Environmental Life Cycle Assessment of Goods and Services Chris T. Hendrickson, Lester B. Lave, H. Scott

Matthews, 2010-09-30 Environmental life cycle assessment is often thought of as cradle to grave and therefore as the most complete accounting of the environmental costs and benefits of a product or service However as anyone who has done an environmental life cycle assessment knows existing tools have many problems data is difficult to assemble and life cycle studies take months of effort A truly comprehensive analysis is prohibitive so analysts are often forced to simply ignore many facets of life cycle impacts But the focus on one aspect of a product or service can result in misleading indications if that aspect is benign while other aspects pollute or are otherwise unsustainable This book summarizes the EIO LCA method explains its use in relation to other life cycle assessment models and provides sample applications and extensions of the model into novel areas A final chapter explains the free easy to use software tool available on a companion website www.eiolca.net The software tool provides a wealth of data summarizing the current U S economy in 500 sectors with information on energy and materials use pollution and greenhouse gas discharges and other attributes like associated occupational

Environmental Innovation and Ecodesign Romain Debref, 2018-08-01 The end of the post war economic boom was marked by the recognition of the environmental problem with the oil crises of the 1970s and in 1972 the first major UN conference devoted to the human environment Successive international meetings have resulted in a context where technical change innovation and industry have assumed a central place in the creation of a new model of society Against this consensus the author demonstrates from economic analysis and wide ranging examples that the environmental innovation doctrine and ecodesign methods remain fragile and can lead to paradoxical results

Principles of Environmental Sciences Jan J. Boersema, Lucas Reijnders, 2008-12-12 International experts provide a comprehensive picture of the principles concepts and methods that are applicable to problems originating from the interaction between the living non living environment and mankind Both the analysis of such problems and the way solutions to environmental problems may work in specific societal contexts are addressed Disciplinary approaches are discussed but there is a focus on multi and interdisciplinary methods A large number of practical examples and case studies are presented There is special emphasis on modelling and integrated assessment This book is different because it stresses the societal cultural and historical dimensions of environmental problems The main objective is to improve the ability to analyse and conceptualise environmental problems in context and to make readers aware of the value and scope of different methods Ideal as a course text for students this book will also be of interest to

Waste and Environmental Policy Massimiliano Mazzanti, Anna Montini, 2011 This research deals with the increasingly complex issues of waste generation waste management and waste disposal that in less developed industrialised countries present diverse but critical concerns It takes a socio economic and policy oriented perspective and provides empirical evidence at EU and regional level The EU and Italy are taken as relevant case studies given the disparities in environmental performances between less and more developed areas The rich and various empirical evidence shows that a robust delinking between waste generation and economic growth is still not present thus future policies should directly address the problem at the source by targeting waste generation in EU countries Some structural factors like population density and urbanisation present themselves as relevant drivers of both waste management and landfill diversion Nevertheless economic and structural factors alone are not sufficient to improve waste performances Though waste policies are to be redesigned by covering the entire area of waste management some first signals of policy effectiveness are arising This work will be of most interest to those students of environmental economics and environmental sciences as well as policy makers waste utility managers and companies in the waste management sector
