Finding And Fixing Vulnerabilities In Information Systems The Vulnerability Assessment And Mitigation Methodology:

Finding and Fixing Vulnerabilities in Information Systems Philip S. Anton, Robert H. Anderson, Richard Mesic, Michael Scheiarn, 2004-02-09 Understanding an organization's reliance on information systems and how to mitigate the vulnerabilities of these systems can be an intimidating challenge especially when considering less well known weaknesses or even unknown vulnerabilities that have not yet been exploited The authors introduce the Vulnerability Assessment and Mitigation methodology a six step process that uses a top down approach to protect against future threats and system failures while mitigating current and past threats and weaknesses **Web Information Systems Engineering - WISE 2008 Workshops** Sven Hartmann, Xiaofang Zhou, Markus Kirchberg, 2008-08-20 This book constitutes the joint refereed proceedings of three workshops held in conjunction with the 9th International Conference on Web Information Systems Engineering WISE 2008 in Auckland New Zealand September 2008 The 16 revised full papers presented were carefully reviewed and selected from 40 submissions for presentation in the following workshops The First International Workshop on Web Information Systems Engineering for Electronic Businesses and Governments E BAG 2008 The Second International Workshop on Web Usability and Accessibility IWWUA 2008 and The First International Workshop on Mashups Enterprise Mashups and Lightweight Composition on the Web MEM and LCW 2008 National Cyber Summit (NCS) Research Track 2020 Kim-Kwang Raymond Choo, Tommy Morris, Gilbert L. Peterson, Eric Imsand, 2020-09-08 This book presents findings from the papers accepted at the Cyber Security Education Stream and Cyber Security Technology Stream of The National Cyber Summit's Research Track reporting on the latest advances on topics ranging from software security to cyber attack detection and modelling to the use of machine learning in cyber security to legislation and policy to surveying of small businesses to cyber competition and so on Understanding the latest capabilities in cyber security ensures that users and organizations are best prepared for potential negative events This book is of interest to cyber security researchers educators and practitioners as well as students seeking to learn about cyber security Cyberdeterrence and Cyberwar Martin C. Libicki, 2009 The protection of cyberspace the information medium has become a vital national interest because of its importance both to the economy and to military power An attacker may tamper with networks to steal information for the money or to disrupt operations Future wars are likely to be carried out in part or perhaps entirely in cyberspace It might therefore seem obvious that maneuvering in cyberspace is like maneuvering in other media but nothing would be more misleading Cyberspace has its own laws for instance it is easy to hide identities and difficult to predict or even understand battle damage and attacks deplete themselves quickly Cyberwar is nothing so much as the manipulation of ambiguity The author explores these in detail and uses the results to address such issues as the pros and cons of counterattack the value of deterrence and vigilance and other actions the United States and the U S Air Force can take to protect itself in the face of

deliberate cyberattack Publisher description Computer Network Security Vladimir Gorodetsky,2005-09-12 This book constitutes the refereed proceedings of the Third International Workshop on Mathematical Methods Models and Architectures for Computer Network Security MMM ACNS 2005 held in St Petersburg Russia in September 2005 The 25 revised full papers and 12 revised short papers presented together with 5 invited papers were carefully reviewed and selected from a total of 85 submissions The papers are organized in topical sections on mathematical models architectures and protocols for computer network security authentication authorization and access control information flow analysis covert channels and trust management security policy and operating system security threat modeling vulnerability assessment and network forensics and intrusion detection Software Engineering Shari Lawrence Pfleeger,Joanne M. Atlee,2010 Featuring an associated Web page and consistently combining theory with real world practical applications this text includes thought provoking questions about legal and ethical issues in software engineering *Selected Rand Abstracts* Rand Corporation,2003 Includes publications previously listed in the supplements to the Index of selected publications of the Rand Corporation Oct 1962 Feb 1963 Computer Network Security ,2005 **Air Force Cyber Command (provisional)** **Decision Support** Rich Mesic,2010 Because cyberspace can affect core missions and capabilities it seems obvious that the Air Force should take steps to establish an organization to address this medium The details have been difficult to establish however because this medium is very different from air and space The Air Force initially instituted a provisional major command and but has since instead replaced it with a numbered air force the 24th Air Force under Space Command The authors have been involved in efforts to make the missions tasks and capabilities of such a command more concrete Here they offer observations originally intended for the major command but that apply equally well to the efforts of 24th Air Force the needs to articulate objectives clearly establish strategies missions and tasks and develop people capable of ensuring that USAF specific needs are met The Air Force must also consider that cyber related responsibilities spread across the military and other government agencies But to expand its mission to beta fly and fight in cyberspace gamma the Air Force should also advance the state of the art in creating effects using cyberspace The British National Bibliography Arthur James Wells,2004 **Emerging Technologies in Digital Manufacturing and Smart Factories** Hassan, Ahdi,Dutta, Pushan Kumar,Gupta, Subir,Mattar, Ebrahim,Singh, Satya,2023-12-29 Rapid digital transformation is forcing the manufacturing industry to drastically alter its current trajectory for future success The remarkable convergence of digitalization and manufacturing is reshaping industries ushering in an era known as Industry 5 0 This revolutionary transition has given birth to digital manufacturing and smart factories heralding a new dawn in the way we produce goods The amalgamation of artificial intelligence AI robotics the internet of things IoT augmented reality AR virtual reality VR big data analytics cloud computing and additive manufacturing stands poised to unlock unprecedented avenues in the realm of production Practitioners researchers dreamers and pioneers all are beckoned to explore the uncharted territories of digital innovation in
