Environmental Problems in the Himalaya Sharad Singh Negi, 1982 *Environmental Sustainability from the Himalayas
to the Oceans* Shikui Dong, Jayanta Bandyopadhyay, Sanjay Chaturvedi, 2017-01-23 The book is written in the backdrop of the
environmental impacts of and future requirements from the natural environment for rapid economic growth that has
characterized recent economic history of China and India especially over the past few decades The environmental impacts of
such rapid economic changes have been more frequently than otherwise degrading in character Environmental impacts of
economic activities create degraded natural ecosystems by over utilization of nature's provisioning ecosystem services from
Himalaya to the Ocean as well by the use of the natural environment as sink for dumping of unmarketable products or
unused inputs of economic activities Such processes affect wide range of ecosystem processes on which the natural
environment including human population depend on Critical perspectives cast by various chapters in this book draw
attention to the various ways in which space and power interact to produce diverse geographies of sustainability in a
globalizing world They also address the questions such as who decides what kind of a spatial arrangement of political power
is needed for sustaining the environment Who stands to gain or lose what when where and why from certain geographical
areas being demarcated as ecologically unique fragile and vulnerable environments Whose needs and values are being
catered to by a given ecosystem service What is the scope for critical inquiry into the ways in which the environment is
imagined represented and resisted in both geopolitical struggles and everyday life The book provides insights to both
academics from diverse disciplines and policy makers civil society actors interested in mutual exchange of knowledge
between China and India Geoenvironmental Hazards in Himalaya Bindhy Wasini Pandey, 2002 Environmental
Concerns and Sustainable Development Sakarama Somayaji, Ganesha Somayaji, 2009-01-01 At the dawn of this 21st century
environmental concerns have received utmost attention from all segments of human society The extreme abuse of nature and
ruthless hunt for material happiness are the reasons for post enlightenment destruction of the environment Many consider
the issues related to environmental degradation as an environmental crisis During the last century humans have been
exploiting nature not merely for need but also for greed Environmentally concerned individuals call for immediate action to
stop being greedy and act positively In India too this environmental awareness is fast spreading and the Honourable
Supreme Court of India has directed the Central and state governments to introduce courses regarding environmental issues
at all levels of education This book is a compilation of research results pertaining to development environment and

sustainable development in the form of articles

Mining in the Himalayas A.K. Soni, 2016-09-19 Himalaya the world's most prominent mountain system of the world is a source of sustenance for the social cultural and economic development of population across different countries Unscientific small scale mining for harnessing resources including minerals has caused ecosystem damage Therefore an integrated and holistic approach to deal with the resource management is required This book makes a focussed effort to explain how mining in the Himalaya is practiced with discussions pertaining to critiques and lacunas of mining and environmental practices Status of mining practices in Himalaya is included along with the legal environmental repercussions of mining

Mining Impacts and their Environmental Problems José Marrugo Negrete, M. P. Jonathan, A.L. Ramanathan, S. Chidambaram, R. Nagarajan, Pankaj Kumar, 2025-02-12 This book entitled Mining Impacts and their Environmental Problems presents a comprehensive view on various mining activities and a wide spectrum of environmental challenges associated with it Case studies presented across global south such as Asia Africa and Latin America are the first of its kind which presents a holistic and deep insight into instead of about about this pressing environmental issue In this book thirteen chapters present various issues ranging from gold silver chromium lead coal mining and its impacts on ambient environmental soil water biodiversity degradation and ultimately on healthy living environment instead of human health living human health living in the surrounding area For this purpose different methodologies have been used they have used different methodologies for example instead of like using like using a water quality index hydro chemical characterization numerical simulation to identify the extent of pollution caused by instead of due to due to mining activities Later in the book it advocates the usage of advanced mining technologies such as advanced oxidation processes decarbonization technologies and a biotechnological approach for the treatment of wastewater being generated due to mining activities or minimizing overall environmental degradation Finally it emphasizes on assessing risk zone delineation vulnerability analysis using cutting edge tools like numerical simulation GIS and remote sensing which will help designing robust management plans and sustainable transitions critically helpful for policy makers or decision makers

Ecology and Environment in the Himalayas Kuldeep Singh Gulia, 2007 Today environment and ecology are the buzzwords The pace of development and modernization has endangered the ecological balance of Himalaya When the British brought railways in India in the late 18th century the Himalayan jungles were denuded of the vast forests covers due to the demand for sleepers When in early 19th century the Britishers attempted to curb wanton tree felling there arose resentment among the people of Garhwal and Kumaon in Uttarakhand But in later times those very women folk took to Chipko movement to curb tree felling The book gives a multitude of ill effects of tree felling ranging from soil erosion to

causing floods in the plains and depositing silt The shrinking of various Himalayan glaciers has also created alarm among the global ecologists and environmentalists Denudation of forests also has been causing landslides and endangering the wildlife Now the efforts are being made to avert the man made disaster This book comes to grips with the magnitude of problem in the entire Himalayan region **Himalayas, Ecology and Environment** S. Jeffrey Leonard, 1989-01-01 This volume one of the ODC's U S Third World Policy Perspectives series offers useful steps for policymakers concerned with the critical challenges of integrating environment and development concerns Jessica Tuchman Matthews World Resources Institute Six out of every ten of the world's people are being inexorably pushed by agricultural modernization and continuing high population growth rates into ecologically vulnerable environments tropical forests dryland and hilly areas and the fringes of great urban centers Unless development strategies support their capabilities to ensure their own survival the 470 million people living in these vulnerable areas will be forced to meet their short term need to survive at the cost of long term ecological sustainability and the well being of future generations In response to these startling statistics the authors call for new policies and new forms of collaboration among participants at the local national and international levels They offer practical and stimulating recommendations to bring together population planners water engineers health professionals bankers among others to find solutions to both poverty and environmental problems

Climate Change and Environmental Issues Narayan Singh, Amit

Kumar Thakur, P L Sharma, Pankaj Sharma, 2016-06-01 Climate change is one of the greatest challenges of the 21st century. Climate is changing across our planet largely as a result of human activities. The indicators of climate change include physical responses such as changes in the surface temperature, atmospheric water vapour, severe climatic events, melting of glaciers, and a rise in sea level. Mountain ecosystems, being exceptionally fragile, are prone to both natural and anthropogenic drivers of change, which range from volcanic and seismic events and flooding to global climate change and of vegetation and soils resulting from inappropriate agricultural and forestry practices and extractive industries. Environmental issues directly affect agricultural productivity, famine, and pandemics, health, economy, and ecology. In this light, environmental protection, the practice of protecting the environment on individual, community, organizational, or governmental level, assumes a significant role. This book provides a holistic coverage of the basics of climate change, changes in biodiversity, phytosociological changes, and thus proposes a comprehensive set of solutions to resolve various issues related to environment and climate change. This book would be beneficial for researchers, policy makers, academicians, environmentalists, and university students.
