Yakovlev, Nikolaj M. Yanev, 2013-03-08 A mathematician who has taken the romantic decision to devote himself to biology will doubtlessly look upon cell kinetics as the most simple and natural field of application for his knowledge and skills Indeed the thesaurus he is to master is not so complicated as say in molecular biology the structural elements of the system i e cells have been segregated by Nature itself simple considerations of balance may be used for deducing basic equations and numerous analogies in other areas of science also superficial add to ones confidence Generally speaking this number of impression is correct as evidenced by the very great theoretical studies on population kinetics unmatched in other branches of mathematical biology This however does not mean that mathematical theory of cell systems has traversed in its development a pathway free of difficulties or errors The seeming ease of formalizing the phenomena of cell kinetics not infrequently led to the appearance of mathematical models lacking in adequacy or effectiveness from the viewpoint of applications As in any other domain of science mathematical theory of cell systems has its own intrinsic logic of development which however depends in large measure on the progress in experimental biology Thus during a fairly long period running into decades activities in that sphere were centered on devising its own specific approaches necessitated by new objectives in the experimental in vivo and in vitro investigation of cell population kinetics in different tissues **KINETICS OF CELLULAR PROLIFERATION- CONFERENCE ON FUNDAMENTAL PROBLEMS AND TECHNIQS FOR THE STUDY OF THE KINETICS OF CELLULAR PROLIFERATION- PAPERS- NATIONAL INSTITUTES OF HEALTH, DIVISION OF RESEARCH GRANTS, HEMATOLOGY STUDY SECTION. , KINETICS OF CELLULAR PROLIFERATION IN NORMAL AND MALIGNANT TISSUES. , 1972** *The Kinetics of Cellular Proliferation in the Bursa of Fabricius* Eva Rubin, 1971 Normal and Malignant Cell Growth R. survival specifically that of stem cells to the survival of the irradiated test animal One result of the experiment shows a rapid migration of a number of stem cells from shielded marrow into unshielded marrow at the pressure of a rapid circulating pool The numbers of stem cells are somewhat dependent on the dose given to the unshielded marrow and are greater with the greater dose Another paper also investigates the four methods that are used in the study of cellular kinetics in human tumors This compendium can prove helpful for biochemists micro biologists cellular researchers and academicians involved in the study of cellular biology physiology or oncology **Journal of the National Cancer Institute** ,1977 Cancer Treatment Reports ,1978 *Haemopoiesis* G.
