High Energy Physics Nuclear Structure:

High Energy Physics and Nuclear Structure P. Catillon, P. Radvanyi, M. Porneuf, 2013-09-03 High Energy Physics and Nuclear Structure covers the proceedings of the Ninth International Conference on High Energy Physics and Nuclear Structure held in Versailles on July 6-10 1981. The book focuses on the processes, reactions, and methodologies involved in high energy physics and nuclear structure. The selection first offers information on experiments on antinucleon-nucleon, baryonium-nucleon, nucleon-nucleon, and dibaryons, and the quark model, pion, and the goldstone pion. Discussions focus on antinucleon-nucleon and baryonium-nucleon, nucleon-nucleon and dibaryon, and spontaneous breaking of chiral symmetry. The text also ponders on quarks and nuclei, multiquark resonant states, and electron scattering from complex nuclei. The publication elaborates on electromagnetic interactions on light nuclei, electromagnetic interactions with nuclei at high momentum transfer, and inelastic electron scattering at low energy. The book also touches on the dynamics of hadron-nucleus interactions, hypernuclei, and interactions of kaons with nuclei, and pion-nucleus scattering theory. The selection is a dependable reference for readers interested in high energy structure and nuclear physics. *High-Energy Physics and Nuclear Structure* S.

Devons, 2012-12-06 In preparing the program for this Conference, the third in the series, it soon became evident that it was not possible to include in a conference of reasonable duration all the topics that might be subsumed under the broad title High Energy Physics and Nuclear Structure. From their initiation in 1963, it has been as much the aim of these Conferences to provide some bridges between the steadily separating domains of particle and nuclear physics as to explore thoroughly the borderline territory between the two, the sort of no man's land that lies unclaimed or claimed by both sides. The past few years have witnessed the rapid development of many new routes connecting the two major areas of elementary particles and nuclear structure, and these now spread over a great expanse of physics, logically perhaps including the whole of both subjects. As recently as 1954, an International Conference on Nuclear and Meson Physics did in fact embrace both fields. Since it is not now possible to traverse in one Conference this whole network of connections, still less to explore the entire territory, it covers the choice of topics has to be in some degree arbitrary. It is hoped that ours has served the purpose of fairly exemplifying many areas where physicists normally separated by their diverse interests can find interesting and important topics which bring them together. **High-Energy Physics and Nuclear Structure** S.
