High-Temperature Superconductors-Crystal Chemistry, Processing and Properties: Volume 659 U.

Balachandran, 2001-08-20 Papers from a symposium held in Boston Nov 27 Dec 1 2000 Contributors representing North America Europe and Asia discuss fabrication characterization and phase relations in both first generation bismuth based and second generation yttrium based superconductors Topics include recent progress and status of superconductors processing for high current critical densities understanding current transport processing for development of flux pinning centers phase relations equilibrium processing microstructure relationships and grain boundary properties Annotation copyrighted by Book News Inc Portland OR **Journal of Research of the National Institute of Standards and Technology**, 2005

Processing of High-Temperature Superconductors at High Strain A.G. Mamalis, 2019-04-23 The discovery of high temperature superconductivity 1986 by Bendnorz and Muller in the La Ba Cu O system resulted in very extensive research work about the discovery and synthesis of other high temperature superconductors such as Y BA Cu O and Bi Sr Ca Cu O These new superconducting materials possessing superconductivity above liquid nitrogen *Directory of Published Proceedings*, 2002 **Handbook of Superconducting Materials** David A. Cardwell, David S. Ginley, 2003 With the advent of High Temperature Superconductivity and the increasing reliability of fabrication techniques superconductor technology has moved firmly into the mainstream of academic and industrial research There is currently no single source of practical information giving guidance on which technique to use for any particular category of superconductor An increasing number of materials scientists and electrical engineers require easy access to practical information sensible advice and guidance on best practice and reliable proven fabrication and characterisation techniques The Handbook will be the definitive collection of material describing techniques for the fabrication and analysis of superconducting materials In addition to the descriptions of techniques authoritative discussions written by leading researchers will give guidance on the most appropriate technique for a particular situation Characterisation and measurement techniques will form an important part of the Handbook providing researchers with a standard reference for experimental techniques The tutorial style description of these techniques makes the Handbook particularly suitable for use by graduate students The Handbook will be supported by a comprehensive web site which will be updated with new data as it emerges The Handbook has six main sections Fundamentals of Superconductivity characteristic properties elementary theory critical current of type II superconductors Processing bulk materials wires and tapes thick and thin films contact techniques Characterisation Techniques structure microstructure measurement and interpretation of electromagnetic properties measurement of physics properties Materials characteristic properties of low and high T_c materials Applications high current applications trapped flux devices high frequency devices josephson junction device **Processing of High Temperature Superconductors** Amit Goyal, Winnie Wong-Ng, Masato Murakami, Judith Driscoll, 2012-04-17 Included in this volume are papers on biaxial and triaxial

crystallographic texturing epitaxial growth on biaxially textured substrates melt processing of YBCO and basic information about HTS materials concerning phase diagrams measurement of physical properties characterization and effects of various defects including grain boundaries on supercurrent transmission Proceedings of the symposium held at the 104th Annual Meeting of The American Ceramic Society April 28 May1 2002 in Missouri Ceramic Transactions Volume 140 *Scientific and Technical Aerospace Reports* ,1995 **Energy Research Abstracts** ,1994-10 *Publications of the National Institute of Standards and Technology ...
