Self-Similar Groups Volodymyr Nekrashevych,2024-04-05 Self similar groups groups generated by automata appeared initially as examples of groups that are easy to define but that enjoy exotic properties like nontrivial torsion intermediate growth etc The book studies the self similarity phenomenon in group theory and shows its intimate relation with dynamical systems and more classical self similar structures such as fractals Julia sets and self affine tilings The relation is established through the notions of the iterated monodromy group and the limit space which are the central topics of the book A wide variety of examples and different applications of self similar groups to dynamical systems and vice versa are discussed It is shown in particular how Julia sets can be reconstructed from the respective iterated monodromy groups and that groups with exotic properties appear now not just as isolated examples but as naturally defined

iterated monodromy groups of rational functions The book is intended to be accessible to a wide mathematical readership including graduate students interested in group theory and dynamical systems
