Walton, 2012-12-06 The monitoring of point sources by the Environmental Protection Agency EPA the states and the tribes has documented and helped reduce the levels of chemical stressors affecting our ecosystems With the controls on point sources reducing chemical contamination new environmental challenges associated with nonpoint sources have emerged To adequately deal with these new problems EPA s Office of Research and Development recognized the need to develop an overall understanding of the condition of our ecological resources the trends in their condition and the stressors affecting these systems on a broad scale Toward this end the Environmental Monitoring and Assessment Program EMAP was established by EPA and has been strategically developing the scientific tools and techniques to monitor and assess the status and trends of aquatic ecosystems EMAP scientists have developed new indicators and probability based designs to fill data gaps in the development of regional scale assessments of our aquatic resources as required in the Clean Water Act We have a scientifically defensible approach that allows 100 percent coverage of the aquatic resources within broad geographic areas and the formulation of reference conditions for establishing the health of these resources The use of these indicators and designs were successfully demonstrated in the landscapes streams and estuaries of the mid Atlantic states as part of the Mid Atlantic Integrated Assessment MAIA

Low Dose Exposures in the Environment C. Streffer, H. Bolt, D. Follesdal, P. Hall, J. G. Hengstler, P. Jacob, D. Oughton, K. Prieß, E. Rehbinder, E. Swaton, 2013-11-11 The ever increasing release of harmful agents due to human activities have led in some areas of the world to heavy pollution In order to protect human health and the environment environmental standards that shall limit the release and the concentration of those toxic agents in the environment and hence the exposure to it have to be established The related assessment and decision making procedures have to be based on solid scientific data about the effects and mechanisms of these agents as well as on ethical social and economic aspects For risk evaluation the knowledge of the dose response curve is an essential prerequisite Dose responses without a threshold dose are most critical in this connection Such dose responses are assumed for mutagenic and carcinogenic effects which therefore dominate also the discussion in this book In the environmentally important low dose range risk estimation can only be achieved by extrapolation from higher doses with measurable effects The extrapolation is accompanied with uncertainties which makes risk evaluation as well as risk communication frequently problematic In order to ensure rational efficient and fair decisions beyond a sound scientific assessment the dialogue between disciplines with the affected people and with the general public is necessary In this book the whole range of relevant and essential aspects of risk evaluation and standard setting is addressed Starting with the ethical foundations the sound analysis of recent scientific findings sets the frame for further reflections by theory of cognition psychosocial sciences and jurisprudence The authors end up with concluding recommendations for coping with the recent problems of standard setting in the field of environmentally relevant low doses The book is designed to a readership of scientists legislators

**Comparative Risk Assessment and Environmental Decision Making** Igor Linkov, Abou Bakr Ramadan, 2006-03-02 Decision making in environmental projects is typically a complex and confusing process characterized by trade offs between socio political environmental and economic impacts Comparative Risk Assessment CRA is a methodology applied to facilitate decision making when various activities compete for limited resources CRA has become an increasingly accepted research tool and has helped to characterize environmental profiles and priorities on the regional and national level CRA may be considered as part of the more general but as yet quite academic field of multi criteria decision

analysis MCDA Considerable research in the area of MCDA has made available methods for applying scientific decision theoretical approaches to multi criteria problems but its applications especially in environmental areas are still limited The papers show that the use of comparative risk assessment can provide the scientific basis for environmentally sound and cost efficient policies strategies and solutions to our environmental challenges *Environmental Taxation Law* John Snape,Jeremy de Souza,2016-05-06 The theoretical arguments for environmental taxes and other types of economic instruments for environmental protection have been discussed extensively in the literature Rather less well discussed has been the extremely complex form that such instruments have in fact taken in practice *Environmental Taxation Law Policy Contexts and Practice* examines the legal implications of introducing environmental taxes and other economic instruments into the regulatory framework of UK law In doing so it analyzes and explains the difficulties of grafting environmental taxes onto the complexities of existing regulatory structures not all of which of course were originally devised with environmental considerations in mind Although the focus of the book is the UK s pioneering implementation of a web of distinct yet interrelated policy measures it locates the UK s taxes and instruments not simply in their broader context of market and environmental regulation but also in the contexts of European and international law **Spatial Navigation: Memory Mechanisms and Executive Function Interactions** Thackery I.
