Edge Effects:

Edge Effects Robert D. Temple, 2008-11 There's something fascinating about border towns Who hasn't crossed the line into another state to buy fireworks gamble or even to get married Here are border towns with names as unique as the places themselves names that bridge the boundaries Robert D Temple brings you a quirky fascinating and wholly entertaining look at more than eighty North American border towns in Edge Effects With an adventurer's heart and a historian's keen eye Temple explores life on the edge and how these places have made their place in history There's big city Mexicali and empty quarter Idavada idyllic Vir Mar Beach and whiskey soaked Mondak Then there's prairie bleak Alsask mountain high Wyocolo and palmy Florala And who could forget Texarkana Along with finding these towns in the first place comes adventure in exploring them by highway four wheel drive boots and kayak and in encountering memorable locals historians farmers waitresses cops forest rangers railroaders and ne'er do wells But even more these places lead us to investigate concepts of borders boundaries frontiers margins and marginality as well as survey lines battle lines picket lines and color lines Edge Effects brilliantly examines how frontiers enrich cultures and boundaries define them But more importantly it reveals how edges shape local history and our lives Current Ornithology Val Nolan Jr., Ellen D. Ketterson, Charles F.

Thompson, 2013-06-29 Current Ornithology publishes authoritative up to date scholarly reviews of topics selected from the full range of current research in avian biology Topics cover the spectrum from the molecular level of organization to population biology and community ecology The series seeks especially to review 1 fields in which an abundant recent literature will benefit from synthesis and organization or 2 newly emerging fields that are gaining recognition as the result of recent discoveries or shifts in perspective or 3 fields in which students of vertebrates may benefit from comparisons of birds with other classes All chapters are invited and authors are chosen for their leadership in the subjects under review **The**

Howard W. Stone, 1969 Habitat Fragmentation and Landscape Change David B. Lindenmayer, Joern Fischer, 2013-02-22 Habitat loss and degradation that comes as a result of human activity is the single biggest threat to biodiversity in the world today Habitat Fragmentation and Landscape Change is a groundbreaking work that brings together a wealth of information from a wide range of sources to define the ecological problems caused by landscape change and to highlight the relationships among landscape change habitat fragmentation and biodiversity conservation The book synthesizes a large body of information from the scientific literature considers key theoretical principles for examining and predicting effects examines the range of effects that can arise explores ways of mitigating impacts reviews approaches to studying the problem discusses knowledge gaps and future areas for research and management Habitat Fragmentation and Landscape Change offers a unique mix of theoretical and practical information outlining general principles and approaches and illustrating those principles with case studies from around the world It represents a definitive overview and synthesis on the full range of

topics that fall under the widely used but often vaguely defined term habitat fragmentation **Forest Fragmentation**

James Arthur Rochelle, Leslie A. Lehmann, Joe Wisniewski, 1999-01-01 The book contains 15 chapters and provides an overview and synthesis of forest fragmentation and its influences on key ecological processes and vertebrate productivity Land use practices and their effects on vertebrate populations and productivity are discussed and examples of several planning approaches to address landscape level management effects are described *Sustainable Agriculture* John

Mason, 2003 Explains the concepts and long term benefits of sustainable farming systems **Edge Effects** Chris Anderson, 1993-11 Buying his dream house several years ago on the forest s edge near Corvallis Oregon essayist Chris Anderson hoped to find the joys of rural living Despite interminable Mr Blandings experiences he lived embowered by 12 000 acres of seemingly endless fir trees But not for long The McDonald Dunn Forest was about to become the site of a disturbing research project Little did Anderson know when he bought his house that in addition to studying the ecological effects of clear cutting the researchers wanted to see how urban fringe dwellers might be affected too The shock of that harvest compelled the essays in this vibrant graceful record of the relationship between the forest and Anderson s life on its boundary *Large-Scale Landscape Experiments* David Lindenmayer, 2009-03-05 An overview of relationships between

landscape change habitat fragmentation and biodiversity conservation using key lessons from the Tumut Fragmentation Study **Managing and Designing Landscapes for Conservation** David B. Lindenmayer, Richard J. Hobbs, 2008-04-15 The distinctive relationships between landscape change habitat fragmentation and biodiversity conservation are highlighted in this original and useful guide to the theory and practice of ecological landscape design Using original ecologically based landscape design principles the text underscores current thinking in landscape management and conservation It offers a blend of theoretical and practical information that is illustrated with case studies drawn from across the globe Key insights by some of the world s leading experts in landscape ecology and conservation biology make Managing and Designing Landscapes for Conservation an essential volume for anyone involved in landscape management natural resource planning or biodiversity conservation Ecology of Fragmented Landscapes Sharon K. Collinge, 2009-06 Ask airline passengers what

they see as they gaze out the window and they will describe a fragmented landscape a patchwork of desert woodlands farmlands and developed neighborhoods Once contiguous forests are now subdivided tallgrass prairies that extended for thousands of miles are now crisscrossed by highways and byways Whether the result of naturally occurring environmental changes or the product of seemingly unchecked human development fractured lands significantly impact the planet s biological diversity In Ecology of Fragmented Landscapes Sharon K Collinge defines fragmentation explains its various causes and suggests ways that we can put our lands back together Researchers have been studying the ecological effects of dismantling nature for decades In this book Collinge evaluates this body of research expertly synthesizing all that is known about the ecology of fragmented landscapes Expanding on the traditional coverage of this topic Collinge also discusses

disease ecology restoration conservation and planning Not since Richard T T Forman s classic Land Mosaics has there been a more comprehensive examination of landscape fragmentation Ecology of Fragmented Landscapes is critical reading for ecologists conservation biologists and students alike **Ecological Principles of Nature Conservation I.**

Hansson,2012-12-06 This volume is the first in a series entitled Conservation Ecology Principles Practices and Management a theme which Elsevier s pioneering journal Biological Conservation has promoted since its foundation thirty three years ago The science of conservation ecology is now widely acknowledged as an essential component in the planning and development of activities which change or modify our natural environment Nevertheless in spite of much research and publicity there is still a wide gap between theory and practice Today it is especially important to try to bridge this gap by interpreting the results of ecological research so that they are understandable and relevant to a wide range of land managers agriculturalists foresters and those working in the many categories of protected areas The volumes in this series are designed to fulfil this purpose and also to play an important educational role for students of the environmental sciences in schools universities and other institutions *Voluminous States* Franck Billé,2020-07-24 From the Arctic to the South China Sea states are vying to secure sovereign rights over vast maritime stretches undersea continental plates shifting ice flows airspace and the subsoil Conceiving of sovereign space as volume rather than area the contributors to *Voluminous States* explore how such a conception reveals and underscores the three dimensional nature of modern territorial governance In case studies ranging from the United States Europe and the Himalayas to Hong Kong Korea and Bangladesh the contributors outline how states are using airspace surveillance maritime patrols and subterranean monitoring to gain and exercise sovereignty over three dimensional space Whether examining how militaries are digging tunnels to create new theaters of operations the impacts of climate change on borders or the relation between borders and nonhuman ecologies they demonstrate that a three dimensional approach to studying borders is imperative for gaining a fuller understanding of sovereignty Contributors Debora Battaglia Franck Bill Wayne Chambliss Jason Cons Hilary Cunningham Scharper Klaus Dodds Elizabeth Cullen Dunn Gast n Gordillo Sarah Green Tina Harris Caroline Humphrey Marcel LaFlamme Lisa Sang Mi Min Aihwa Ong Clancy Wilmott Jerry Zee *The Vanishing Edens: Unraveling Biodiversity's Fate in Disrupted Forests* Neva Donovan, In the realm of nature s intricate web forests stand as majestic tapestries harboring a realm of wonders unseen Yet as civilization expands its boundless horizons these once vast expanses of green are being torn apart giving birth to fragmented forests With each fallen tree a symphony of life is disrupted forever altering the delicate balance that sustains the rich tapestry of biodiversity Within the pages of this enlightening tome we delve into the intricate dance between ecosystems and the myriad life forms that dwell within them Illuminating the consequential effects of habitat fragmentation this book serves as a ruthless spotlight upon the timeless harmony now dying Step into the world of organisms large and small to grasp the magnitude of the crisis at hand Our journey begins by unraveling the captivating ways in which species

interact within their habitat interwoven threads that build the very foundation of their existence Witness their remarkable adaptations their intriguing behaviors and the symbiotic relationships that add beauty and resilience to life s tapestry As the forest s edges retreat we stand on the brink of witnessing profound evolutionary shifts The once bountiful resources shrink leading to scarcity and competition Venture deeper into the darkened forest and discover the hidden consequences echoing behind the veil of fragmentation Explore the ripples of loss as entire communities disappear leaving behind fragmented whispers of what once was Drawing from the deepest reservoirs of scientific knowledge this exploration leaves no stone unturned Peer into the lives of specialists struggling to find their place amidst the chaos and witness the long lasting effects on genetics population dynamics and ultimately survival Fall into the rabbit hole traversing the labyrinthine corridors of how habitat loss impacts the fragile balance between predator and prey as food chains become unraveled However not all is void of hope In the final chapters glimpse the resilient spirit of species battling to adapt finding hope amidst the fragments Hear stories of conservation movements fighting tirelessly to halt the disintegration of habitats and regenerate overlooked corridors See the forest s shards slowly reconnect woven back together to restore the vitality that once coursed through its veins Part lamentation part call to action this profound exploration serves as a testament to the irreplaceable beauty that teems within our forests Harnessing the steadfast power of scientific analysis it beckons us to recognize the dire consequences of habitat fragmentation and loss As pages turn and knowledge unfolds a plea emerges to protect the fragmented forests that shape our world and in doing so save the limitless wonders they contain
