2015 in honor of Gert Martin Greuel s 70th birthday This unique volume presents a collection of recent original research by some of the leading figures in singularity theory on a broad range of topics including topological and algebraic aspects classification problems deformation theory and resolution of singularities At the same time the articles highlight a variety of techniques ranging from theoretical methods to practical tools from computer algebra Greuel himself made major contributions to the development of both singularity theory and computer algebra With Gerhard Pfister and Hans Sch nemann he developed the computer algebra system SINGULAR which has since become the computational tool of choice for many singularity theorists The book addresses researchers whose work involves singularity theory and computer algebra from the PhD to expert level *Superschool on Derived Categories and D-branes* Matthew Ballard,Charles Doran,David Favero,Eric Sharpe,2018-08-21 This book consists of a series of introductory lectures on mirror symmetry and its surrounding topics These lectures were provided by participants in the PIMS Superschool for Derived Categories and D branes in July 2016 Together they form a comprehensive introduction to the field that integrates perspectives from mathematicians and physicists alike These proceedings provide a pleasant and broad introduction into modern research topics surrounding string theory and mirror symmetry that is approachable to readers new to the subjects These topics include constructions of various mirror pairs approaches to mirror symmetry connections to homological algebra and physical motivations Of particular interest is the connection between GLSMs D branes birational geometry and derived categories which is explained both from a physical and mathematical perspective The introductory lectures provided herein highlight many features of this emerging field and give concrete connections between the physics and the math Mathematical readers will come away with a broader perspective on this field and a bit of physical intuition while physicists will gain an introductory overview of the developing mathematical realization of physical predictions **Recent Progress in Intersection Theory** Geir Ellingsrud,William Fulton,Angelo Vistoli,2012-12-06 The articles in this volume are an outgrowth of an International Confer ence in Intersection Theory that took place in Bologna Italy December 1997 In a somewhat unorthodox format aimed at both the mathematical community as well as summer school students talks were research oriented as well as partly expository There were four series of expository talks by the following people M Brion University of Grenoble on Equivariant Chow groups and applications H Flenner University of Bochum on Joins and intersections E M Friedlander Northwestern University on Intersection products for spaces of algebraic cycles R Laterveer University of Strasbourg on Bigraded Chow co homology Four introductory papers cover the following topics and bring the reader to the forefront of research 1 the excess intersection algorithm of Stuckrad and Vogel combined with the deformation to the normal cone together with many of its geo metric applications 2 new and very important homotopy theory techniques that are now used in intersection theory 3 the Bloch Beilinson filtration and the theory of motives 4 algebraic stacks the modern language of moduli theory Other research articles concern such active fields as stable maps and Gromov Witten

invariants deformation theory of complex varieties and others Organizers of the conference were Rudiger Achilles Mirella Manaresi and Angelo Vistoli all from the University of Bologna the scientific com mittee consisted of Geir Ellingsrud University of Oslo William Fulton University of Michigan at Ann Arbor and Angelo Vistoli The conference was financed by the European Union contract no   Recent Developments in Algebraic Geometry Hamid Abban,Gavin Brown,Alexander Kasprzyk,Shigefumi Mori,2022-11-03 Written in celebration of Miles Reid s 70th birthday this illuminating volume contains 11 papers by leading mathematicians in and around algebraic geometry broadly related to the themes and interests of Reid s varied career Just as in Reid s own scientific output some of the papers give comprehensive accounts of the state of the art of foundational matters while others give expositions of subject areas or techniques in concrete terms Reid has been one of the major expositors of algebraic geometry and a great influence on many in this field this book hopes to inspire a new generation of graduate students and researchers in his tradition   **Elliptic Curves** Dale Husemöller,2006-06-06 There are three new appendices one by Stefan Theisen on the role of Calabi Yau manifolds in string theory and one by Otto Forster on the use of elliptic curves in computing theory and coding theory In the third appendix we discuss the role of elliptic curves in homotopy theory In these three introductions the reader can get a clue to the far reaching implications of the theory of elliptic curves in mathematical sciences During the nal production of this edition the ICM 2002 manuscript of Mike Hopkins became available This report outlines the role of elliptic curves in ho topy theory Elliptic curves appear in the form of the Weierstasse equation and its related changes of variable The equations and the changes of variable are coded in an algebraic structure called a Hopf algebroid and this Hopf algebroid is related to a cohomology theory called topological modular forms Hopkins and his coworkers have used this theory in several directions one being the explanation of elements in stable homotopy up to degree 60 In the third appendix we explain how what we described in Chapter 3 leads to the Weierstrass Hopf algebroid making a link with Hopkins paper   *Birationally Rigid Varieties* Aleksandr V. Pukhlikov,2013-05-15 Birational rigidity is a striking and mysterious phenomenon in higher dimensional algebraic geometry It turns out that certain natural families of algebraic varieties for example three dimensional quartics belong to the same classification type as the   **A Celebration of Algebraic Geometry** Brendan Hassett,James McKernan,Jason Starr,Ravi Vakil,2013-09-11 This volume resulted from the conference A Celebration of Algebraic Geometry which was held at Harvard University from August 25 28 2011 in honor of Joe Harris 60th birthday Harris is famous around the world for his lively textbooks and enthusiastic teaching as well as for his seminal research contributions The articles are written in this spirit clear original engaging enlivened by examples and accessible to young mathematicians The articles in this volume focus on the moduli space of curves and more general varieties commutative algebra invariant theory enumerative geometry both classical and modern rationally connected and Fano varieties Hodge theory and abelian varieties and Calabi Yau and hyperk hler manifolds Taken together they present a comprehensive view of the long frontier of current knowledge in algebraic geometry Titles in this

series are co published with the Clay Mathematics Institute Cambridge MA   **European Women in Mathematics** Emilia Mezzetti,2003 This volume can be divided into two parts a purely mathematical part with contributions on finance mathematics interactions between geometry and physics and different areas of mathematics another part on the popularization of mathematics and the situation of women in mathematics   *The Arithmetic and Geometry of Algebraic Cycles* B. Brent Gordon,2000 The NATO ASI CRM Summer School at Banff offered a unique full and in depth account of the topic ranging from introductory courses by leading experts to discussions of the latest developments by all participants The papers have been organized into three categories cohomological methods Chow groups and motives and arithmetic methods As a subfield of algebraic geometry the theory of algebraic cycles has gone through various interactions with algebraic K theory Hodge theory arithmetic algebraic geometry number theory and topology These interactions have led to developments such as a description of Chow groups in terms of algebraic K theory the application of the Merkurjev Suslin theorem to the arithmetic Abel Jacobi mapping progress on the celebrated conjectures of Hodge and of Tate which compute cycles classgroups respectively in terms of Hodge theory or as the invariants of a Galois group action on tale cohomology the conjectures of Bloch and Beilinson which explain the zero or pole of the L function of a variety and interpret the leading non zero coefficient of its Taylor expansion at a criticalpoint in terms of arithmetic and geometric invariant of the variety and its cycle class groups The immense recent progress in the theory of algebraic cycles is based on its many interactions with several other areas of mathematics This conference was the first to focus on both arithmetic and geometric aspects of algebraic cycles It brought together leading experts to speak from their various points of view A unique opportunity was created to explore and view the depth and the breadth of the subject This volume presents the intriguing results
