Hamid,Azman Azwan Azmawati,Jamilah Hj. Ahmad,Nik Norma Nik Hasan,2014-11-25 There is a dearth of literature on environmental communication within the non western world The few existing ones are scattered and not easily available

Thus there is a dire need to document research and literature in the field. The opportunity arose at the 2009 International Conference on Communication and Environment held in Penang, Malaysia. The international conference with the theme 'Transformation for a Sustainable Tomorrow' organised by the School of Communication, Universiti Sains Malaysia (USM), attracted scholars, practitioners and activists from around the world to listen and deliberate on various aspects of communication and environment. The post-conference review resulted in the selection of 24 papers to be compiled into this edited volume. The escalating degradation of environment locally and globally was the main concern that prompted discussions on how sustainability can be advocated. The development process in many countries, economic activities and political decisions on issues such as deforestation for timber logging, rapid urbanisation, pertinently points out that environmental degradation and any communication on environmental change has to be grounded and located within the wider context of social politics and economics of the society. Communication and environmental communication for that matter have also to be understood within these wider contexts. Many would agree that a constant and consistent flow of information communicated through different channels to different stakeholders at the right time and destinations can help raise awareness and consciousness of environmental problems, protection and preservation. This vital information can enable the public and stakeholders to make informed choices and take actions whenever possible. A lack of communication and information will inordinately exacerbate the situation of environmental degradation. This book thus highlights how the environment is being treated in the media communicated to the society and impacted nations. The chapters are grouped into the following sections: Theoretical and conceptual issues; Media content and the environment; Politics, communication and the environment; Corporate social and environmental responsibility; and Citizen participation, human rights and the environment. The editors acknowledge the excellent contributions of all the authors and are indebted to the members of the review panel, the external reviewer, USM Publications Committee and staff of Universiti Sains Malaysia Press for their help in ensuring the quality of this volume. Most importantly, we express our gratitude to USM for providing the financial support for the international conference and making it possible to publish this book. The Editors: January 2012, Universiti Sains Malaysia, Penerbit Universiti Sains Malaysia.

*Environmental Pollution and the Media* Glenn D. Hook, Libby Lester, Meng Ji, Kingsley Edney, Chris G. Pope, Luli van der Does-Ishikawa, 2017-04-07. This book offers a theoretically informed empirical investigation of national media reporting and political discourse on environmental issues in Australia, China and Japan. It illuminates the risks, harms and responsibilities associated with climate change through an analysis of pollution, adopting an interdisciplinary approach drawing on both the social sciences and humanities. A particular strength of the work is the detailed analysis of the data using a range of both quantitative and qualitative techniques, enabling the authors to reveal in rich and compelling detail the complex relationship between risk and responsibility in the climate change discourse. The case studies of Australia, China and Japan are set in the current literature as well as in the historical context of climate change in these three countries. The

analysis of the media discourse on the Great Barrier Reef in Australia demonstrates how the mining of coal for overseas markets has led to devastating harm to the life of the reef A critical discussion of the Chinese documentary Under the Dome shows how this medium has played a crucial role in building awareness of the harm from atmospheric pollution among the citizens shaping attitudes and promoting action The first case study of Japan elucidates how cross border atmospheric pollution from China forges a chain of responsibility for responding to climate change running from the state to society The other case study of Japan demonstrates how smart cities have emerged as a way to mitigate the risks and harms of climate change The Conclusion draws together the similarities and differences in how climate change is addressed in the three countries In all Environmental Pollution and the Media Political Discourses of Risk and Responsibility in Australia China and Japan uncovers the dynamics of the triadic relationship among risk harm and climate change in Australia China and Japan By so doing the book makes an original and timely contribution to understanding comparative media discourse and political debates on climate change

**Social and Environmental Issues in Advertising** Sukki Yoon,Sangdo Oh,2018-10-11 In the past few decades attention has turned to the need to apply commercial marketing concepts knowledge and techniques to promote goods services and actions that enhance consumer well being and social welfare through socially and environmentally responsible advertising for example recycling promotions Critics argue however that for profit advertisers who endorse social responsibility are inherently serving commercial purposes and diluting the value of socially responsible advertising Scholars in many fields advertising marketing communications and psychology explore ways to encourage consumers companies and policymakers to adopt socially responsible behaviours and to provide theoretical and practical insights regarding effective applications of pro social and pro environmental marketing messages This book comprises ten chapters that contribute to advertising theory research and practice by providing an overview of current and diverse research that compares contrasts and reconciles conflicting views regarding social and environmental advertising uncovering individual differences in perception of advertising messages and their consequences for social and environmental behaviours reconciling societal and business interests identifying a message factor that determines eco friendly behaviours and identifying source factors that enhance and weaken advertising effectiveness This book was originally published as a special issue of the International Journal of Advertising

*Environmental Management of the Media* Pietari Kääpä,2018-05-23 In recent years the widely held misconception of the media as an ephemeral industry has been challenged by research on the industry s significant material footprint Despite this material turn no systematic study of this sector has been conducted in ways that considers the role of the media industries as consumers and users of a range of natural resources Filling this gap Environmental Management of the Media discusses the environmental management of the media industries in the UK and the Nordic countries These Nordic countries both as a set of small nations and as a regional constellation are frequently perceived as some of the greenest in the world yet not only is the footprint of the media industries practically ignored in

academic research but the very real stakes of the industries global impact are not comprehensively understood Here the author focuses on four key areas for investigating the material impact of Nordic media 1 resources used for production and dissemination 2 regulation of the media 3 organizational management and 4 labour practices By adopting an interdisciplinary perspective that combines ecocritical analysis with interrogation of the political economy of the creative industries K p argues that taking the industries to task on their environmental footprint is a multilevel resource and organizational management issue that must be addressed more effectively in contemporary media studies This book will be of great interest to students and scholars of media communication and environmental studies
