Land-Ocean Systems in the Siberian Arctic Heidemarie Kassens, Henning A. Bauch, Igor A. Dmitrenko, Hajo Eicken, Hans-Wolfgang Hubberten, Martin Melles, Jörn Thiede, Leonid A. Timokhov, 2012-12-06 The Arctic and its surrounding marginal seas are considered some of the most sensitive elements of the global environment which may respond rapidly to climate change However due to various reasons our knowledge of the processes which drive the Arctic system today and in the past is still relatively sparse Based on a multidisciplinary approach German and Russian scientists describe in this book the natural paleorecords and modern data which were collected over the past 6 years These marine and terrestrial datasets provide important new insights into the causes impacts and feedback mechanisms of this extreme Arctic environment

Desolate Landscapes John F. Hoffecker, 2002 John F Hoffecker provides an overview of Pleistocene or Ice Age settlement in Eastern Europe with a heavy focus on the adaptations of Neanderthals and modern humans to this harsh environmental setting Hoffecker argues that the Eastern European record reveals a stark contrast between Neanderthals and modern humans with respect to technology and social organization both of which are tied to the development of language and the use of symbols *Desolate Landscapes* will bring readers up to date with the rich archaeological record in this significant region and its contribution to our understanding of one of our most important events in human evolution the rise of modern humans and the extinction of the

Neanderthals Impact of the Environment on Human Migration in Eurasia E. M. Scott, Andrey Yu. Alekseev, Ganna Zaitseva, 2006-02-25 This book is a collection of the articles presented at the NATO Advanced Research Workshop ARW 979859 held in St Petersburg from the 15-18 November 2003 in the Hermitage Museum. The title of the workshop was 'The impact of the environment on Human Migration in Eurasia'. More than 40 scientists from Russia, Ukraine, Kazakhstan, Poland, Germany, Switzerland, The Netherlands, United Kingdom, Belgium, Finland, Lithuania and Latvia took part. The themes of the workshop focused on the origin, development, interactions and migrations of prehistoric and ancient populations, specifically the Scythians in Eurasia and their relationships with the environment of the time. The discussion of these questions necessitated the participation of specialists from a wide range of academic fields. Beyond any doubt, the environment played an important role in the life of ancient nomadic populations, forming the basis of their economies and influencing various aspects of their mode of life. In this respect, the collaboration of specialists in the Humanities and Science is essential for the solution of scientific questions concerning these peoples. Over the past few years, a large amount of new proxy data related to environmental changes during the Pleistocene and the Holocene and their impact on human life has become available. Our discussion was predominantly limited to environmental changes related to the Holocene. In this period of about 10,000 years, the main focus was on the 1st millennium BC.

Prehistoric Ukraine Malcolm C. Lillie, Inna D. Potekhina, 2020-09-30 This volume covers the Prehistory of Ukraine from the Lower Palaeolithic through to the end of the Neolithic periods. This is the first comprehensive synthesis of Ukrainian Prehistory from earliest times through until the Neolithic Period, undertaken by researchers who are currently investigating the Prehistory of Ukraine. At present, there are no other English language books on this subject that provide a current synthesis for these periods. The chapters in this volume provide up-to-date overviews of all aspects of prehistoric culture development in Ukraine and present details of the key sites and finds for the periods studied. The book includes the most recent research from all areas of prehistory up to the Neolithic period and, in addition, areas such as recent radiocarbon dating and its implications for culture chronology are considered, as is a consideration of aDNA and the new insights into culture history this area of research affords, alongside recent macrofossil studies of plant use and anthropological and stable isotope studies of diet, which all combine to allow greater insights into the nature of human subsistence and cultural developments across the Palaeolithic to Neolithic periods in Ukraine. It is anticipated that this book will be an invaluable resource for students of prehistory throughout Europe in providing an English language text that is written by researchers who are active in their respective fields and who possess an intimate knowledge of Ukrainian prehistory.

Third Millennium BC Climate Change and Old World Collapse H. Nüzhet Dalfes, George Kukla, Harvey Weiss, 2013-06-29 Around 4,000 years ago, the advanced urban civilizations in Egypt, Mesopotamia and India suddenly collapsed. What happened? Did a prolonged drought cause the breakdown of social order? Recent discoveries from all over the world strongly support the suspected link of the collapse with climate. The volume presents the findings of more than

40 researchers and provides a review on the relevant information. It appears that a major shift of the precipitation pattern affected many parts of the world at approximately the same time with disastrous effects on the nomadic populations of Asia, Africa and Eastern Europe. Can a similar climate shift with a serious adverse impact on society happen again? In a world facing global warming, there could be many lessons to be learned from the experiences of ancient societies.

Changes in Land Use and Land Cover William B. Meyer, Billie Lee Turner, University Corporation for Atmospheric Research. Office for Interdisciplinary Earth Studies, 1994-09-15. This book analyses the impact of human activities on the Earth's surface and environment.

Frozen in Time Michael Oard, 2004. Earth's past is littered with the mysterious and unexplained: the pyramids, Easter Island, Stonehenge, dinosaurs, and the list goes on and on as science looks for clues to decipher these puzzles. One such mystery surrounds the now extinct creature called the woolly mammoth. Author and meteorologist Michael Oard has studied the mammoth and its equally mysterious time period, the Ice Age, for many years and has come to some fascinating conclusions to help lift the fog engulfing the facts. Some of the questions he addresses include: What would cause the summer temperatures of the northern United States and Europe to plummet more than 50 degrees Fahrenheit? Why did mammoths become extinct across the entire earth at the same time as many other large mammals? Why are the mammoth carcasses found generally in standing positions? How could large lakes exist in what are today very dry, desert-like places? What was the source of the abnormal moisture necessary for heavy snow? What caused the cold summer temperatures and heavy snowfall to persist for hundreds of years? In logical progression, many other Ice Age topics are explained, including super Ice Age floods, ice cores, man in the Ice Age, and the number of ice ages. This is one of the most difficult eras in geological history for a uniformitarian scientist, one who believes the earth evolved by slow processes over millions of years to explain simply because long ages of evolution cannot explain it. Provided here are plausible explanations of the seemingly unsolvable mysteries about the Ice Age and the woolly mammoths.

Frozen in Time **Permafrost Response on Economic Development, Environmental Security and Natural Resources** R. Paepe, Vladimir P. Melnikov, 2012-12-06. Unlike connotations such as greenhouse effect, global change, sea level, desertification, etc., permafrost is definitely lacking in the everyday speech of many non-specialists. The reason is that areas of permafrost are too remote, barren, and isolated. Focus on permafrost today is brought when huge environmental disasters, mainly related to pollution by oil spills, occur. Even then it is offered as

The Physical Geography of Northern Eurasia Maria Shahgedanova, 2003. This is the third volume in The Oxford Regional Environments series. The series volumes are devoted to major regions of the world, each presenting a detailed and up-to-date body of scientific knowledge concerning a particular region. For most topics on the physical geography of Northern Eurasia, abundant literature now exists. Most of it, however, is in Russian and other East European languages, and this has significantly limited the number of potential readers. This volume seeks to familiarize, at an international level, those with an interest in this area with the most significant achievements in classical and current

geographical research The Physical Geography of Northern Eurasia covers most of the territory of the former USSR The first section discusses the individual components of the physical environment These chapters cut across regional boundaries and treat the area discussed as a whole A regional analysis follows mainly in the context of geographical zonation though a number of specific regions are given individual treatment The concluding chapters discuss the effects of anthropogenic activities on the physical environment The approach is an integrative one tying together various aspects of the physical environments with the environmental implications of human activities Every component of the environment is treated as a step in the development of the multi faceted landscapes which in turn provide possibilities and limitations for cultural and economic usage

The Northern Pleistocene of Russia Valery I. Astakhov, 2020-05-28 This collection of papers devoted to the Ice Age of northern Russia provides illustrated descriptions of landforms and sediments revealing former ice sheets of the arctic shelf that inundated northern Russia It shows that a peculiar Siberian type of inland glaciation is inferred from preserved Ice Age features This type of glacial environment implies arrested landscape evolution in continental climates with fossil glacial ice surviving within the conservative permafrost The contributions here delve into the problem of the size and age of the last glaciation intensely discussed in the international literature This is of broad interest because its solution is paramount for global climatic models and the reconstruction of Circum Arctic paleoenvironments It is also essential for understanding natural conditions of early human migration into the Arctic Another point of interest is the book's discussion of the profound impact of reconstructed glaciers on the tectonic structure and distribution of petroleum reserves

The Geology of Mars Mary Chapman, 2007-05-17 Interpretations of the geological processes operating on Mars are based on our knowledge of processes occurring on Earth This 2007 book presents contributions from leading planetary geologists to demonstrate the parallels and differences between these two planets and will therefore be a key reference for students and researchers of planetary science

Emergence and Diversity of Modern Human Behavior in Paleolithic Asia Yousuke Kaifu, Masami Izuhara, Ted Goebel, Hiroyuki Sato, Akira Ono, 2015-02-15 Despite the obvious geographic importance of eastern Asia in human migration its discussion in the context of the emergence and dispersal of modern humans has been rare Emergence and Diversity of Modern Human Behavior in Paleolithic Asia focuses long overdue scholarly attention on this understudied area of the world Arising from a 2011 symposium sponsored by the National Museum of Nature and Science in Tokyo this book gathers the work of archaeologists from the Pacific Rim of Asia Australia and North America to address the relative lack of attention given to the emergence of modern human behavior as manifested in Asia during the worldwide dispersal from Africa

Archaeobotanical studies of past plant cultivation in northern Europe Santeri Vanhanen, Per Lagerås, 2021-06-09 Plant cultivation has a long and successful history that is tightly linked to environmental and climate change social development and to cultural traditions and diversity This is true also for the high latitudes of northern Europe where cultivation started thousands of years before the earliest written records The long history of cultivation can be studied

by archaeobotany which is the study of ancient seeds pollen and other plant remains found on archaeological sites This book presents recent advances in North European archaeobotany It focuses on plant cultivation and brings together studies from different countries and research environments both at universities and within contract archaeology The studies cover the Nordic countries and adjacent parts of the Baltic countries and Russia and they span more than 5 000 years of agricultural history from the Neolithic to the Middle Ages They highlight and discuss many different aspects of early agriculture from the first introduction of cultivation to crop choices expansions and declines climatic adaptation and vegetable gardening
