Cretaceous-Tertiary High-latitude Palaeoenvironments Jane E. Francis, Duncan Pirrie, J. Alistair Crame, 2006 High latitude settings are sensitive to climatically driven palaeoenvironmental change and the resultant biotic response Climate change through the peak interval of Cretaceous warmth Late Cretaceous cooling onset and expansion of the Antarctic ice sheet and subsequently the variability of Neogene glaciation are all recorded within the sedimentary and volcanic successions exposed within the James Ross Basin Antarctica This site provides the longest onshore record of Cretaceous Tertiary sedimentary and volcanic rocks in Antarctica and is a key reference section for Cretaceous Tertiary global change The sedimentary succession is richly fossiliferous yielding diverse invertebrate vertebrate and plant fossil assemblages allowing the reconstruction of both terrestrial and marine systems The papers within this volume provide an overview of recent advances in the understanding of palaeoenvironmental change spanning the mid Cretaceous to the Neogene of the James Ross Basin and related biotic change and will be of interest to many working on Cretaceous and Tertiary palaeoenvironmental change

Source Variation and Ground Accessibility of Magnetospheric Mid-latitude ELF/VLF Chorus and Hiss Daniel Irving Golden, 2011 The distribution of relativistic electrons that form the Earth's radiation belts is extremely variable with the trapped ux changing by several orders of magnitude on timescales of a few hours to days These energetic particles pose a significant hazard to satellites and astronauts in the near Earth space environment The dynamic evolution of the radiation belts is believed to be controlled in large part by two separate but related classes of naturally occurring plasma waves extremely low frequency very low frequency ELF VLF chorus and hiss This dissertation explores characteristics of chorus and hiss observed at Palmer Station Antarctica with the goal of improving our ability to differentiate between variations in emission generation and the effects of emissions propagation to the ground Results are presented from a two part study consisting of both observations and modeling which explores the manner in which the plasmopause affects the propagation of chorus from its magnetospheric source to the ground Results indicate that

the observed chorus propagates in a non ducted mode which is contrary to a long standing belief that guiding structures are necessary for chorus to propagate to the ground This newly explored mode of ground propagation indicates that ground stations may be able to observe a larger portion of waves than previously thought and provides for a more accurate interpretation of ground observed waves and their influence on energetic particle distributions Following this an automated system of detecting chorus and hiss in broadband ELF VLF data using neural networks is discussed Results of running the automated detector on ten years of data are discussed including diurnal seasonal and solar cyclical variations of emissions

Queering the Moderns NA NA,2016-04-30 In Queering the Moderns Anne Herrmann revisits the narrative of literary modernism and the historical uses of the term queer to explore the emergence of identities specific to modernism Queer in the modernist period 1910 1945 means strange odd out of sorts and although it begins to refer to those who are queer sexually it does not yet police a hetero homosexual divide It means crossing boundaries in unexpected directions across the Atlantic across the color line across literary conventions that dictate autobiographies can t be written by someone else Six memoirs that rely on cross gender and cross racial identifications are discussed within their specific cultural contexts so that female aviators Amelia Earhart and Beryl Markham lesbian auto biographers Virginia Woolf and Gertrude Stein and male auto ethnographers James Weldon Johnson and Earl Lind Ralph Werther begin to queer the traditional spaces of modernism

Latitude Nicholas Crane,2021-10-05 Latitude is a gloriously exciting tale of adventure and scientific discovery that has never been told before Crane the former president of the Royal Geographic Society documents the remarkable expedition undertaken by a group of twelve European adventurer scientists in the mid eighteenth century The team spent years in South America scaling volcanoes and traversing jungles before they achieved their goal of establishing the exact shape of the Earth by measuring the length of 1 degree latitude at the equator Their endeavors were not limited to this one achievement Not only did their discovery open up the possibility for safe accurate navigation across the seas they also discovered rubber and quinine With a narrative that reads like it was taken from the script of an adventure movie Nicholas Crane brings to life a narrative that is a timely remind of how scientific discovery can change the world and our future By knowing the shape of the earth we can create maps survive the oceans navigate the skies and travel across the globe Without latitude maps and navigation wouldn t be accurate lives would have been lost and exact locations of cities and rivers would never be known After ten grueling years in search of a magic number the survivors returned to Europe with their historical discovery and fueled the public s interest in science Twent five years ago Dava Sobel s bestselling Longitude was a global publishing phenomenon yet it told only one half of the story With Latitude this cornerstone piece of our shared history is now complete with this tale of a trip that changed the course of human civilization Filled with raw excitement and danger Latitude brings the challenges that faced these explorer scientists to vivid life

Stanley in Africa James P. Boyd,2024-11-23 Victor Hugo says that Africa will be the continent of the twentieth century Already the nations are struggling to possess it Stanley s explorations proved the majesty and efficacy of equipment and force amid these dusky peoples and through the awful mazes of the unknown Empires watched with eager eye the progress of his last daring journey Science and civilization stood ready to welcome its results He comes to light again having escaped ambush flood the wild beast and disease and his revelations set the world aglow He is greeted by kings hailed by savants and looked to by the colonizing nations as the future pioneer of political power and commercial enterprise in their behalf as he has been the most

redoubtable leader of adventure in the past This miraculous journey of the dashing and intrepid explorer completed against obstacles which all believed to be insurmountable safely ended after opinion had given him up as dead together with its bearings on the fortunes of those nations who are casting anew the chart of Africa and upon the native peoples who are to be revolutionized or exterminated by the last grand surges of progress all these render a volume dedicated to travel and discovery especially in the realm of The Dark Continent surprisingly agreeable and useful at this time How like enchantment is the story of that revelation which the New America furnished the Old World What a spirit of inquiry and exploit it opened How unprecedent and startling adventure of every kind became What thrilling volumes tell of the hardships of daring navigators or of the perils of brave and dash ing landmen Later on who fails to read with the keenest emotion of those dangers trials and escapes which enveloped the intrepid searchers after the icy secrets of the Poles or confronted those who would unfold the tale of the older civiliza tions and of the ocean s island spaces Though the directions of pioneering enterprise change yet more and more man searches for the new To follow him is to write of the wonderful Again to follow him is to read of the surprising and the thrilling No prior history of discovery has ever exceeded in vigorous entertainment and startling interest that which centers in The Dark Continent and has for its most distinguished hero Henry M Stanley His coming and going in the untrodden and hostile wilds of Africa now to rescue the stranded pioneers of other nationalities now to explore the unknown waters of a mighty and unique system now to teach cannibal tribes respect for decency and law and now to map for the first time with any degree of accuracy the limits of new dynasties make up a volume of surpassing moment and peculiar fascination All the world now turns to Africa as the scene of those adventures which possess such a weird and startling interest for readers of every class and which invite to heroic exertion on the part of pioneers It is the one dark mysterious spot strangely made up of massive mountains lofty and extended plateaus salt and sandy deserts immense fertile stretches climates of death and balm spacious lakes gigantic rivers dense forests numerous grotesque and savage peoples and an animal life of fierce mien enormous strength and endless variety It is the country of the marvelous yet none of its marvels exceed its realities And each exploration each pioneering exploit each history of adventure into its mysterious depths but intensifies the world s view of it and enhances human interest in it for it is there the civilized nations are soon to set metes and bounds to their grandest acquisitions perhaps in peace perhaps in war It is there that white colonization shall try its boldest problems It is there that Christianity shall engage in one of its hardest contests
