Environments For Health:

Environments for Health John J Macdonald, University of Western Sydney, Australia, 2012-05-23 John Macdonald once again turns the traditional approach to health care on its head. Instead of merely diagnosing and managing disease, he urges health services and indeed society to foster health and articulates a vision of a health promoting a salutogenic society. Dimity Pond School of Medical Practice and Population Health, University of Newcastle, Australia. The vast proportion of cash spent on health care by governments and individuals in the world is spent on systems that are based on a more or less Westernized acute care model. The imbalance of these systems with their overemphasis on cure as opposed to care and prevention or maintenance of health is well documented. Salutogenic health care takes a holistic view of the individual as part of a social and environmental continuum rather than as an isolated packet of symptoms and seeks to reassess the very meaning of health. There are some indications that we as a global culture are moving towards this new salutogenic model but the speed of the movement has to be accelerated. This book sets out to chart the main steps of this movement and to indicate some of the ways of thinking and action which can help form new ways of approaching health care. Outdoor Environments for People with Dementia Susan Rodiek, Benjamin Schwarz, 2013-04-15 Learn how gardens and parks can be beneficial to residents. Mounting evidence reveals that nature and outdoor environments provide individuals with dementia greater enjoyment in life, lower stress levels, and positive changes to physical well-being. *Outdoor Environments for People with Dementia* explores how fulfilling the fundamental genetically based need of human relationships with nature can improve the health and well-being of people with dementia. Top experts analyze current research and comprehensively examine how the design processes of gardens and parks can be closely connected to effective interventions. Evaluation tools for those with dementia are discussed, including studies of the impact of plants and outdoor activities on this population. *Outdoor Environments for People with Dementia* discusses in detail practical approaches that can significantly improve the quality of life for dementia victims. Research is discussed, revealing important aspects and issues needing to be addressed when creating better outdoor environments that are effective in helping residents of long-term care facilities and residential care homes. The text is extensively referenced and provides several tables, figures, and photographs to clearly illustrate concepts. Topics discussed in *Outdoor Environments for People with Dementia* include the impact of outdoor wandering, parks, and therapeutic gardens on people with dementia; empirical studies on how access to and participation in nature-related activities can benefit people with dementia; interventions to restore people with dementia having directed attention fatigue; evaluation tools for gardens for people with dementia; research-based design recommendations for future gardens; theories and empirical studies about healing gardens; training staff to increase their knowledge about horticulture and encouraging them to involve residents in outdoor activities; general guidelines for developing an outdoor space; examination of the attributes for the superior outdoor space found in Grand Rapids, Michigan.
