## **Hippocampus As A Cognitive Map:**

*The Hippocampus as a Cognitive Map* John O'Keefe, Lynn Nadel, 1978      *The Construction of Cognitive Maps* Juval Portugali, 2007-08-23 and processes which are exclusive to humans in their encoding storing decoding and retrieving spatial knowledge for various tasks The authors present and discuss connectionist models of cognitive maps which are based on local representation versus models which are based on distributed representation as well as connectionist models concerning language and spatial relations As is well known Gibson's 1979 ecological approach suggests a view on cognition which is diametrically different from the classical main stream view perception and thus cognition is direct immediate and needs no internal information processing and is thus essentially an external process of interaction between an organism and its external environment The chapter by Harry Heft introduces J J Gibson's ecological approach and its implication to the construction of cognitive maps in general and to the issue of wayfinding in particular According to Heft main stream cognitive sciences are essentially Cartesian in nature and have not as yet internalized the implications of Darwin's theory of evolution Gibson in his ecological approach has tried to do exactly this The author introduces the basic terminology of the ecological approach and relates its various notions in particular optic flow nested hierarchy and affordances to navigation and the way routes and places in the environment are learned      **Beyond the Cognitive Map** A. David Redish, 1999 There are currently two major theories about the role of the hippocampus a distinctive structure in the back of the temporal lobe One says that it stores a cognitive map the other that it is a key locus for the temporary storage of episodic memories A David Redish takes the approach that understanding the role of the hippocampus in space will make it possible to address its role in less easily quantifiable areas such as memory Basing his investigation on the study of rodent navigation one of the primary domains for understanding information processing in the brain he places the hippocampus in its anatomical context as part of a greater functional system Redish draws on the extensive experimental and theoretical work of the last 100 years to paint a coherent picture of rodent navigation His presentation encompasses multiple levels of analysis from single unit recording results to behavioral tasks to computational modeling From this foundation he proposes a novel understanding of the role of the hippocampus in rodents that can shed light on the role of the hippocampus in primates explaining data from primate studies and human neurology The book will be of interest not only to neuroscientists and psychologists but also to researchers in computer science robotics artificial intelligence and artificial life      *Hippocampal Place Fields* Sheri J.Y. Mizumori, 2008-02-26 Data from neuropsychological and animal research suggest that the hippocampus plays a pivotal role in two relatively different areas active navigation as well as episodic learning and memory Recent studies have attempted to bridge these disparate accounts of hippocampal function by emphasizing the role that hippocampal place cells may play in processing the spatial contextual information that defines situations in which learned behaviors occur A number of established laboratories are currently offering complementary interpretations of place fields and this book will present the

first common platform for them Bringing together research from behavioral genetic physiological computational and neural systems perspectives will provide a thorough understanding of the extent to which studying place field properties has informed our understanding of the neural mechanisms of hippocampus dependent memory Hippocampal Place Fields Relevance to Learning and Memory will serve as a valuable reference for everyone interested in hippocampal function

### **Space,Time and Memory in the Hippocampal**

**Formation** Dori Derdikman,James J. Knierim,2014-07-08 The discovery of new cell types such as grid and time cells in the hippocampus has been accompanied by major anatomical and theoretical insights in the recent years This book provides comprehensive up to date information about the hippocampal formation and especially the neural basis of episodic memory spatial location the formation of the cognitive map and temporal representation The first part of the book describes the information flow from pre hippocampal areas into the hippocampus the second part discusses the different types of hippocampal processing and finally the third part depicts the influence that the hippocampal processing has on other brain structures that are perhaps more closely tied to explicit cognitive or behavioral output This book is intended for neuroscientists especially for those who are involved in research on the hippocampus as well as for behavioral scientists and neurologists

**Human Spatial Navigation** Arne Ekstrom,Hugo J. Spiers,Véronique D. Bohbot,R. Shayna Rosenbaum,2018-08-07 The first book to comprehensively explore the cognitive foundations of human spatial navigation Humans possess a range of navigation and orientation abilities from the ordinary to the extraordinary All of us must move from one location to the next following habitual routes and avoiding getting lost While there is more to learn about how the brain underlies our ability to navigate neuroscience and psychology have begun to converge on some important answers In Human Spatial Navigation four leading experts tackle fundamental and unique issues to produce the first book length investigation into this subject Opening with the vivid story of Puluwat sailors who navigate in the open ocean with no mechanical aids the authors begin by dissecting the behavioral basis of human spatial navigation They then focus on its neural basis describing neural recordings brain imaging experiments and patient studies Recent advances give unprecedented insights into what is known about the cognitive map and the neural systems that facilitate navigation The authors discuss how aging and diseases can impede navigation and they introduce cutting edge network models that show how the brain can act as a highly integrated system underlying spatial navigation Throughout the authors touch on fascinating examples of able navigators from the Inuit of northern Canada to London taxi drivers and they provide a critical lens into previous navigation research which has primarily focused on other species such as rodents An ideal book for students and researchers seeking an accessible introduction to this important topic Human Spatial Navigation offers a rich look into spatial memory and the neuroscientific foundations for how we make our way in the world

Arbib, Peter R. Erdi, János Szentágothai, 1998 In *Neural Organization* Arbib Erdi and Szentágothai integrate structural functional and dynamical approaches to the interaction of brain models and neurobiological experiments Both structure based bottom up and function based top down models offer coherent concepts by which to evaluate the experimental data The goal of this book is to point out the advantages of a multidisciplinary multistrategied approach to the brain Part I of *Neural Organization* provides a detailed introduction to each of the three areas of structure function and dynamics Structure refers to the anatomical aspects of the brain and the relations between different brain regions Function refers to skills and behaviors which are explained by means of functional schemas and biologically based neural networks Dynamics refers to the use of a mathematical framework to analyze the temporal change of neural activities and synaptic connectivities that underlie brain development and plasticity in terms of both detailed single cell models and large scale network models In part II the authors show how their systematic approach can be used to analyze specific parts of the nervous system the olfactory system hippocampus thalamus cerebral cortex cerebellum and basal ganglia as well as to integrate data from the study of brain regions functional models and the dynamics of neural networks In conclusion they offer a plan for the use of their methods in the development of cognitive neuroscience
