Fundamentals of Ceramic Powder Processing and Synthesis Terry A. Ring, 1996-04-30 Ceramic powder synthesis and processing are two of the most important technologies in chemical engineering and the ceramics related area of materials science This book covers both the processing and the synthesis of ceramic powders in great depth and is indeed the only up to date comprehensive source on the subject available The application of modern scientific and engineering methods to the field of ceramic powder synthesis has resulted in much greater control of properties Fundamentals of Ceramic Powder Processing and Synthesis presents examples of these modern methods as they apply to ceramic powders The book is organized to describe the natural and synthetic raw materials that comprise contemporary ceramics It covers the three reactant processes used in synthetic ceramic powder synthesis solid liquid and gas Ceramic powder processing as a field of materials processing is undergoing rapid expansion The present volume is intended as a complete and useful source on this subject of great current interest It provides comprehensive coverage from a strong chemistry and chemical engineering perspective and is especially applicable to materials scientists chemical engineers and applied chemists Key Features The most complete and updated reference source on the subject Comprehensive coverage from a strong chemical engineering and chemistry perspective Emphasis on both natural and synthetic raw materials in ceramic powder synthesis Information on reaction kinetics Superior more comprehensive coverage than that in existing texts Sample problems and exercises Problems at the end of each chapter which supplement the material

Sol-Gel Science C. Jeffrey Brinker, George W. Scherer, 2013-10-22 Sol Gel Science The Physics and Chemistry of Sol Gel Processing presents the physical and chemical principles of the sol gel

process The book emphasizes the science behind sol gel processing with a chapter devoted to applications The first chapter introduces basic terminology provides a brief historical sketch and identifies some excellent texts for background reading Chapters 2 and 3 discuss the mechanisms of hydrolysis and condensation for nonsilicate and silicate systems Chapter 4 deals with stabilization and gelation of sols Chapter 5 reviews theories of gelation and examines the predicted and observed changes in the properties of a sol in the vicinity of the gel point Chapter 6 describes the changes in structure and properties that occur during aging of a gel in its pore liquor or some other liquid The discussion of drying is divided into two parts with the theory concentrated in Chapter 7 and the phenomenology in Chapter 8 The structure of dried gels is explored in Chapter 9 Chapter 10 shows the possibility of using the gel as a substrate for chemical reactions or of modifying the bulk composition of the resulting ceramic by performing a surface reaction such as nitridation on the gel Chapter 11 reviews the theory and practice of sintering describing the mechanisms that govern densification of amorphous and crystalline materials and showing the advantages of avoiding crystallization before sintering is complete The properties of gel derived and conventional ceramics are discussed in Chapter 12 The preparation of films is such an important aspect of sol gel technology that the fundamentals of film formation are treated at length in Chapter 13 Films and other applications are briefly reviewed in Chapter 14 Materials scientists and researchers in the field of sol gel processing will find the book invaluable

Perspectives in Industrial Organization B. Dankbaar, John Groenewegen, H. Schenk, 2012-12-06 This book contains the key note lectures and a selection of papers that were presented at the 15th Conference of the European Association for Research in Industrial Economics EARIE held under the auspices of GRASP at Erasmus University Rotterdam in 1988 plus

an introductory chapter by the Editors Upon suggestions by the Editors all papers have been revised for this book some more extensively than others Robin Marris has added to his lecture a synopsis of the contributions to the Round Table on the Micro Macro Interface which he chaired during the Conference The papers cover issues that seem to be both interesting and relevant for the 1990s While some of the papers are cast in a rather established research frame enabling the use of regular academic routines others are first attempts at delineating the contours of areas that are peripheral to what is often considered as the core of Industrial Organization In their introductory chapter the Editors set forth that a neglect of those areas may well relegate Industrial Organization to social irrelevancy Therefore it is hoped that the book will also contribute to a reflection on the main lines of Industrial Organization research for the 1990s thus helping to create a healthy perspective for this part of economics at a time when macroeconomics is undergoing a severe crisis **High Tech**
