**Quest for Eye Color Modification** Kambiz Thomas Moazed, 2024-09-02. This book examines the existing modalities of changing the color of the eye with their limitations. There has been no possible way to change the color of the eye with the natural looking result as of today. There have been many years of research and trials due to the immense public desire to be able to change the color of their eyes without success. From topical eye drops and colored contact lenses to the more aggressive treatments such as laser ablation, corneal tattooing, or even iris implants, all have been tried and failed to achieve a natural looking result. This book explains the reason for the failure of each of these approaches without bias and discusses the advantages and disadvantages of each of these modalities. The book will cover the need for new approaches and new equipment and instruments that are necessary to achieve the goal of being able to modify the color of the eye to look natural. Chapters will also explore the scientific theoretical possibilities of achieving the task of eye color modification in hope that future researchers have a blueprint for their studies and experiments to overcome this very difficult task.
