*High Performance Networks* Ahmed N. Tantawy, 2012-12-06 In the last few years the world of information networks has undergone significant changes that will revolutionize the future of communications Data rates have reached the gigabit per second range Optical fibers have become the transmission medium of choice Standardization activities have very aggressively produced a set of well established standard for future LANs MANs and WANs It has become very difficult for computer and communications professionals to follow these rapidly evolving technologies and standards High Performance Networks Technology and Protocols provides a timely technical overview of the state of the art in high performance networking Chapters cover lightweight protocols high performance protocol implementation techniques high speed MAC protocols optical networks as well as emerging standards including ATM SMDS B ISDN SONET FCS and HIPPI Professionals engineers and researchers in communications and computers who need to understand the underlying technologies of high performance gigabit networks will find this volume to be an invaluable reference The book is also suitable for use as a text for advanced courses on the subject

High Performance Networks Ahmed N. Tantawy, 2012-09-27 The world of information processing is going through a major phase of its evolution Networking has been associated with computers since the 1960 s Communicating machines exchanging information or cooperating to solve complex problems were the dream of many scientists and engineers Rudimentary networks and protocols were invented Local area networks capable of carrying a few megabits per second became basic components of corporate computing installations in the 1980 s At the same time advances in optical transmission and switching technologies made it possible to transfer billions of bits per second The availability of this huge bandwidth is making people wonder about the seemingly unlimited possibilities of these fat information pipes A new world where all interesting up to date information becomes instantaneously available to everyone everywhere is often portrayed to be around the corner New applications are envisioned and their requirements are defined The new field of High Performance Networking is burgeoning with activities at various levels Several frontiers are being explored simultaneously In order to achieve more bandwidth and better performance work is progressing in optical transmission high speed switching and network resource management Some researchers have started to investigate all optical networking as a promising approach to remove the relatively slow electronics from the network infrastructure This will also introduce a new environment with unique characteristics that will have a definite impact on network architectures topologies addressing schemes and protocols

High-Speed Networking James P. G. Sterbenz, Joseph D. Touch, 2002-03-14 Leading authorities deliver the commandments for designing high speed networks There are no end of books touting the virtues of one or another high speed networking technology but until now there were none offering networking professionals a framework for choosing and integrating the best ones for their organization s networking needs Written by two world renowned experts in the field of high speed network design this book outlines a total strategy for designing high bandwidth

low latency systems Using real world implementation examples to illustrate their points the authors cover all aspects of network design including network components network architectures topologies protocols application interactions and more

*Protocols for High Speed Networks IV* G. Neufeld, M. Ito, 2013-11-11 Welcome to the fourth IFIP workshop on protocols for high speed networks in Vancouver This workshop follows three very successful workshops held in Zurich 1989 Palo Alto 1990 and Stockholm 1993 respectively We received a large number of papers in response to our call for contributions This year forty papers were received of which sixteen were presented as full papers and four were presented as poster papers Although we received many excellent papers the program committee decided to keep the number of full presentations low in order to accommodate more discussion in keeping with the format of a workshop Many people have contributed to the success of this workshop including the members of the program committee who with the additional reviewers helped make the selection of the papers We are thankful to all the authors of the papers that were submitted We also thank several organizations which have contributed financially to this workshop specially NSERC ASI CICS R UBC MPR Teltech and Newbridge Networks

,1998 Performance Modelling and Evaluation of ATM Networks Demetres D. Kouvatsos, 2013-04-17 Asynchronous Transfer Mode ATM networks are widely considered to be the new generation of high speed communication systems both for broadband public information highways and for local and wide area private networks ATM is designed to integrate existing and future voice audio image and data services Moreover ATM aims to simplify the complexity of switching and buffer management to optimise intermediate node processing and buffering and to limit transmission delays However to support such diverse services on one integrated communication network it is most essential through careful engineering to achieve a fruitful balance amongst the conflicting requirements of different quality of service constraints ensuring that one service does not have adverse implications on another Over recent years there has been a great deal of progress in research and development of ATM technology but there are still many interesting and important problems to be resolved such as traffic characterisation and control routing and optimisation ATM switching techniques and the provision of quality of service This book presents thirty two research papers both from industry and academia reflecting latest original achievements in the theory and practice of performance modelling of ATM networks worldwide These papers were selected subject to peer review from those submitted as extended and revised versions out of fifty nine shorter papers presented at the Second IFIP Workshop on Performance Modelling and Evaluation of ATM Networks July 4 7 1994 Bradford University At least three referees from the scientific committee and externally were involved in the selection of each paper Forthcoming Books Rose Arny, 1994-02 Object-oriented Network Protocols Stefan Boecking, 2000 This book provides a foundation for the

object oriented design and implementation of modular composable reusable and or extendable network communication protocols Programmers will then be able to implement protocols and services by composing rather than programming them from a set of already specified implemented and tested elementary protocol objects according to the application needs and the network environment The book is organised in three parts fundamentals of networks and applications reference framework for modular communication systems and case studies of system designs and implementations *Supercomputing Frontiers* Rio Yokota, Weigang Wu, 2018-03-20 It constitutes the refereed proceedings of the 4th Asian Supercomputing Conference SCFA 2018 held in Singapore in March 2018 Supercomputing Frontiers will be rebranded as Supercomputing Frontiers Asia SCFA which serves as the technical programme for SCA18 The technical programme for SCA18 consists of four tracks Application Algorithms Libraries Programming System Software Architecture Network Communications Management Data Storage Visualisation The 20 papers presented in this volume were carefully reviewed and selected from 60 submissions **Frontiers of Human-Centered Computing, Online Communities and Virtual Environments** Rae Earnshaw, Richard Guedj, Andries Van Dam, John Vince, 2012-12-06 Rae Earnshaw and John A Vince \_\_ 1 Introduction The US President's Information Technology Advisory Committee PITAC recently advised the US Senate of the strategic importance of investing in IT for the 21st century particularly in the areas of software human computer interaction scalable information infrastructure high end computing and socioeconomic issues 1 Research frontiers of human computer interaction include the desire that interaction be more centered around human needs and capabilities and that the human environment be considered in virtual environments and in other contextual information processing activities The overall goal is to make users more effective in their information or communication tasks by reducing learning times speeding performance lowering error rates facilitating retention and increasing subjective satisfaction Improved designs can dramatically increase effectiveness for users who range from novices to experts and who have diverse cultures with varying educational backgrounds Their lives could be made more satisfying their work safer their learning easier and their health better
