* Trilochan S. Bakshi, Zev Naveh, 2013-03-09 The environmental movement of the 1960s made educationists in some parts of the world aware of the significance and importance of ecology in curricula at all levels of education from kindergarten to post secondary A great deal of progress was made in the early 1970s in incorporating environmental awareness programs into educational systems so that what was once considered a fad was gradually becoming a part of formal education in a number of institutions especially in Canada and the U S A It was therefore appropriate that an international scientific body devote some time to the issue of ecology in education Early in 1976 I suggested to the International Association for Ecology Inteco1 that a symposium on Environmental Education be included in the program of the Second International Congress of Ecology scheduled to be held in Jerusalem in September 1978 In the first draft program of the Congress the topic was included as a poster session I considered this inadequate and appealed to the Congress Steering Committee to focus greater attention on environmental education The first draft program contained phrases like utilization of resources conservation problems environmental monitoring and irreversible changes These phrases more or less assumed that people in general understood ecological principles Literature on environmental education seems to suggest that a wide gap separated most of the professional ecologists from a large portion of mankind primarily because we the ecologists have paid scant attention to the ecological education of world's citizens **Environmental**
