Building High-Tech Clusters Timothy Bresnahan,Alfonso Gambardella,2004-04-05 This book was first published in 2004 National economic growth is fueled by the development of high technology clusters such as Silicon Valley The contributors examine the founding of ten clusters that have been successful at an early stage of growth in information technology Their key finding is that the economics of starting a cluster is very different from the positive feedback loop that sustains an

established cluster While nothing succeeds like success in an established cluster far more difficult risky and unlikely are the initial conditions that give rise to successful clusters The contributors find regularities in the start of the successful clusters studied including Silicon Valley around 1964 These cases contain old economy factors such as competencies firm building capabilities managerial skills and connection to markets more than the flamboyant new economy factors that have been highlighted in prevailing years   Foreign Economic Trends and Their Implications for the United States ,1988

   Explaining Technical Change in a Small Country Synnöve Vuori,Pentti Vuorinen,2013-11-21 Technical change is produced by the interaction of a large number of technical economic social and institutional factors One of the starting points is the concept of national innovation systems The aim of this book is to take Finland as an example illustrating the challenges faced by small countries The characteristics and performance of the Finnish national innovation system of the last couple of decades are analyzed The Finnish experience is put in a broader context by comparing it with a few other countries The development paths possible in the near future are assessed According to the results many problems remain despite favourable developments in several technology indicators The rigidities of the social institutions created during the 1970s and 1980s seem to have become obstacles for economic and technological development There are fairly large differences between the countries studied and even between the culturally and historically close Nordic countries However Finland and Sweden seem to share the same kind of encompassing collective risk sharing systems which may have detrimental effects on for instance incentives related to innovativeness Increasing globalisation requires further development of the national system of innovation Technology policy must be seen as one part of more encompassing social and economic policies and the role of factors such as well functioning institutions appropriate education and sound incentive systems is highly important The papers of this book are written by experts of various research disciplines They reflect the respective views on the issue how technical change in Finland can be explained It is also discussed how Finland fares in comparison to Denmark Sweden Japan and the United States   **United States Customs Service International Accomplishments** U.S. Customs Service,1989

   Database ,1988   **United States Technology Export Control** Douglas E. McDaniel,1993-03-17 This is a broad ranging study of U S strategic export control policy In particular this book analyzes and evaluates the effectiveness of export controls in delaying the acquisition of militarily sensitive high technology by the Soviet Union and its allied states Furthermore the question of whether or not U S economic competitiveness in various high technology sectors has been unduly undermined by export controls is also evaluated Numerous official government studies and reports supplemented by a host of interviews with government officials businesspeople and analysts in the United States and Europe are utilized in drawing conclusions and posting policy recommendations The consequences for export control policy of the revolutionary political upheavals in Eastern Europe and the former U S S R are also addressed The study concludes that the strategic security goal of utilizing controls to hinder and delay the acquisition of militarily significant high technology by the former

Soviet Union and its allied states was generally effective More controversially McDaniel argues that export controls per se have not been a significant determinant of lagging U S competitiveness in high technology However this conclusion is qualified by the observation that while overall trends in U S high technology exports to important trading partners do not suggest that controls by themselves have unduly hurt U S exporters individual sectors and small firms may be disadvantaged Finally the study cautions that U S policy must adapt or risk becoming outmoded and increasingly ineffective This book will be of interest to scholars and students of international relations international political economy and international business
