Higher Dimensional Varieties And Rational Points:

Higher Dimensional Varieties and Rational Points K. Böröczky, János Kollár, Szamuely Tamas, 2003-07-10 Exploring the connections between arithmetic and geometric properties of algebraic varieties has been the object of much fruitful study for a long time especially in the case of curves The aim of the Summer School and Conference on Higher Dimensional Varieties and Rational Points held in Budapest Hungary during September 2001 was to bring together students and experts from the arithmetic and geometric sides of algebraic geometry in order to get a better understanding of the current problems interactions and advances in higher dimension The lecture series and conference lectures assembled in this volume give a comprehensive introduction to students and researchers in algebraic geometry and in related fields to the main ideas of this rapidly developing area

Arithmetic of Higher-Dimensional Algebraic Varieties Bjorn Poonen, Yuri Tschinkel, 2004 One of the great successes of twentieth century mathematics has been the remarkable qualitative understanding of rational and integral points on curves gleaned in part through the theorems of Mordell Weil Siegel and Faltings It has become clear that the study of rational and integral points has deep connections to other branches of mathematics complex algebraic geometry Galois and tale cohomology transcendence theory and diophantine approximation harmonic analysis automorphic forms and analytic number theory This text which focuses on higher dimensional varieties provides precisely such an interdisciplinary view of the subject It is a digest of research and survey papers by leading specialists the book documents current knowledge in higher dimensional arithmetic and gives indications for future research It will be valuable not only to practitioners in the field but to a wide audience of mathematicians and graduate students with an interest in arithmetic geometry Contributors Batyrev V V Broberg N Colliot Th l ne J L Ellenberg J S Gille P Graber T Harari D Harris J Hassett B Heath Brown R Mazur B Peyre E Poonen B Popov O N Raskind W Salberger P Scharaschkin V Shalika J Starr J Swinnerton Dyer P Takloo Bighash R Tschinkel Y Voloch J F Wittenberg O

Rational Points, Rational Curves, and Entire Holomorphic Curves on Projective Varieties Carlo Gasbarri, Steven Lu, Mike Roth, Yuri Tschinkel, 2015-12-22 This volume contains papers from the Short Thematic Program on Rational Points Rational Curves and Entire Holomorphic Curves and Algebraic Varieties held from June 3 28 2013 at the Centre de Recherches Math matiques Universit de Montr al Qu bec Canada The program was dedicated to the study of subtle interconnections between geometric and arithmetic properties of higher dimensional algebraic varieties The main areas of the program were among others proving density of rational points in Zariski or analytic topology on special varieties understanding global geometric properties of rationally connected varieties as well as connections between geometry and algebraic dynamics exploring new geometric techniques in Diophantine approximation This book is co published with the Centre de Recherches Math matiques

Rational Points on Algebraic Varieties Emmanuel Peyre, Yuri Tschinkel, 2001-10-01 This book is devoted to the study of rational and integral points on higher

dimensional algebraic varieties It contains research papers addressing the arithmetic geometry of varieties which are not of general type with an emphasis on how rational points are distributed with respect to the classical Zariski and adelic topologies The book gives a glimpse of the state of the art of this rapidly expanding domain in arithmetic geometry The techniques involve explicit geometric constructions ideas from the minimal model program in algebraic geometry as well as analytic number theory and harmonic analysis on adelic groups In recent years there has been substantial progress in our understanding of the arithmetic of algebraic surfaces Five papers are devoted to cubic surfaces Basile and Fisher study the existence of rational points on certain diagonal cubics Swinnerton Dyer considers weak approximation and Broberg proves upper bounds on the number of rational points on the complement to lines on cubic surfaces Peyre and Tschinkel compare numerical data with conjectures concerning asymptotics of rational points of bounded height on diagonal cubics of rank 2 Kanevsky and Manin investigate the composition of points on cubic surfaces Satge constructs rational curves on certain Kummer surfaces Colliot Thelene studies the Hasse principle for pencils of curves of genus 1 In an appendix to this paper Skorobogatov produces explicit examples of Enriques surfaces with a Zariski dense set of rational points

The Moduli Space of Curves Robert H. Dijkgraaf, Carel Faber, Gerard B.M. van der Geer, 2012-12-06 This generalization of geometry is bound to have wide spread repercussions for mathematics as well as physics The unearthing of it will entail a new golden age in the interaction of mathematics and physics E Witten 1986 The idea that the moduli space M_g of curves of fixed genus g that is the algebraic variety that parametrizes all curves of genus g is an intriguing object in its own right seems to have come slowly Although the parameters or moduli of curves surface in Riemann's famous memoir on abelian functions from 1857 and in work of Hurwitz and later were considered by the geometers of the Italian school for a long time they attracted attention only in the special case $g=1$ where they were studied in the framework of the theory of modular functions The work of Grothendieck who in the early sixties pointed the way towards the right approach and the subsequent construction in 1965 of the moduli space M_g by Mumford were the first foundational work to be followed by the construction of a compactification M_g by Deligne and Mumford in 1969 The theorem of Harris and Mumford saying that for g sufficiently large the space M_g is of general type was the first big insight in its structure

Arithmetic Geometry Clay Mathematics Institute. Summer School, 2009 Based on survey lectures given at the 2006 Clay Summer School on Arithmetic Geometry at the Mathematics Institute of the University of Gottingen this tile is intended for graduate students and recent PhD's It introduces readers to modern techniques and conjectures at the interface of number theory and algebraic geometry

Point-Counting and the Zilber-Pink Conjecture Jonathan Pila, 2022-06-09 Point counting results for sets in real Euclidean space have found remarkable applications to diophantine geometry enabling significant progress on the Andr  Oort and Zilber Pink conjectures The results combine ideas close to transcendence theory with the strong tameness properties of sets that are definable in an o-minimal structure and thus the material treated connects ideas in model theory transcendence theory and arithmetic This

book describes the counting results and their applications along with their model theoretic and transcendence connections. Core results are presented in detail to demonstrate the flexibility of the method while wider developments are described in order to illustrate the breadth of the diophantine conjectures and to highlight key arithmetical ingredients. The underlying ideas are elementary and most of the book can be read with only a basic familiarity with number theory and complex algebraic geometry. It serves as an introduction for postgraduate students and researchers to the main ideas, results, problems and themes of current research in this area.

Geometry and Analysis on Manifolds Takushiro Ochiai, Toshiki Mabuchi, Yoshiaki Maeda, Junjiro Noguchi, Alan Weinstein, 2015-02-25. This volume is dedicated to the memory of Shoshichi Kobayashi and gathers contributions from distinguished researchers working on topics close to his research areas. The book is organized into three parts with the first part presenting an overview of Professor Shoshichi Kobayashi's career. This is followed by two expository course lectures: the second part on recent topics in extremal Kähler metrics and value distribution theory which will be helpful for graduate students in mathematics interested in new topics in complex geometry and complex analysis. Lastly, the third part of the volume collects authoritative research papers on differential geometry and complex analysis. Professor Shoshichi Kobayashi was a recognized international leader in the areas of differential and complex geometry. He contributed crucial ideas that are still considered fundamental in these fields. The book will be of interest to researchers in the fields of differential geometry, complex geometry and several complex variables geometry as well as to graduate students in mathematics.

Cohomological and Geometric Approaches to Rationality Problems Fedor Bogomolov, Yuri Tschinkel, 2009-11-03. Rationality problems link algebra to geometry and the difficulties involved depend on the transcendence degree of K over k or geometrically on the dimension of the variety A . A major success in 19th century algebraic geometry was a complete solution of the rationality problem in dimensions one and two over algebraically closed ground fields of characteristic zero. Such advances have led to many interdisciplinary applications to algebraic geometry. This comprehensive book consists of surveys of research papers by leading specialists in the field and gives indications for future research in rationality problems. Topics discussed include the rationality of quotient spaces, cohomological invariants of quasi-simple Lie type groups, rationality of the moduli space of curves and rational points on algebraic varieties. This volume is intended for researchers, mathematicians and graduate students interested in algebraic geometry and specifically in rationality problems. Contributors: F. Bogomolov, T. Petrov, Y. Tschinkel, Ch. Böhning, G. Catanese, I. Cheltsov, J. Park, N. Hoffmann, S. J. Hu, M. C. Kang, L. Katzarkov, Y. Prokhorov, A. Pukhlikov.

Analytic Number Theory William Duke, Yuri Tschinkel, 2007. Articles in this volume are based on talks given at the Gauss-Dirichlet Conference held in Göttingen on June 20-24, 2005. The conference commemorated the 150th anniversary of the death of C. F. Gauss and the 200th anniversary of the birth of J. L. Dirichlet. The volume begins with a definitive summary of the life and work of Dirichlet and continues with thirteen papers by leading experts on research topics of current interest in number theory that were directly influenced by Gauss and Dirichlet.

The Millennium Prize Problems James Carlson, Arthur Jaffe, Andrew Wiles, 2023-09-14 On August 8 1900 at the second International Congress of Mathematicians in Paris David Hilbert delivered his famous lecture in which he described twenty three problems that were to play an influential role in mathematical research A century later on May 24 2000 at a meeting at the Collège de France the Clay Mathematics Institute CMI announced the creation of a US 7 million prize fund for the solution of seven important classic problems which have resisted solution The prize fund is divided equally among the seven problems There is no time limit for their solution The Millennium Prize Problems were selected by the founding Scientific Advisory Board of CMI Alain Connes Arthur Jaffe Andrew Wiles and Edward Witten after consulting with other leading mathematicians Their aim was somewhat different than that of Hilbert not to define new challenges but to record some of the most difficult issues with which mathematicians were struggling at the turn of the second millennium to recognize achievement in mathematics of historical dimension to elevate in the consciousness of the general public the fact that in mathematics the frontier is still open and abounds in important unsolved problems and to emphasize the importance of working towards a solution of the deepest most difficult problems The present volume sets forth the official description of each of the seven problems and the rules governing the prizes It also contains an essay by Jeremy Gray on the history of prize problems in mathematics

Cubic Forms and the Circle Method Tim Browning, 2021-11-19 The Hardy Littlewood circle method was invented over a century ago to study integer solutions to special Diophantine equations but it has since proven to be one of the most successful all purpose tools available to number theorists Not only is it capable of handling remarkably general systems of polynomial equations defined over arbitrary global fields but it can also shed light on the space of rational curves that lie on algebraic varieties This book in which the arithmetic of cubic polynomials takes centre stage is aimed at bringing beginning graduate students into contact with some of the many facets of the circle method both classical and modern This monograph is the winner of the 2021 Ferran Sunyer i Balaguer Prize a prestigious award for books of expository nature presenting the latest developments in an active area of research in mathematics
