Sustainable Environmental Management: Lessons from Indonesia
Jatna Supriatna, Ralph Lenz, 2022-10-19

The climate change threat at present has reached a critical stage The development of the world today is threatened as the whole world including Indonesia is facing three crisis namely the economic crisis post COVID 19 Pandemic energy crisis caused by the war in Ukraine and lastly the climate crisis Many world leaders are unaware of the severity of the threat of climate change which has now transformed into a climate crisis The derivative of the climate crisis will not only contribute to worsening of the economic crisis and energy crisis but will quickly shifted into a biodiversity catastrophe drinking water scarcity and the global hunger crisis In turn a political crisis might arose in the form of a denial of the government s authority which was deemed unable to overcome these crises This bleak picture requires a thorough study and solution that is effective but at the same time reaches sustainability and penetrates the future We are blessed to read Prof Jatna and Prof Lenz s Masterpiece Magnus Opus in the form of a book with more than 600 pages that relate to these problems and crises in a series of meanings We should salute them for providing a clear and comprehensive picture of the interrelationships between regions disciplines and elements both in terms of origin and the possibility of solving the problem The presentation is presented comprehensively without letting go of the details and context regarding sustainability and the global picture I am sure that many people especially those in a strong position can benefit and be given references from the essential things presented in this book the great work of both authors which I am proud of Prof Rachmat Witoelar Indonesia s President s Special Envoy for Climate Change 2015 2019 and advisor to I SER UI and CAIPSDCC The concept of sustainable development is a development concept that ensures the fulfillment of the human needs of the present generation without compromising the ability of future generations to meet their needs That is the idea of sustainable development emphasizes the development of technologies that can increase productivity and reduce the level of damage The concept of sustainable development is an effort to integrate three aspects of life namely social economic and environmental in a synergistic relationship supported by infrastructure and institutions This concept is in line with the avoidance of shell game theory where shell game theory solves the problem by creating another problem The book written by Prof Jatna Supriatna and his colleague Prof Ralph Lenz from the United States on environmentally sustainable development in Indonesia is very well written It suits students environmental experts planning bureaucrats and legislature members Plus those who are doing development planning both at home and abroad Each environmental problem is described in detail and clarity and the solution options are given so that sound environmental management can be sustainable Prof Satriyo Brodjonegoro President of Indonesian Academy of Sciences Indonesia is an archipelago country that harbors natural resources It is among the

countries with the most complete and extensive natural resource base perhaps trailing only Brazil Still using natural resources as input for current production processes has increased yearly depletion With its abundant natural resources Indonesia should have become a prosperous country from an economic perspective But yearly rising levels of natural resource depletion in many regions of the country have occurred without an increase in equitable human welfare those words that I picked up from Prof Jatna Supriatna and his friend s book I support this book s aim that environmental sustainability is necessary for Indonesia This book should be read not only by students Environment NGOs and lecturers but also decision makers Dede Djuhana Ph D Dean of Faculty of Mathematics and Natural Sciences Universitas Indonesia *Protocol on Environmental Management for Sustainable Development* Southern African Development Community,2014 Sustainable Product Development Daizhong Su,2020-05-12 This book offers a comprehensive review of sustainability and product design providing useful information on the relevant regulations and standards for industries to meet increasing market demands for eco products while reducing their impact on the environment The examples and methods presented allow readers to gain insights into sustainable products The authors also explain how to develop products with sustainability features by applying tools and methods for sustainable design and manufacture These tools methods include Regulations directives related to sustainable product development Popular lifecycle analysis software packages Environmental and social lifecycle impact assessment methods Lifecycle inventory databases Eco point and eco accounting infrastructure ICT and traceability technologies for sustainable product development Sustainable design and manufacture Integrated approach for sustainable product development A description of each sustainability tool is accompanied by easy to understand guidelines as well as sustainable product development methods Five different case studies are also presented to illustrate how to apply the tools and methods into the development of real sustainable products In view of the increasing pressure on industries to meet the sometimes conflicting demands of the market and environment this book is a valuable resource for engineers and managers in manufacturing companies wishing to update their knowledge of sustainable product development It is also suitable for researchers and consultants who are involved or interested in sustainable product development as well as for students studying sustainable development production and engineering management The Environment, Employment and Sustainable Development Monica Hale,Mike Lachowicz,2002-01-08 Environmental policies and initiatives have had a significant impact on businesses and employment practices across Europe The Environment Employment and Sustainable Development is a wide ranging collection featuring contributions by academics and practitioners from countries including the UK Spain Switzerland France Belgium The Netherlands and Ireland Subjects covered include the effects of EU environmental directives programmes and legislation and global conventions and agreements assessment of environmental training education and qualifications across Europe national and international case studies the commercial logic for businesses in going green examination of the growth in the public and private sector of career opportunities for those with environmental

expertise **Environmental Law in Development** N. Niessen, 2006-01-01 an important addition to the small but growing published literature on the development of environmental law in developing countries It will be of interest to academics and those involved in law development in Indonesia and the other developing countries Jennifer Mohamed Katerere Journal of Environmental Law This book asks whether environmental law and policy in developed countries can be successfully transferred to developing countries It questions whether developing countries are indeed ready and able to implement new ideas from the developed world such as the integration of environmental law and use of market oriented instruments The authors draw insights from the case of Indonesia where they have experience of drafting environmental legislation and which is itself in the early stages of development Through these insights they seek to understand why environmental law that has been well developed in theory can in practice be difficult to monitor and adequately enforce Indeed a further question central to the book is why developing environmental law does not necessarily result in an efficient environmental policy Taking a comparative perspective and using a multi faceted methodology that draws on constitutional and administrative law human rights law criminal and liability law and international law as well as law and economics the authors conclude with an outline of some of the lessons that can be learnt by other jurisdictions seeking to develop environmental law Lawyers environmental engineers and social scientists involved in environmental law and policy in developing countries will find much to interest them in this book as will those concerned with development studies or with a particular interest in the case of Indonesia
