Finishing in Architecture Paul Emmons, Marcia Feuerstein, Negar Goljan, 2025-06-30 Finishing in Architecture Polishing Completing Ending explores the topic of finishing and the fascinating physical and metaphysical implications of its various conceptions in architecture Finishing is essential to all human practices and concepts of time yet simultaneously it is largely impossible to identify an entirely finished state of being As mortals we organize our worlds into

beginnings and endings starts and finishes Architecture's temporality however may contain something of both the mortal and immortal within it a desire for permanence combined with lamentation over its impossibility While many approaches to finishing construct two opposed ontological conditions the finished and the unfinished this dualistic ploy neglects the complexity of architectural practice cultural reception and historiographic shifts in semiotics during the lifetime of a building More nuanced approaches are examined in this collection of 38 essays and creative works from a diverse group of scholars architects and artists who conceptualize finishing not simply as a final outcome but as an extended action a mood that presumes an end is near all the while working continuously toward but never achieving completion It is here that the concept of finishing is not a state of being but a state of becoming as an active thickening of time when the end is thought to be imminent but not yet attained Finishing more than a final endpoint is a void state that is extended through efforts framing its territory while never quite containing it From the material to the procedural and the conceptual this volume explores the practices of finishing in architecture within three currents surfaces projects and most broadly architectural times It will be of interest to students and instructors of architecture and design architectural historians and other scholars
