The Greenland Entomofauna Jens Böcher, N.P. Kristensen (†), Thomas Pape, Lars Vilhelmsen, 2015-05-26 In *The Greenland Entomofauna* an international team of 64 taxonomic specialists provide for the first time a richly illustrated guide to the identification of the 1200 species of Hexapods, Insects, Arachnids and Myriapods so far known to occur in the country. While the composition, origin and adaptations of the Greenland fauna has always been a challenge to biogeographers and ecologists, ecophysiologists, the provision of a tool for detailed identification of its constituent species is now particularly timely since global climate change will expectedly have a particularly noticeable impact on biota at high latitudes. This obviously renders the feasibility of monitoring distributional range shifts of the principal components of this biota a matter of some urgency. The Unexpected Louis St-Laurent Patrice Dutil, 2020-11-01 Much of Canada's modern identity emerged from the innovative social policies and ambitious foreign policy of Louis St-Laurent's Liberal government. His extraordinarily creative administration made decisions that still resonate today on health care, pensions and housing, on infrastructure and intergovernmental issues and further afield in developing Canada's global middle power role in global affairs and resolving the Suez Crisis. Yet St-Laurent remains an enigmatic figure. Contributors to *The Unexpected Louis St-Laurent* assess the degree to which he set the policy agenda. They explore the features of his personality that made him effective or sometimes less so, the changes he wrought on the state apparatus and federal-provincial relations and the substance of his government's policies. This wide-ranging collection fills a great void in Canadian political history, bringing together seasoned professionals and new scholars to investigate the far-reaching influence of a politician whose astute policies and bold resolve moved Canada into the modern era.

Explores vital topics such as the impact on insect biodiversity through habitat loss and degradation and climate change. With its companion Volume I, presents current information on the biodiversity of all insect orders. Contains reviews of insect biodiversity in culture and art in the fossil record and in agricultural systems. Includes scientific approaches and methods for the study of insect biodiversity. The book offers scientists, academics, professionals, and students a guide for a better understanding of the biology and ecology of insects, highlighting the need to sustainably manage ecosystems in an ever-changing global environment.
