Environmental Science In Building:

Environmental Science in Building Randall McMullan, 2017-12-01 This popular textbook covers how the built environment and the management of energy relate to the quality of human living conditions and the environmental performance of buildings. It is the key introductory text for understanding the principles and theories of the environmental science behind construction and the only text on the market to provide the basic scientific principles of such a broad range of topics. The text covers a range of areas in the field including climate change, energy management and sustainability in construction, with an important focus on contemporary environmental topics such as carbon lifetime performance and rating schemes. The author is known for his extremely clear, finely crafted text, and the book offers a wealth of excellent worked examples. This text is designed to be useful at all levels to students and practitioners of architecture, construction studies, building services, surveying and environmental science. New to this Edition: Expansion upon the environmental narrative with coverage of contemporary topics such as carbon lifetime performance and rating schemes. Additional figures, images and sub-topics in chapters. An updated section on building services to give a broader understanding of modern building services, equipment, options, specifications and performance implications. Inclusion of a new section which offers commentary on the future of environmental science in building.

Building an Effective Environmental Management Science Program Committee on Building an Environmental Management Science Program, Commission on Geosciences, Environment and Resources, Division on Earth and Life Studies, National Research Council, 1997-04-02 This book assesses the Department of Energy's Environmental Management Science Program, a new program that funds basic research related to environmental cleanup of the department's weapons complex. The authoring committee was established to advise the department on the structure and management of the program. The book provides recommendations on long-term challenges and opportunities for the program.

Building STEM Skills Through Environmental Education Schroth, Stephen T., Daniels, Janese, 2020-09-18 Environmental studies provide an ideal opportunity for children of any age to build critical and creative thinking skills while also building skills in science, technology, engineering, and mathematics. STEM Exploring issues related to sustainability and environmental concerns permits learners to identify problems, develop research questions, gather and analyze data, develop possible solutions, and disseminate this information to others. Despite the advantages of green education and its ability to improve student achievement, there is a gap in understanding the interplay between curriculum and instruction and how this affects teaching and learning. *Building STEM Skills Through Environmental Education* is an essential publication that addresses gaps in the understanding of green education and offers educators meaningful and comprehensive examples of environmental and sustainability education in the Pre-K through secondary grade levels. The book offers a unique combination of foundational understanding of green education and chapters that illustrate the principles and impact of green education across grade

levels content areas assessment systems instructional strategies technology and other related topics It is ideally designed for educators curriculum developers instructional designers advocates policymakers researchers academicians and students

Building Materials for Sustainable and Ecological Environment Varenayam Achal, Chee Seong Chin, 2021-05-28 This book uses theories hypotheses policies practical insights and case studies to introduce and elucidate green building materials for sustainable construction Cement is the most widely used building material in construction however it is not sustainable being responsible for 7% of global carbon dioxide emissions and consuming huge quantities of energy In order to limit the ecological damage sustainable building materials are needed Ecosystems are a source of important lessons and models for transitioning the built environment onto a sustainable path that opens options for sustainable building material in construction The book provides a guide for readers seeking knowledge on sustainable building materials with the potential to lower environmental impact by reducing CO2 emission throughout the building s lifecycle The book is motivated by recent rapid advances in sustainable building materials production including green building materials made of industrial by products and recycled wastes earth materials plant based materials microbial based materials or supplementary cementitious materials to reduce the environmental impacts of traditional building materials Discussing the development and applications of various sustainable building materials including related case studies and addressing the environmental issue with a holistic and systematic approach that creates an ecology of construction for sustainability in infrastructures it offers promising solutions to achieve renewable and sustainable building materials for the future

Building for Life Stephen R. Kellert, 2012-09-26 Sustainable design has made great strides in recent years unfortunately it still falls short of fully integrating nature into our built environment Through a groundbreaking new paradigm of restorative environmental design award winning author Stephen R Kellert proposes a new architectural model of sustainability In Building For Life Kellert examines the fundamental

interconnectedness of people and nature and how the loss of this connection results in a diminished quality of life This thoughtful new work illustrates how architects and designers can use simple methods to address our innate needs for contact with nature Through the use of natural lighting ventilation and materials as well as more unexpected methodologies the use of metaphor perspective enticement and symbol architects can greatly enhance our daily lives These design techniques foster intellectual development relaxation and physical and emotional well being In the works of architects like Frank Lloyd Wright Eero Saarinen Cesar Pelli Norman Foster and Michael Hopkins Kellert sees the success of these strategies and presents models for moving forward Ultimately Kellert views our fractured relationship with nature as a design problem rather than an unavoidable aspect of modern life and he proposes many practical and creative solutions for cultivating a more rewarding experience of nature in our built environment

Sustainable Construction Materials and Technologies Yoon-Moon Chun,Peter Claisse,Tarun R. Naik,Eshmaiel Ganjian,2020-11-25 The construction materials industry

is a major user of the world's resources. While enormous progress has been made towards sustainability, the scope and opportunities for improvements are significant. To further the effort for sustainable development, a conference on Sustainable Construction Materials and Technologies was held at Coventry University, Coventry, U.K. from June 11th-13th, 2007, to highlight case studies and research on new and innovative ways of achieving sustainability of construction materials and technologies. This book presents selected important contributions made at the conference. Over 190 papers from over 45 countries were accepted for presentation at the conference, of which approximately 100 selected papers are published in this book. The rest of the papers are published in two supplementary books. Topics covered in this book include sustainable alternatives to natural sand, stone and Portland cement in concrete; sustainable use of recyclable resources such as fly ash, ground municipal waste slag, pozzolan, rice husk ash, silica fume, gypsum, plasterboard, drywall and lime in construction; sustainable mortar, concrete, bricks, blocks and backfill; the economics and environmental impact of sustainable materials and structures; use of construction and demolition wastes and organic materials; straw bale, hemp, etc. in construction; sustainable use of soil, timber and wood products and related sustainable construction and rehabilitation technologies.
