Cost evaluation strategies for technologies tested under the environmental technology verification program , Global Environmental Commons Eric Brousseau, Tom Dedeurwaerdere, Pierre-André Juvet, Marc Willinger, 2012-07-26

Environmental challenges and the potential solutions to address them have a direct effect on living standards the organization of economies major infrastructures and modes of urbanization Since the publication of path breaking contributions on the governance of environmental resources in the early 1990s many political initiatives have been taken numerous governance experiments have been conducted and a large multi disciplinary field of research has opened up This interdisciplinary book takes stock of the knowledge that has accumulated to date and addresses new challenges in the provision of environmental goods It focuses on three essential dimensions with respect to governance First it addresses the issue of designing governance solutions through analyzing systems of rules and levels of organization in the governance and management of environmental issues Second it draws renewed attention to the negotiation processes among stakeholders playing a crucial role in reaching agreements over issues and solutions and in choosing and implementing particular policy instruments Finally it shows that compliance depends on a combination of formal rules enforced by recognized authorities and informal obligations such as social and individual norms The evolution of the research frontiers on environmental governance shows that more legitimate and informed processes of collective decision and more subtle and effective ways of managing compliance can contribute to more effective policy However this book also illustrates that more democratic and effective governance should rely on more direct and pluralistic forms of involvement of citizens and stakeholders in the collective decision making processes

The

Perception of the Environment Tim Ingold, 2021-11-29 In this work Tim Ingold offers a persuasive new approach to understanding how human beings perceive their surroundings He argues that what we are used to calling cultural variation consists in the first place of variations in skill Neither innate nor acquired skills are grown incorporated into the human organism through practice and training in an environment They are thus as much biological as cultural To account for the generation of skills we have therefore to understand the dynamics of development And this in turn calls for an ecological approach that situates practitioners in the context of an active engagement with the constituents of their surroundings The twenty three essays comprising this book focus in turn on the procurement of livelihood on what it means to dwell and on the nature of skill weaving together approaches from social anthropology ecological psychology developmental biology and phenomenology in a way that has never been attempted before The book is set to revolutionise the way we think about what is biological and cultural in humans about evolution and history and indeed about what it means for human beings at once organisms and persons to inhabit an environment The Perception of the Environment will be essential reading not only for anthropologists but also for biologists psychologists archaeologists geographers and philosophers This edition includes a new Preface by the author

The Philosophy of Sustainable Design Jason F. McLennan, 2004 The author outlines the major ideas and issues that have emerged in the growing movement of green architecture and sustainable design over the last thirty years The book asks individuals to understand how the philosophy of sustainable design can affect their own work

Evaluation of the Built Environment for Sustainability Vincenzo Bontivegna, P.S. Brandon, Patrizia Lombardi, 2003-09-02 Sustainability in the built environment is a major issue facing policy makers planners developers and designers in the UK Europe and worldwide The measuring of buildings and cities for sustainability becomes increasingly important as pressure for green sustainable development translates into policy and legislation The problems of such measurement and evaluation are presented by the authors in contributions which move from the general to the particular e g from a general framework for an environmentally sustainable form of urban development to a specific input output model application to environmental problems The book is divided into three parts the first covers city models and sustainable systems research programmes environmental policies green corporations and collaborative strategies to make urban development more sustainable part two discusses the problems of evaluating the built environment in planning and construction covering economic and environmental methods and construction development and regeneration processes part three illustrates a number of applications using different approaches and techniques and referring to a range of environmental aspects of the natural and built environment from maintaining historic buildings to transport management and air pollution monitoring

Applications of Environmental Aquatic Chemistry Eugene R. Weiner, 2008-01-17 Professionals and students who come from disciplines other than chemistry need a concise yet reliable guide that explains key concepts in environmental chemistry from the fundamental science to the necessary calculations for applying them Updated and reorganized

Applications of Environmental Aquatic Chemistry A Practical Guide Second Edition **Rationality for Mortals** Gerd Gigerenzer, 2010-04-16 Gerd Gigerenzer's influential work examines the rationality of individuals not from the perspective of logic or probability but from the point of view of adaptation to the real world of human behavior and interaction with the environment. Seen from this perspective, human behavior is more rational than it might otherwise appear. This work is extremely influential and has spawned an entire research program. This volume, which follows on a previous collection, *Adaptive Thinking*, also published by OUP, collects his most recent articles looking at how people use fast and frugal heuristics to calculate probability and risk and make decisions. It includes a newly written substantial introduction and the articles have been revised and updated where appropriate. This volume should appeal like the earlier volumes to a broad mixture of cognitive psychologists, philosophers, economists, and others who study decision making.

Handbook of Research on Energy and Environmental Finance 4.0 Rafay, Abdul, 2022-02-18 Energy and environmental finance (EEF) is an emerging global phenomenon. During the last few decades, many countries started monitoring EEF practices. Major components of these practices include costs, fraud, scandals, and more. Among several problems, the most prevalent is the lack of awareness about the issues of EEF among various stakeholders. The *Handbook of Research on Energy and Environmental Finance 4.0* is an international reference that provides understanding and lessons learned in all aspects of EEF in individual, organizational, and societal experiences. This book examines research in the shape of experience, implementation, and application. Covering topics such as clean power, energy poverty, and environmental degradation, this book is a dynamic resource for academicians, researchers, professionals who work within the domains of EEF, EEF regulators, scholars of EEF, managers involved in EEF organizations, law practitioners involved in EEF regulations, auditors involved in audit and control systems of EEF, university professors, and students pursuing studies and research in EEF.

Inequality, Democracy, and the Environment Liam Downey, 2015-12-18 Winner American Sociological Association Section on Environment and Technology Allan Schnaiberg Outstanding Publication Award. The world currently faces several severe social and environmental crises, including economic underdevelopment, widespread poverty and hunger, lack of safe drinking water for one sixth of the world's population, deforestation, rapidly increasing levels of pollution, and waste. Dramatic declines in soil fertility and biodiversity and global warming. *Inequality, Democracy, and the Environment* sheds light on the structural causes of these and other social and environmental crises, highlighting in particular the key role that elite-controlled organizations, institutions, and networks play in creating these crises. Liam Downey focuses on four topics: globalization, agriculture, mining, and U.S. energy and military policy, to show how organizational and institutional inequality and elite-controlled organizational networks produce environmental degradation and social harm. He focuses on key institutions like the World Bank, the International Monetary Fund, the U.S. Military, and the World Trade Organization to show how specific policies are conceived and enacted in order to further elite goals. Ultimately, Downey lays out a path for environmental social scientists and environmentalists to better

understand and help solve the world's myriad social and environmental crises **Inequality Democracy and the Environment** presents a passionate exposé of the true role inequality, undemocratic institutions and organizational power play in harming people and the environment

Forecasts And Environmental Decision Making Paul J. Culhane, 2019-03-05 This book evaluates the predictive accuracy of the forecasts in a sample of federal environmental impact statements. It examines a major federal attempt to impose rationalistic reforms on government decision makers and the first view of National Environmental Policy Act reforms

Gut Feelings Gerd Gigerenzer, 2008-06-24 Why is split second decision making superior to deliberation? **Gut Feelings** delivers the science behind Malcolm Gladwell's *Blink*. Reflection and reason are overrated according to renowned psychologist Gerd Gigerenzer. Much better qualified to help us make decisions is the cognitive emotional and social repertoire we call intuition: a suite of gut feelings that have evolved over the millennia specifically for making decisions. Gladwell drew heavily on Gigerenzer's research. But Gigerenzer goes a step further by explaining just why our gut instincts are so often right. Intuition, it seems, is not some sort of mystical chemical reaction but a neurologically based behavior that evolved to ensure that we humans respond quickly when faced with a dilemma.

Environmental Issues Today Robert J. Duffy, Susan M. Opp, 2020-11-09 This two volume set provides an authoritative overview of the major environmental issues of the 21st century with a special focus on current challenges, trends and policy choices. This set provides an up to date comprehensive and focused resource for understanding the nature and scope of environmental challenges facing the United States and the world in the 21st century as well as options for meeting those challenges. Volume One covers environmental trends and challenges within the United States while Volume Two illuminates environmental issues and choices around the world. Issues covered in both volumes include vital topics such as climate change, air and water pollution, natural resource and species protection, and agricultural/industrial impacts on the environment and public health. For all topics, the authors, scholars and experts hailing from a wide range of environmental and policy fields, detail a range of political, social and economic options for the future and explain why the issue in question is important for society and people as well as the natural world.
